Department of Labour

Functions of the Department of Labour

The Department of Labour of Canada has functioned for forty-seven years as the agency of the Federal Government charged with the administration of labour legislation. During the war the Department's activities were widely expanded. The functions of the principal branches of the Department and agencies associated with it are:—

Industrial Relations.—Under the direction of the Wartime Labour Relations Board (National), the Industrial Relations Branch is charged with the administration of the Wartime Labour Relations Regulations, P.C. 1003, which provide for the certification of employees' bargaining representation and the establishment of Boards of Conciliation for the settlement of disputes.

The Branch also administers the Conciliation and Labour Act, Chap. 110, R.S.C., 1927, which empowers the Minister of Labour to inquire into the causes and circumstances of a dispute and take measures considered expedient to effect a settlement. For the purpose of administering the Act, the Department maintains a staff of Industrial Relations Officers at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, and Sydney. The office of the Director of Industrial Relations is located in Ottawa.

The administration of the Fair Wages and Hours of Labour Act, 1935, and Order in Council P.C. 7679 governing the application of minimum rates of pay to all employees of Government contractors and subcontractors, are also administered by the Industrial Relations Branch.

Wartime Labour Relations Board (National).—This Board, together with Provincial Labour Relations Boards, administers the Wartime Labour Relations Regulations, P.C. 1003.

Statistics and Research.—The collection and publication of statistics of employment, wages, hours, strikes and lockouts, industrial agreements, and labour organization; the conduct of industrial relations and labour conditions; the collection and publication of information on these subjects.

Labour Gazette.—The monthly publication of the labour-industrial situation throughout the Dominion. The Gazette provides a review of the labour situation.

Legislation.—Analysis and publication of labour laws in Canada and abroad.

Canadian Vocational Training.—The administration of the Vocational Training Act, 1940. Provincial co-operation include: training of apprentices; retraining of foremen and supervisors; training of students.

Dominion Government Annuities.—The administration of the Government Annuities Act, Chap. 7, R.S.C., 1927, whereby provision may be made for old age by the purchase of annuities by individuals, or associations on behalf of their members or by employers on behalf of their employees.

Unemployment Insurance Commission.—The Commission administers the Unemployment Insurance Act, 1940, which provides for a national unemployment insurance system and employment service.

National Employment Service.—Authorized by the Unemployment Insurance Act, 1940, and operated by the Unemployment Insurance Commission, under the direction of the Minister of Labour.

Wartime Bureau of Technical Personnel.—The bureau organizes the placement of scientific and technical engineering personnel for war industries and the government service.

Industrial Production Co-operation Board.—Encourages the formation of labour-management production committees in Canadian industry through the use of a field staff and informational material.

Library.—The maintenance of a library of publications on labour and economic subjects.

International Labour Organization.—The collection and transmission of information in connection with the work of the International Labour Conference and Office, including related correspondence with Federal and Provincial Government Departments and with organizations of employers and employees.

Notes of Current Interest

Minister of Labour on high level of employment in Canada

Hon. Humphrey Mitchell, Minister of Labour.

The Minister reported that at the end of March, 1947, about 4,565,100 persons were employed in Canada and by the end of May unplaced applicants registered with the National Employment Service totalled only 127,500—30,000 fewer than at the beginning of the month and about 88,000 fewer than at the same time in 1946.

Mr. Mitchell stated that during the early part of March, when the full effects of the seasonal lull in employment are usually felt, only three per cent of the total civilian labour force was out of work as compared with about five per cent during the same period in 1946. At the same time, the Minister pointed out, during the lowest post-war point in employment which occurred in March, 1946, the total employment figure was still 40 per cent higher than the 1939 average.

The Minister said, "Unemployment is rapidly dropping to the level where the unemployed group is made up of persons temporarily out of work while changing jobs, or through occupational or vocational immobility. This is consistent with a situation of full employment."

Mr. Mitchell said the outlook for the remainder of 1947 suggested a continuation

of high employment. The large employers of Canada have indicated that they intend to increase their employment during 1947. Employment forecasts in manufacturing industries have indicated an increase of 5.7 per cent by October 1, as compared with employment at February 1. This rise in terms of actual workers represents about 60,000 jobs.

In 1946, the construction industry completed about 60,000 homes. This year it is planning to complete 80,000. Last year investments in durable physical assets were about eleven hundred million dollars (\$1,100,000,000). This year business enterprises forecast that investments will reach approximately seventeen hundred million (\$1,700,000,000). Mr. Mitchell also pointed out that the overall supply of materials was much better this year with physical reconversion completed. Exports reached a value of five hundred and ninety-seven million dollars (\$597,000,000) during the first quarter of 1947 as against five hundred and twenty million (\$520,000,000) for the same period in 1946.

Agreement makes employees liable for illegal strikes

A unique collective agreement which provides for personal responsibility of individual employees for damages suffered by the employer as a result of an illegal or sympathy strike has been concluded between M. D. Muttart Ltd., an Edmonton lumber firm and its 90 employees, members of Local 4, Amalgamated Building and Construction Workers Union (CCL).

In a clause prohibiting strikes or lockouts during the currency of the agreement, each employee, by virtue of his signing the agreement, pledges himself not to take part, join in, or support any illegal or sympathy strike or breach of contract and engages his personal liability in damages in the event of violation. The relatively small number of workpeople involved permits this collective agreement to embody individual contracts.

It is mutually agreed that determination of illegality shall remain outside the competence of the parties and that an illegal strike shall be one so defined by Provincial or Dominion statutes or regulations.

Under the terms of the agreement the Company can, however, sue any individual employees for damages, physical or otherwise, arising from actions contrary to their signed pledges.

The agreement also provides for voluntary revocable check-off of union dues, and for arbitration of grievances. Signing the agreement were the Company, the president, secretary and business agent of the Union, members of the bargaining committee and all the employees.

Increase in farm wage rates

Scarcity of labour and the maintenance of a high level of farm income pushed the May wage rates for farm workers to their highest

level since comparable statistics became available in 1940, according to figures released recently by the Dominion Bureau of Statistics. With the month of August usually marking the high point for farm wages in any year, it is significant that current May wages in many provinces were approximately the same as those prevailing at August 15, 1946.

Except in the case of monthly wages with board, British Columbia led the Dominion, rates in Prince Edward Island being lowest. The average rates for Canada as reported at May 15 were \$3.59 per day and \$77.01 per month where the employer provided the board as compared with rates of \$3.25 and \$71.36, respectively at the same date a year ago. Where the employee provided his own board, the average rates were \$4.55 per day and \$103.96 per month, respectively, as against \$4.15 and \$96.27 at May 15, 1946.

Employment and Industrial Statistics

The accompanying table contains the latest available statistics reflecting industrial conditions in

Canada. Figures are shown for certain months in the current year as compared with the corresponding period in 1946.

Business activity continued at a high level in May according to available indicators. The upward trend movement in wholesale prices which became more rapid as controls were removed continued during the month. Employment was down somewhat from the previous month but was still higher than for any May in the record. Per capita weekly earnings, reflecting increases in wages and high employment, were at the highest level since the record was begun in 1941. Railway traffic as indicated by car loadings was also heavy.

Employment and Earnings.—The index of industrial employment, calculated by the Dominion Bureau of Statistics, stood at 179.7 at May 1, as compared with 180.7 at April 1 and 169.3 at May 1, 1946. The slight recession in the index for May in comparison with the previous month was largely the result of seasonal curtailment in logging operations, which more than offset increased employment in manufacturing, mining, communications, transportation, construction, hotels and restaurants, and certain other industries. Based on the 1926 average as 100, the index of 179.7 at May 1 was nevertheless the highest in the record for that date.

Reports from 17,612 employers showed combined staffs of 1,848,688 persons, a decrease of 10,818 from the total reported by the same firms at the beginning of April. The recession was 0.6 per cent and was accompanied by a decline of 0.1 per cent in the reported payrolls, from \$66,444,608 at April 1 to \$66,379,999 at May 1. The weekly average per employee at the date under review was \$35.91, as compared with \$35.73 in the previous month. Per capita figures at May 1 in earlier years were: 1946, \$32.05; 1945, \$32.53; 1944, \$32.26; 1943, \$30.59 and 1942, \$28.59.

Prices.—The general index of wholesale prices, based on the 1926 average as 100, was 125.3 in May as compared with 122.9 in April and 109.0 in May, 1946. The index of wood products advanced 7.2 points from 153.8 in April to 161.0 in May, due to increased prices for cedar lumber, ground-wood pulp and fir lumber. The index of animal products rose from 124.5 in April to 128.0 in May reflecting higher prices for butter, canned milk, eggs and live stock, partially offset by decreased prices for raw furs and canned lobster. The index of chemical products was unchanged at 103.9 while the indexes of iron products and vegetable products advanced respectively from 133.5 to 133.7 and 110.6 to 111.4. A decrease in the price of silver was reflected in the index of non-ferrous metals which

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

NOTE.—Much of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

declined from 115.8 in April to 115.1 in May. The index of non-metallic minerals rose 3.1 points, from 108.3 to 111.4, due to higher prices for imported bituminous and western domestic coal, manufactured gas, asbestos covering and millboard. The index of producers' goods rose from 123.6 in April to 125.6 in May while the index of consumers' goods advanced from 110.8 to 112.5. The index of Canadian farm products showed an increase of 1.6 points, from 116.9 to 118.5.

The cost-of-living index, based on average prices for the years 1935 to 1939 as 100, rose a further 1.8 points, from 133.1 on May 1 to 134.9 on June 1. All six of the component groups recorded advances between May 1 and June 1. Foods rose from 154.9 to 157.7 as butter, eggs, potatoes and cabbages showed increases and oranges and lemons were slightly lower. Rentals rose from 115.4 to 117.8, fuel and light from 116.2 to 116.7, clothing from 140.0 to 142.4, home furnishings and services from 138.6 to 139.8 and miscellaneous items from 116.8 to 117.1. Individual items showing increases were men's suits, bedroom suites, studio couches and coal. The advance in the general index since August, 1939, was 33.8 per cent.

Changes in pensions for aged and blind persons

Under an amendment to the Old Age Pensions Act, adopted during the recent session of Parliament, changes are provided in the amounts payable and requirements for aged and blind persons.

Conditional on Dominion-provincial agreement, the Act increases the basic pension by \$5, of which the federal contribution is 75 per cent and the provincial contribution 25 per cent. The maximum federal contribution is thus increased to \$22.50 from its former level of \$18.75, the provincial contribution being raised to \$7.50 from \$6.25 and the total to \$30 from \$25. A province is, however, free to decide what amount of pension it should pay and may provide pensions higher than \$30 a month. In fact a number of provinces have for some time been paying supplemental allowances of \$5 a month or more.

The Act increases the amount of income which a pensioner is permitted to have, inclusive of pension, from \$425 to \$600 in the case of a single person and from \$350 to \$1,080 in the case of a married pensioner. The amounts are also raised in the case of blind pensioners. The eligible age for blind pensioners is reduced from 40 to 21.

Changes are also made in the residence provisions, making these more generous.

In introducing the legislation, the Minister of National Health and Welfare, Honourable

Paul Martin, said that at the end of March, 1947, 209,000 aged persons and 7,000 blind persons were in receipt of pensions and added that the new proposals if adopted in full by all provinces would result in an estimated increase to the pension rolls of between 60,000 and 65,000 additional persons, which would bring 50 per cent of the aged people in Canada under the benefits of the Act. The country would then be spending close to \$100,000,000 a year on old age pensioners and blind persons.

The Minister referred to the proposals that the Dominion Government had made to the provinces in August, 1945, at the time of the Dominion-Provincial Conference, for a program covering national health, public investment and social security (L.G., 1945, p. 1280).

As part of this program the Government had proposed a system whereby it would assume full responsibility for paying pensions to all persons over 70, without any means test, and joint responsibility on the means test basis with the provinces for pensions to persons between the ages of 65 and 69 and to the blind.

These proposals, he said, "are an integral part of the objectives in social security which this Government has set for itself as soon as satisfactory over-all arrangements on social security, fiscal and other matters can be made with the provinces."

Working conditions in pulp and paper and brewery products industries

Information on wage rates, hours of work, overtime, vacations with pay, sick leave, Sunday work, and the number of workers under collective agreement is published beginning on page 988 for the pulp and paper and the brewery products industries.

In previous years the Department of Labour has compiled annual statistics for wage rates and hours of labour; but this is the first time that information on the other working conditions has been published.

Similar information for other industries will appear in future issues of the LABOUR GAZETTE.

Booklet describes work of Canadian Vocational Training

An illustrated booklet entitled *Vocational and Pre-Matriculation Training of Canada's Veterans* was issued recently by the Vocational Training Branch of the Dominion Department of Labour. It is a chronicle of the work of the Canadian Vocational Training Branch carried out in co-operation with the provincial governments, designed to give employers of labour a knowledge of the well-trained personnel that are being made available through the vocational training schools.

The layout, printing, lithography, and binding of the booklet was done by the School of Graphic Arts of the Training and Re-establishment Institute, Toronto. Copies have been sent to employers and to labour leaders. A small edition is being prepared for limited, general circulation. A copy can be obtained from Mr. R. F. Thompson, Director, Canadian Vocational Training, Ottawa.

Progress in rehabilitation of veterans

The Veterans Rehabilitation Act, the legislation covering university and vocational training, awaiting returns allowances, out-of-work benefits and temporary incapacitation grants, provided assistance to a total of 336,698 veterans, with an average grant of \$297 per veteran, during the last fiscal year, the Department of Veterans Affairs announced recently. The greatest assistance was given to the 54,554 veterans taking university training, whose grants averaged \$603 per veteran, for a total of approximately \$32,885,000 in the year. The largest group assisted were the 152,323 who received out-of-work allowances at various times during the year. Average cost was \$154 per veteran, with a total cost of approximately \$23,450,000. These payments worked out to an average of a little less than ten weeks out-of-work allowances per veteran.

The second highest group in number was the group of 83,272 who were assisted while taking vocational training. The average cost per veteran under this heading was \$361, for a total of approximately \$30,060,000. There were 41,565 veterans who received assistance from the Department of Veterans Affairs in the way of awaiting returns grants. This is an allowance paid to veterans who start businesses of their own, go into farming or open professional practices. The average cost per veteran in this group was \$371, for a total of approximately \$13,000,000. The number of those who received allowances while temporarily incapacitated during the year was 4,984, at an average cost of \$70 per veteran, for a total of about \$350,000.

"Records from the universities just coming in show a very large number of the medals and scholarships being won by veteran students," the Minister, Right Hon. Ian Mackenzie, said. "The employment situation is extraordinarily good, and the number of those in receipt of out-of-work allowances is now down to 8,898, the lowest figure since general demobilization commenced. Of the number taken off the out-of-work allowances, only 10 per cent were taken off because their entitlement had expired. Therefore, it may be presumed that the vast majority of veterans are employed."

Veterans urged to complete CVT training

Officials in the Department of Veterans Affairs responsible for supervision of the training of veterans have expressed some concern over a tendency becoming apparent among veterans who have taken comparatively short courses in Canadian Vocational Training institutions to accept employment at high rates of wages, and to neglect to follow normal apprenticeship procedure. The officers explained that with employment conditions exceptionally good in many of the designated trades, veterans with only six months training are able to command wages almost equivalent to those of journeymen.

"This is fine from the veterans' standpoint at the present time," an official said, "but over the long term it may result in considerable hardship. The six months' course in CVT institutions does not give any trainee journeyman status and, while the veteran cannot be blamed for accepting employment at the highest possible wage available, it is, nevertheless, a fact that by foregoing the required apprenticeship which results in a reduced wage during the apprenticeship period, the veteran is jeopardizing his status in the years to come.

"There is also the possibility that provincial legislatures may enact laws which would force all workers in the designated trades, including certain building trades, to obtain a licence before they engage in their craft. If this legislation is passed, it is quite evident that the veterans who complete their apprenticeship in the normal way will be in a much better position than those who reach for the high wages now."

Reinstatement of war veterans by Algoma Steel Corporation

In connection with the reinstatement of their former employees who were members of the Armed Forces during the war, the Algoma Steel Corporation, Limited, of Sault Ste. Marie, Ontario, issued the following memorandum recently:—

"During the war years 2,118 employees left Algoma Steel for service in Canada's armed forces. Sixty-three employees were killed on active service. At April 30, 1947, 1,476 had been reinstated in their former occupations or given alternative employment in other departments. Five hundred and seventy-nine are not returning to the Corporation's employ or are unaccounted for.

"In addition to reinstating its own former employees, in the past 18 months the Corporation has given employment to an additional 469 ex-servicemen, representing 49 per cent of the total hirings in that period.

"Because one department, the Tin Plate Mill, was closed down during the war period and is not now operating, alternative employment had to be found for approximately 130 employees who enlisted from that department. By agreement with Local 2251, United Steelworkers of America, all former employees of this department have been reinstated in other departments with basic seniority over any employee not established in the department when the Tin Mill closed down.

"A few employees returned with physical disabilities attributable to war service. All such employees have been placed in employment suitable to their physical condition.

"Algoma Steel has experienced little difficulty in the placement of ex-service personnel. In some few cases the transition to civilian employment has required individual adjustment of the serviceman to his work. However, with management, superintendents, foremen and employees' bargaining agents actively co-operating, the reinstatement of former employees returning to the Corporation's employ after service in the armed forces has been effected with a high degree of satisfaction to all concerned."

Labour Congresses issue calls for conventions

Both the Trades and Labour Congress of Canada and the Canadian Congress of Labour have issued calls for their annual conventions for 1947.

The Trades and Labour Congress will convene its sixty-second annual convention in the Royal Connaught Hotel, Hamilton, Ontario, on September 24 and will continue their sessions daily until all the business of the convention is completed.

The Canadian Congress of Labour will hold its seventh regular convention in the Royal York Hotel, Toronto, commencing on Monday, the sixth day of October and continuing until its business is concluded.

C. A. L. Murchison appointed unemployment insurance commissioner

Hon. Humphrey Mitchell announced on June 23, the appointment of Mr. C. A. L. Murchison, K.C., of Ottawa, as a member of the Unemployment Insurance Commission.

The new Commissioner fills the vacancy on the Commission left by the resignation of Mr. G. W. Ritchie.

Mr. Murchison has a distinguished record in the service of the Dominion Government since 1941, when he came to Ottawa from Winnipeg to accept a position with the legal

division of the Wartime Prices and Trade Board, later being appointed Supervisor of Legal Offices.

He was transferred to the National War Labour Board in April, 1944, as Executive Assistant in Charge of Reviews and in June, 1945, became secretary of the Board. In October, 1946, Mr. Murchison was appointed chairman of the Board and remained in that position until the Board was disbanded this year.

Previous to 1941, Mr. Murchison practised law in Winnipeg. He was alderman of that city for ten years.

Judge Lindal, Chairman of National Employment Committee

The appointment of Judge W. J. Lindal, of Winnipeg, as Chairman of the National Committee, has been announced by the Unemployment Insurance Commission. His appointment

dates from July 1, 1947.

Judge Lindal has, for some time, been Chairman of the Prairie Regional Employment Committee, appointed by the Commission under the Unemployment Insurance Act.

The Chairmanship of the National Employment Committee, which is Advisory to the Unemployment Insurance Commission on matters pertaining to employment, has been held by Commissioner R. J. Tallon, who took office following the illness of the late Mr. Tom Moore during the summer of 1942. Mr. Tallon was appointed Acting Chairman and has retained that position up to the present time.

The National Employment Committee exercises general direction over five Regional and 67 Local Employment Committees. All are Advisory bodies on employment matters. Local Employment Committees are functioning in every part of the Dominion.

Appointments to U.I.C. Advisory Committee

Hon. Humphrey Mitchell, Minister of Labour, tabled in the House of Commons, on June 23, a copy of Order in Council P.C. 1980 of June 19, 1947, appointing the following persons as members of the unemployment insurance advisory committee, to hold office for a period of five years:

Chairman, Dr. W. A. Mackintosh, Kingston; alternate chairman, Dr. Arthur MacNamara, Ottawa; members: Mr. Percy Bengough, Ottawa, Mr. George Burt, Windsor; Mr. Romeo Vallee, Sherbrooke; Mr. Joseph A. Boivin, Montreal; Mr. James Hunter, Toronto; Mr. William S. Lavers, Halifax.

School for janitors in Montreal

Said to be the first and only one of its kind in Montreal, a bilingual training school for janitors and elevator operators was opened in April by the Service Employees International Union (AFL). According to a report in a recent issue of the *Montreal Standard*, the union, organized in April, 1946, is providing night classes to teach beginners how to wash, wax and dust a building in the easiest and most efficient manner. Two teachers, both former janitors and officials of the union, provide the instruction.

The union is negotiating with the management of certain large buildings in Montreal for higher wage standards, vacations with pay, sick benefit and a closed shop, on behalf of elevator operators, cleaners, watchmen and maintenance men.

Book on Canadian labour movement

Published under the auspices of the Department of Industrial Relations of the School of Social Sciences of Laval University, *Le Mouvement Ouvrier Canadien*, by Jean-Pierre Despres, is a 206-page volume dealing with Canadian labour.

After a treatment of the structure and history of the Canadian labour movement, the author discusses the principles and purposes of Canadian unionism, political action, and international relationships.

The book concludes with a chapter on the future of the Canadian labour movement, in which the author indicates that continuation of the wartime gains of labour, both in membership and prestige, depends on the organizations taking heed of the need for education of their members and for social responsibility.

Lengthy appendices give information on the Canadian labour market, careers in industrial relations, and the post-war programs of the Canadian labour organizations.

The book has a preface by Edouard Montpetit, and is published by Fides, 25 est, rue Saint-Jacques, Montreal 1, at a price of \$1.50.

Winnipeg employers to close for holidays

Notification has been given the Manitoba Labour Board by 50 Winnipeg employers that they intend to suspend operations temporarily in order to provide employees one week's vacation with pay as required by Provincial law (see p. 1020 of this issue). Such a simultaneous shut down, the employers contended, would be less disruptive to annual production than a staggered system of vaca-

tion time. This was particularly emphasized in regard to plants dependent upon the output of others, such as foundries and steel plants.

As the legislation makes the vacation period conditional upon one year's employment, employers are being requested by the Board to report; and to submit to employees concerned, details of the provisions being made for work in the plant such as maintenance, repairs, etc., or payment of partial wages during the period the plant is closed down for those with less than a year's service. Employees dissatisfied with the proposal may appeal to the Board for a review of his case if unable to adjust it with his employers.

New cost- of-living index for Great Britain

Accepting the report of March 25, 1947, from its Cost-of-Living Advisory Committee, the Government of Great Britain has decided to establish a new cost-of-living index. As stated in the May issue of *Labour and Industry in Britain*, a temporary index will be introduced within the next few months. "The wages of some 2,500,000 workers are related to the index, including those in the following industries: building, coal, iron and steel, hosiery, boot and shoe, electrical contracting, civil engineering, furniture and tobacco."

The present British index, in which 1914 prices are set at 100, is based on a typical collection of goods, decided upon after extensive inquiries into quantities of different foods consumed by working-class families, carried out before the first World War. Additions were made for expenditure on house room, clothing, and certain other items.

However, it was observed that spending habits changed considerably in the period between the two World Wars, and it was recognized officially that revision of the index was desirable. Consequently, the Ministry of Labour instituted in 1937-38, detailed inquiries, and obtained budgets from nearly 9,000 representative households. Each household comprised man, wife and three children, drawn from insured manual workers and from non-manual workers with incomes below 96 shillings a week. Agricultural workers were not included. The results of these inquiries demonstrated a rise in the standard of living during the inter-war years and emphasized the need for a revision of the index. The war made it necessary for the Government to keep the index as stable as possible and, by means of subsidies, keep living costs from rising excessively. Consequently, any revision of the index was postponed until the war was over.

It has been suggested that the new permanent index might be differently based from the present one. It is pointed out that "the main alternative to an index based on an unchanging standard of living is an index that measures the movement of retail prices weighted on a basis which is kept continuously up to date". This would necessitate regular inquiries into consumers' expenditure. As it would take some time to formulate the initial basis for such an index, it is announced that weighting based on the 1937-38 inquiries will be used in the meantime.

Coal production in United Kingdom under five-day week

In view of the importance of coal to Britain's industrial recovery, great interest is being displayed in the effect on production of the introduction early in May of the five-day week.

The Minister of Fuel and Power stated on June 3 that when the five-day week came into operation he had hoped to give some assessment of the results about the beginning of June. "However, owing to the first five-day week being affected by the colliery engineers' dispute in Durham and by holidays in Scotland and last week by Whitsun holidays in England, as a result of which production was seriously reduced, it is not practicable to give such an assessment. All that we can say is that in the two weeks of full production the miners have produced practically as much coal in a five-day week as they had previously done in six days. We have yet to see whether in a normal month when the full five-day week is operating this position can be sustained. The position cannot be regarded as unsatisfactory but there is yet no reason for regarding the problem of coal supplies as having been solved."

The following are the figures for the month of May:—

Week ending	Total Coal Production Tons
May 3 (last six-day week).....	4,108,300
May 10	3,752,000
May 17	4,073,500
May 24	4,029,300
May 31 (incl. Whit-Mon.).....	3,019,800

During the second five-day week production was 130,000 tons higher than in the corresponding week in 1946, and absenteeism fell to a point lower than at any time since before the war. The figures for Whitsun week offer an even more favourable comparison with the 2,851,000 tons mined during the same period in 1946.

The Government has set a target for the year 1947 of 200 million tons (L.G., April, 1947, p. 509). Output for the first five months of 1947 was 82·8 million tons, leaving a balance of 117·2 million tons to be made up before the end of the year. This calls for an average weekly production of about 3·9 million tons. Since output is expected to fall during the summer holiday season, it follows that in the autumn and early winter over four million tons a week will be required.

The Parliamentary Secretary to the Minister of Fuel and Coal recently summarized the relation of weekly totals to the Government's target as follows: "If we get 4,000,000 tons a week we are out of 'the red'. If we stop at 3,750,000 we are in a bad way. If we fall to 3,500,000 we face disaster."

Appeal for women workers by British Government

The United Kingdom Government is currently appealing to women to return to employment, as a means of reducing labour shortages.

At the peak of wartime employment, more, than three million women in Britain were working full-time in manufacturing industries, and more than 327,000 were in part-time jobs. By March, 1947, the figures were 2,198,000 in full-time jobs and 215,000 in part-time jobs. One of the main causes for the decline has been the return of married women into the home as demobilization of service personnel progressed.

The *Manchester Guardian* has pointed out that "most women whose economic circumstances require that they should work are already at work. Additional female labour on any large scale must be drawn mainly from married women whose husbands earn enough to keep their families going and who must, therefore, be encouraged to go to work for reasons other than the necessity of earning a living for themselves".

Meals for workers in U.K.

The majority of British factories employing more than 250 workers provide canteens where employees may obtain substantial daily meals for low prices and without coupons, according to a recent report of the United Kingdom Information Office.

In order to encourage communal feeding, and to provide for workers who have no canteens available, centres known as "British Restaurants" were set up throughout the country during the war. The numbers have decreased from the maximum of nearly 2,000, but the restaurants are still popular, and meals cost as little as twenty-seven cents.

Approximately 2,000,000 (about 43 per cent) of the children in Britain receive noon meals in school, a proportion of them free of charge.

Underground miners are one of two classes of the population receiving extra rations of meat, the other class being expectant mothers. All manual workers receive extra rations of bread, as do children and expectant mothers.

High level of employment in Australia

A high level of employment in Australia is indicated by the fact that at the end of April vacancies held by the Commonwealth Employment Service were in excess of 58,000, while at the same date the number of registered disengaged workers was 31,400, according to a press statement by the Minister of Labour and National Service. The numbers receiving financial assistance in respect of unemployment were 9,300 males and 284 females.

A shortage of female labour constituted a major problem in all States. The outstanding shortage was in the clothing and textile occupations, but the demands for labour far exceeded the supply in all women's callings. The tendency to employ men and youths on work normally done by women was showing encouraging results in some instances, but it could not be said to have made any significant contribution to the solution of the problem. In any case employment of males in female occupations merely accentuated the male labour shortage.

During April the Commonwealth Employment Service had referred 28,500 persons to employers, and placements notified totalled 17,200.

Union security in collective agreements in U.S.A.

Approximately 15 million workers were covered by collective bargaining agreements in 1946, an increase of one million over the previous year, according to the Bureau of Labour Statistics, U.S. Department of Labour.

Nearly 70 per cent of manufacturing wage earners, 7.9 million, were covered by collective agreements last year, as against 35 per cent of non-manufacturing employees, 6.9 million.

The number covered by closed shop and union shop agreements increased from 6.2 million for 1945 to 7.4 million in 1946. Workers covered by maintenance of membership provisions, which had increased during the war period, showed a slight decline from 3.9 million in 1945 to 3.6 million last year.

About 6 million workers were covered by some form of check-off provisions in 1946, an

increase of about three-quarters of a million from the 1945 total. In the case of a little over half of these workers deduction of dues was automatic; the others specified check-off of union dues by individual written authorization.

Successful bonus plans reported in U.S.A.

Successful bonus programs, drafted jointly by the union and employer, were reported by United Automobile Workers (CIO) and two employers in Detroit,

according to *Business Week*. An article in the June 21 issue declared that bonus schemes established between the UAW and the Kaiser-Frazer Corporation and Bundy Tubing Co. have been renewed after a year's satisfactory operation.

The Kaiser-Frazer plan sets aside \$5 for every automobile produced and shipped and \$1.25 for each Rotatiller shipped from its agricultural implements department, the fund thus established to be divided amongst the employees on the qualifications that participants must possess a 90 per cent attendance record and have not gone on strike in violation of the contract. Designed by the Company as a curb on absenteeism and wild-cat strikes, the fund plan, the Company believed, had helped accomplish those aims. Last year the fund amounted to \$55,036, shared amongst 2,783 employees; this year, the article stated, the fund has already topped \$250,000.

The scheme at the Bundy Tool Co. was an experimental "Cost Savings-Sharings Plan." Its aim was to boost production and reduce costs and apportion the net gain between management and labour. Procedure in computing savings, was to designate a 16-week period, from October 1, 1945, to January 22, 1946, as a "normal sales base" and ascertain the relation of labour costs to total sales. During the period labour costs averaged about 30 per cent of sales. Thus, when, as a result of increased production, unattended by a proportionate rise in labour costs, the ratio of labour costs to sales falls below 30 per cent, the difference is shared equally between labour and management. Last year the difference amounted to \$1,052,924. Employee's bonus amounted to 23.3 cents per hour for each hour worked during the year. Should, however, the ratio of labour costs rise above 30 per cent, workers receive no bonus.

The Company reported that saving resulted from a 43 per cent decline in absenteeism, 15.8 per cent less scrap from machine operations and a 41 per cent decline in production time lost due to grievance procedures.

Pension plan established at the Ford Motor Company in U.S.A.

The first pension plan among the major automobile manufacturers in the United States was established at the Ford Motor Company late in June, following negotiation of a new collective agreement by the Company and the United Automobile Workers (CIO). The new contract provided, in addition to the pension plan, a straight 7-cent-an-hour wage increase.

Covering 107,000 production employees, the cost of the plan to the company will amount to \$200,000,000 for the first year and about \$15,000,000 annually thereafter, officials of the union estimated.

While details as to benefits and administration have not been definitely resolved, Mr. Richard T. Leonard, vice-president of the UAW and director of its Ford Division, estimated, in a statement to the press, that immediate benefits would be available to some 5,000 employees as a result of the retirement age being set at between 55 and 65.

He stated that the Union was striving for an arrangement which would provide a worker earning \$200 a month with a pension of \$100 a month after thirty years' employment. During the period the worker, under the contemplated joint participation plan, would have contributed approximately \$1,800, or 2½ per cent of earnings toward the pension and the Company 55 per cent.

Final details concerning death benefits, disability provisions, surrender value, vested rights, the method of administering the fund, qualifications for participation and exemptions were expected to be announced late in July.

Among concessions made by the Union in return for the wage rise and retirement plan was a promise of no wage demands in 1948, provided no increases were given to Chrysler and General Motors workers.

Plant-wide vacations gaining popularity in U.S.A.

Business Week of June 21, reports that plant-wide vacations are gaining popularity in the United States. It states that in numerous factories and shops over the nation, operations will be halted or reduced to a minimum for one or two weeks this summer while employees enjoy their annual holidays.

Typical of the trend is a report from Cleveland. "There Associated Industries polled 286 firms, found 152 were shutting down for a general vacation period.

"More and more firms are granting paid vacations to plant employees. . . . Those who

favour the plant-wide shutdown cite these advantages:—

"It leads to greater efficiency; gives all departments full crews; eliminates the problem of using or training substitutes; simplifies record-keeping.

"It provides time for inventory check, repairs, maintenance work.

"Employee arguments over who takes his vacation when, are eliminated.

"For some plants, it offers an opportunity to build up stockpiles of scarce materials."

Rand formula provided in collective agreements in U.S.A.

The Rand formula, providing for check-off of union dues from all employees in a plant regardless of whether or not they are members of the recognized union, has been incorporated in an agreement between the Western Union Telegraph Company, New York, and the American Communications Association (CIO). Approximately 7,000 employees are covered by the agreement.

The agreement follows a similar application, by the Company, of the Rand formula to 50,000 of its employees, members of the Commercial Telegraphers Union, an affiliate of the AFL, in other sections of the country.

In announcing the conclusion of the agreement, Mr. William N. Margolis, Assistant Regional Director of the United States Conciliation Service stated that the check-off clause stemmed from the Company's refusal to accede to a demand for a closed shop. He reported that the Union argument in demanding this union security measure was that it stopped non-union members from participating, without proportionate contribution, in benefits earned by the Union.

This form of union security was first included in a contract between the Ford Motor Company of Canada and the United Automobile, Aircraft and Agricultural Implement Workers of America (CIO-CCL) as a result of an arbitration award handed down by Mr. Justice I. C. Rand in a dispute between the parties (L.G., Jan., 1946, p. 123). It has since been adopted in other collective agreements both in Canada and the United States.

U.S. federal aid for vocational guidance

A policy of financial aid to State Boards of Vocational Education to enable them to develop vocational guidance was adopted by the United States Congress in enacting the George-Barden Act, 1946. No sum was specified in the Act and the amount to be placed at the disposal of the States

depends on the amount appropriated by Congress. The United States Commissioner of Education is to ensure that the States given assistance under the Act use the money in accordance with the principles laid down by the United States Office of Education and by the plans decided on by the State authorities. The Commissioner of Education has now announced that funds appropriated under the Act may be used to enable a State to supervise vocational counsellors and to pay the salaries and necessary travel expenses of vocational counsellors, and for the purchase of the necessary equipment for these purposes.

UMW plans research on miners' diseases

The United Mine Workers (AFL) is sponsoring an intensive study of the nature and treatment of silicosis and other diseases prevalent among anthracite miners. The sum of \$575,000 has been allocated from the anthracite welfare fund for a five-year research program in this field, to be conducted by the Jefferson Medical College at Philadelphia and White Haven, Pa. A special department will be established to carry on the program, which will include a study of: (1) the fundamental nature and mechanisms of the occupational diseases; (2) applied research into the incidence, prevention, and safety measures concerning these ailments; (3) the methods of caring for the sufferers, and (4) extensive education of physicians, public health workers, miners, etc., and publication of scientific reports for the medical profession as a whole.

High level of employment and earnings in U.S.A.

The Bureau of Labour Statistics of the United States Department of Labour announced on June 18 that production and employment had reached high levels and that no down-turn was in sight.

"For the third successive month, the total of wage and salaried workers in non-farm jobs stood firm at the record level of 42,000,000 after allowance is made for work stoppages. Unemployment, at the same time, fell to less than 2,000,000 equalling the post-reconversion low achieved last fall."

On the basis of preliminary data it was estimated that weekly earnings in May averaged \$48.86, compared with \$47.50 in April. The average work week was down to 40.4 hours, compared with the wartime average of 46 to 47 hours. Hourly earnings were estimated at \$1.21 in May, compared with \$1.186 in April.

U.S. company required to pay for "portal" time

Under the ruling of a federal judge in Los Angeles, the California Shipbuilding Corporation is required to pay for time spent by employees in preparing for work, despite the federal legislation outlawing portal-to-portal pay (L.G., June, 1947, p. 777). The case involved guards and firemen in an AFL union who were required to report for work fifteen to thirty minutes before the beginning of their shifts. Judge Paul J. McCormick, who issued the decision, justified it on the ground that the purpose of the portal-pay law is to avoid payment "for things that were beneficial to the employee and not beneficial to the employer".

Steel wages up 131 per cent in 10 years in U.S.A.

The basic wage rate in the United States' steel industry has risen 131 per cent since the advent of the United Steelworkers (CIO) in 1936 according to a report issued by the Union in June. During the first decade of its existence, just completed, the hourly rate for common labour rose from 47 cents to \$1.09. In 1906 the hourly wage rate was 15 cents, it stated.

Mr. Phillip Murray, Steelworkers President, has announced the intention of the Union not to seek any further wage adjustment during the life of the current agreement, which is not due to expire until April, 1949.

Union officials have indicated that a basic change in policy might be introduced in the negotiation of future contracts; and that instead of the traditional primary concern over wages and hours, emphasis may be transferred to worker security considerations in the form of social insurance, pensions and the guaranteed annual wage.

Report on migrant labour published in U.S.A.

Migrant Labour . . . A Human Problem, a publication containing the report of a Federal Interagency Committee established in May, 1946, to inquire into and make recommendations upon the conditions of migratory workers in the United States, has been released by the United States Department of Labour.

Migratory workers, whose livelihood is dependent upon the harvesting and processing of agricultural crops, are variously estimated to total from one to five million people. Despite their traditional implementation of a vital economic need in harvesting perishable crops at peak seasons, the nomadic character of migratory workers, imposed by the nature

of their work, has prevented organization and afforded them little opportunity to become articulate or bargain for themselves, the report stated.

Consequently, the report contended, the protection of the human rights of migrant workers should become the increasing concern of local, state and Federal Governments.

Among the particular recommendations outlined in the report was that necessary state and Federal social legislation be enacted to give migrant workers the same protection as that given other workers, in order to improve the employment status. This included establishing the minimum standards for working conditions, wages, transportation, and welfare and educational facilities. It was also recommended that local, state, and national citizen action be encouraged to "mobilize the intelligence and conscience of as many groups as possible for a progressive attack on the problems of migrant workers."

Emphasis was placed upon the handicaps imposed upon the children of migrant families. By travelling from place to place the children were robbed of a normal home and community life, as well as being handicapped by too early employment and lack of educational opportunities, the report stated. It recommended that immediate steps be taken to eliminate child labour among migrant workers and that adequate education and other community services be provided for children of migrants.

Housing, education, health and the rights to public welfare assistance were described as being generally inadequate. In recommending that these conditions be made the subject of public action, the report stated that the migrant worker contributes to the wealth and resources of the community in which he works. "That community has an obligation to extend to him and to his family opportunities to participate in its social life. Migrant workers do not seek nor do they require special privileges, treatment, or opportunities. Such needs as they may have for public assistance and welfare services can best be met by affording them the same rights and opportunities essential to the welfare of people in the nation as a whole. As citizens they are entitled to the protection afforded all industrial groups through State and Federal laws."

Medical college creates industrial health unit

To help meet the growing interest in industrial health as a major factor in production, the New York University College of Medicine is planning the establishment of an Institute of Industrial and Social Medicine as a unit of the New York

University-Bellevue Medical Centre. The new project, announced as one of the most important ever undertaken by the college in its 100-year history, is viewed as part of the institution's "responsibility to the community and for the purpose of instructing its students in environmental medicine." The institute will train both professional and lay workers. Its general clinic, in operation next fall, will offer wage earners comprehensive medical care. Dr. Henry E. Meleney, professor of preventive medicine at the institution, and Dr. Anthony J. Lanza, industrial health expert, will be co-directors of the new project.

Labour relations journal to be published

The publication of an academic journal devoted entirely to labour relations, first issue to appear in October, has been announced by the New York State School of Industrial Relations at Cornell University, Ithaca, New York. The intended journal, which will be the first academic publication in this rapidly expanding field of study, will issue quarterly.

Objective of the publication will be presentation of the "most reliable facts and the best thought" on personnel administration, labour and business history, collective bargaining, social security, workers compensation and related subjects. It will also carry book reviews and bibliographies, texts of pertinent documents in the field, and research reports.

"Newburyport Plan" for reducing prices in U.S.A.

Considerable publicity was given in the United States press to the so-called "Newburyport Plan" for reducing the cost of living.

Retailers in Newburyport, Massachusetts (population 15,000) agreed in April to reduce prices by 10 per cent for 10 days, the extension of the agreement beyond that period depending on corresponding action by wholesalers. The "plan" was adopted by some nine or ten other towns across the country. In Newburyport it came to an end in mid-May, after having been extended beyond its original period.

On April 21 President Truman had issued a statement in which he laid the primary responsibility for reducing prices on business, but indicated also the need for forbearance on the part of labour, all-out effort on the part of the farmer, and wise guidance and action on the part of Government.

Industrial Relations

Industrial Relations Bill Introduced by Government

New Legislation Designed to Replace Wartime Labour Relations Regulations and Industrial Disputes Investigation Act

ON June 17 the Honourable Humphrey Mitchell, Minister of Labour, introduced in the House of Commons Bill No. 338, to provide for the investigation, conciliation and settlement of industrial disputes.

The Bill was given second reading on June 24, and referred to the Standing Committee on Industrial Relations. This Committee, which last year undertook an inquiry into labour relations in Canada (L.G., Sept., 1946, p. 1331), proceeded to hear representations from organized labour, employers, and other interested parties, on the provisions of the Bill.

On July 4 the Prime Minister, Right Hon. W. L. Mackenzie King, announced that the measure would not be proceeded with at the present session of Parliament but would be allowed to stand over until another session, in order to give members the opportunity of carefully studying the evidence given before the Industrial Relations Committee.

This issue of the *LABOUR GAZETTE* contains a summary and the text of the Bill. Next month's issue will contain an account of the hearings of the Committee.

Summary of Provisions of Bill

The measure is designed to replace the Industrial Disputes Investigation Act, first enacted in 1907, the operation of which was suspended when the Wartime Labour Relations Regulations, P.C. 1003 of February 17, 1944, came into effect. It represents in a large measure a revision of the Wartime Labour Relations Regulations with modifications and additions considered advisable following from the experience gained in the administration of the Regulations and in the light of representations received from provincial authorities and labour and employer organizations.

The purpose of the legislation is to provide appropriate procedures and conciliation machinery to prevent or minimize work stoppages in undertakings and businesses which Parliament has the legislative authority to regulate.

Summary

In summary the Bill provides for—

1. The definition and prohibition of unfair labour practices on the part of employers, unions and other persons.

2. A procedure for certification of trade unions as bargaining agents for employees.

3. A procedure for compulsory collective bargaining and the negotiation of collective agreements, and conciliation in connection therewith.

4. Prohibition of strikes and lockouts, the taking of strike votes and changes in terms of employment until the collective bargaining and conciliation procedure prescribed in the Act has been complied with.

5. Collective agreements to be binding upon the employer and the trade union who are parties thereto, and the employees covered thereby, and a procedure for final settlement by arbitration or otherwise, without stoppage of work, of grievances arising under the agreement.

6. Prohibition of strikes and lockouts while a collective agreement is in effect.

7. Penalties for violation of the provisions of the Act by employers, employees or trade unions or employers' organizations.

8. The establishment of a representative labour relations board to deal with applications relating to the right of trade unions to represent employees for collective bargaining.

9. The appointment of Industrial Disputes Inquiry Commissions to inquire into industrial matters or disputes.

10. Co-operative arrangements with provinces in relation to the administration of provincial labour legislation similar to the Dominion legislation and the application thereof to any industry.

The Act is divided into two parts:—

Part I contains the provisions defining and prohibiting unfair labour practices, the procedures provided for certification of unions as bargaining agents of employees; and for the negotiation of collective agreements and settlements of grievances in connection with such agreements, and the enforcement provisions of the Act.

Part II specifies the industries to which the Act applies, provides for the appointment of a representative labour relations board to administer a number of the provisions of the Act, and contains other administrative provisions necessary and incidental to the operation of the Act.

Application of the Act

The Act applies to employees employed in industries which are within the legislative authority of Parliament to regulate. These include:—

- (a) navigation and shipping;
- (b) railways, canals, telegraphs, and other works and undertakings connecting a province with any other or extending beyond the limits of a province;
- (c) lines of ships connecting provinces or extending beyond the limits of a province;
- (d) interprovincial ferries or ferries between a province and any other country;
- (e) aerodromes and air transportation;
- (f) radio broadcasting stations;
- (g) works or undertakings which have been declared for the general advantage of Canada or for the advantage of two or more provinces;
- (h) any work, undertaking or business outside the exclusive legislative authority of the legislature of any province

and in respect of the employers of all such employees in their relations with such employees and in respect of trade unions and employers' organizations composed of such employees or employers.

Crown corporations are subject to the Act except where excluded by the Governor in Council (sec. 54).

For the purposes of the Act, the employees to whom the Act applies are those falling within the following definition of the term "employee":

"employee" means a person employed to do skilled or unskilled manual, clerical, or technical work, but *does not include*

- (i) a manager or superintendent or any other person who in the opinion of the Board exercises management functions or is employed in a confidential capacity in matters relating to labour relations;

(ii) a member of the medical, dental, architectural or legal profession.

"employer" means any person employing one or more employees.

"trade union" or "union" means any organization of employees formed for the purpose of regulating relations between employers and employees. In other words, this definition is broad enough to include an unaffiliated plant employees' association, a local union chartered by or affiliated with a provincial, national or international union, or a provincial, national or international union.

Unfair Labour Practices

Employers are prohibited from interfering or participating in the formation or administration of trade unions or contributing to their support or from discriminating in regard to employment against any person on account of union membership or union activities (sec. 4).

Employers and all other persons are prohibited from using coercion or intimidation to compel any person to become or refrain from becoming or to cease to be a member of a trade union (sec. 4).

Trade unions are prohibited from attempting to organize employees during their working hours without the employer's consent (sec. 5).

Collective agreements negotiated between employers and unions containing closed or union shop or preferential hiring provisions are valid (as in the Wartime Labour Relations Regulations); but any provision in such an agreement which would require an employer to discharge an employee because he has membership in or engages in activities on behalf of any union, other than one specified in the agreement, is invalid (sec. 6). The latter clause is new.

Certification Proceedings

A trade union which has as members in good standing a majority of employees in a bargaining unit may apply to the Labour Relations Board to be certified by the Board as the exclusive bargaining agent for the employees in the unit (sec. 7).

The Board is empowered to certify a trade union as the bargaining agent for a group of employees which it finds constitutes a unit appropriate for collective bargaining, if it is satisfied that a majority of the employees in the unit are members in good standing of the union.

If the Board finds it necessary to order a vote in order to dispose of an application, it may certify the union obtaining the votes of the majority of employees in the bargaining unit (sec. 9).

These provisions differ from P.C. 1003 in that the trade union is recognized as the bargaining agent of the unit of employees, whereas in P.C. 1003 recognition was given only to persons elected directly by the employees or appointed by a trade union as bargaining representatives. In P.C. 1003 a written authorization by an employee authorizing a union to represent him for collective bargaining was counted as a trade union membership for the purposes of the certification proceedings. Such written authorizations are not recognized in the new legislation.

Where the majority of a craft or technical group are members of a union pertaining to such craft or technical skills, the union is entitled to be certified as the bargaining agent for the group if the group otherwise is an appropriate unit. This provision is similar to P.C. 1003 but in P.C. 1003 was confined to craft groups.

Recognition as a bargaining agent is denied to any trade union which in the opinion of the Board is (a) influenced by an employer so that its fitness to represent employees for collective bargaining is impaired; or (b) dominated by an employer (sec. 9 (5)). This provision is new.

The Board is authorized to revoke a certification granted to a trade union where it is of opinion that the union no longer represents the majority of employees in the bargaining unit (sec. 11). This provision is new.

Negotiation of Collective Agreement

Following upon the certification of a trade union as bargaining agent for a unit of employees, either the union or the employer of the employees may by notice require the other party to enter upon negotiations for the conclusion of a collective agreement. It then becomes the duty of the parties to meet and enter upon negotiations. Either party may ask for and obtain the conciliation services of the Department of Labour to assist the parties in negotiations. In event of lack of progress in reaching an agreement, a Conciliation Board may be appointed by the Minister of Labour on request of either party to assist the parties in concluding an agreement.

These provisions are similar to P.C. 1003 but conciliation services may be obtained at an earlier date than under P.C. 1003, if required.

Similar provisions apply in the case of negotiations for the renewal or revision of an existing collective agreement by the parties thereto (secs. 12-16).

Strikes and Lockouts prohibited during the Period of Collective Bargaining

Where a trade union acting on behalf of a unit of employees is entitled to require the employer to enter upon negotiations for the conclusion of a collective agreement,—

- (a) the employees are prohibited from striking;
- (b) the trade union is prohibited from declaring or authorizing a strike;
- (c) the trade union is prohibited from taking a strike vote of the employees;
- (d) the employer is prohibited from declaring a lockout of the employees; and
- (e) the employer is prohibited from decreasing the wage rates or changing the other working conditions and terms of employment in effect at the time of the initiation of negotiations without the consent of the employees,

until the parties have complied with the provisions relating to negotiations and a Conciliation Board has been appointed to assist the parties in their negotiations and fourteen days have elapsed since the Board reported to the Minister of Labour on the results of its efforts—or until the alternative, upon application for the appointment of a Conciliation Board, the Minister of Labour advises that he does not intend to appoint a Board.

The same provisions apply in the case of negotiations for the renewal or revision of an existing collective agreement (sec. 21).

The provision prohibiting the taking of a strike vote until a Conciliation Board has reported and fourteen days have elapsed is new.

A trade union that is not entitled to represent a unit of employees as bargaining agent is prohibited from declaring or authorizing a strike of employees in that unit (sec. 23).

Collective Agreements

Every collective agreement must contain an appropriate procedure to provide for the final settlement by arbitration or otherwise of any disputes concerning the interpretation or violation, and if the agreement does not contain such a provision the Labour Relations Board may establish such procedure on application.

The parties bound by the agreement are required to comply with the provisions for final settlement in the agreement, and failure to do so constitutes a violation of the Act (sec. 19).

Collective agreements have effect for at least one year unless the Labour Relations Board consents to earlier termination thereof by the parties (sec 20).

Strikes and lockouts are prohibited during the time a collective agreement is in force, subject to the one exception that if the parties have agreed to re-negotiate any provision of the agreement during the life of the agreement, the provisions of the Act applicable to the negotiation of an agreement in the first instance apply to such re-negotiation (sec. 22).

Enforcement

Penalties are provided by way of fine on summary conviction for contravention of the unfair labour practice provisions, for contravention of the collective bargaining procedure, and for contravention of the strike and lockout provisions (secs. 39, 40, 41, 42).

Where an employer is convicted of wrongfully dismissing an employee for union membership or activities, the court may require the employer to pay back wages to the employee (sec. 40). This is new.

Complaints of failure on the part of an employer or trade union to comply with the provisions for collective bargaining may be referred by the Minister of Labour to the Labour Relations Board to investigate. Where upon such reference the Board finds that a party to collective bargaining has refused or failed to negotiate with the other party in accordance with the provisions of the Act, the Board may make an order directed to such party to require compliance with the provisions of the Act. Failure to comply with the Board's order is a contravention of the Act (sec. 43). This is new.

The Minister may refer any complaint alleging there has been a contravention of the Act to an Industrial Disputes Inquiry Commission or a conciliation officer for preliminary investigation and report, and he may take such report into consideration in determining whether consent to prosecute shall be given (sec. 44). This is new.

No prosecution may be instituted under the Act without the consent of the Minister of Labour (sec. 46).

For the purpose of any prosecution under the Act, a prosecution may be instituted against a trade union or employers' organization in the name of the union or organization, and for the purpose of such prosecution a trade union or employers' organization is deemed to be a person (sec. 45). This is new.

Industrial Inquiries

The Minister of Labour may appoint an Industrial Disputes Inquiry Commission of one or more persons to inquire into industrial matters or any industrial dispute. The pro-

cedure for appointment and use of these commissioners is similar to the provisions for this purpose in P.C. 4020 of June 6, 1941, which was used very effectively during the war period (sec. 56).

The Minister of Labour administers the Act (sec. 57).

Labour Relations Board

Provision is made for the appointment by Order in Council of a labour relations board designated the "Canada Labour Relations Board" consisting of a chairman and not more than eight other members representative in equal numbers of employers and employees (secs. 58-61).

The duties of the Board are those assigned to it under Part I of the Act, namely:—

1. To dispose of applications and disputes concerning the right of trade unions to represent employees in collective bargaining (secs. 7, 8, 9, 11).
2. On application, to prescribe procedures to be observed by parties to a collective agreement in disposing of grievances arising under the agreement.
3. At request of the Minister, to investigate complaints of failure on part of a union or an employer to enter on collective bargaining negotiations or to make a reasonable effort to effect an agreement and take appropriate action in respect thereto.

Arrangements with Provinces

Where a province enacts legislation corresponding to the provisions of Part I of this Act, and desires the Dominion authorities to administer it in relation to one or more industries to which the provincial legislation applies, the Minister of Labour with approval of the Governor in Council is authorized to enter into an agreement with the province for such purpose and in such instance or in any other case if the provincial legislation so provides and the Governor in Council authorizes, the Dominion authorities are empowered to administer the legislation in its application to such industries (secs. 62-63). This provision is new.

Certifications granted under P.C. 1003 are protected under the new Act. Where bargaining representatives were certified under P.C. 1003 on the application of a trade union for a unit of employees, that trade union is for the purposes of the Act considered to have been certified under the Act for the same unit of employees.

The Act comes into force by proclamation.

Major Differences between the Provisions of the Bill and the Provisions of P.C. 1003

The following are the more important differences between the provisions of the Bill and the provisions of P.C. 1003:—

1. By reason of the changes in the definition of the term "employee", the classes of supervisory employees, who are excluded from the application of the Act, are somewhat wider than in P.C. 1003. Exclusions extend to persons exercising management functions, whereas in P.C. 1003 such exclusions were limited by definition to persons having authority to hire or discharge employees.

On the other hand, the exclusion of confidential employees is confined to persons employed in a confidential capacity in relation to labour relations, whereas in P.C. 1003 the exclusion of persons employed in a confidential capacity was not so limited by definition.

2. Trade unions may be certified as bargaining agents for employees, but there is no provision for certification of individuals as bargaining representatives. Under P.C. 1003 only individuals elected by the employees or selected by the trade union representing the majority of employees could be certified as bargaining representatives of employees.

3. The basic requirement of the legislation for the certification of a trade union as the exclusive bargaining agent for a unit of employees is that the majority of employees in the unit are members in good standing of the union. In P.C. 1003 written authorizations given by employees in favour of a union were accorded recognition as the equivalent of actual union membership for purpose of certification.

4. There is provision giving the Board discretion to revoke certification granted to a union if satisfied that the union no longer represents the majority of employees. In P.C. 1003 when once certified there was no provision for revocation of certification except

when displaced by the bargaining representatives selected by another union organization.

5. The certification of company dominated unions is prohibited.

6. The provisions for use of conciliation services are modified to permit earlier access thereto if required, than under P.C. 1003.

7. Unions are prohibited not only from declaring or authorizing strikes until the collective bargaining procedure and conciliation measures prescribed have been complied with, but also from taking a strike vote of the employees concerned until these procedures and measures have been complied with. This latter provision is new.

8. Employers during the same period of negotiations and conciliation may not reduce wage rates or change working conditions in effect, without the consent of employees. This provision, while it was in the I.D.I. Act, was not incorporated in P.C. 1003 until amendments made in January, 1947. The provision is incorporated in the new legislation.

9. The provisions of the legislation giving the court, which finds an employer guilty of discharging an employee for union activities contrary to the Act, the authority to order payment of back wages to the employee is new as well as those provisions which give the Labour Relations Board authority to investigate complaints of failure to bargain collectively upon request of the Minister and give redress where the complaint is found to be justified.

10. The provision providing that for the purpose of prosecution under the Act a trade union or employers organization is deemed to be a person is new.

11. The use of Industrial Disputes Investigation Commissions for preliminary investigation of complaints of infractions of the Act is not in P.C. 1003 but corresponds in principle with the use made of such Commissions under P.C. 4020 during the wartime period.

Statement by Minister of Labour

In introducing the Bill in the House of Commons, the Hon. Humphrey Mitchell recalled that the more important principles of a new federal law had been discussed at the Conference of Dominion and Provincial Ministers of Labour held in 1946.

"The chief purpose of the Conference, of course, was to obtain the views of the Provinces as to when it would be most appropriate

to restore to the Provinces full responsibility for dealing with industrial disputes in industries ordinarily under their jurisdiction.

"As hon. members know, the Provinces resumed their full jurisdiction in these matters, some on March 31 and others on May 15. The bill now before the House applies only to employees and employers in industries under the jurisdiction of Parliament."

Enumerating these industries, the Minister continued:—

"The provisions of Part I of the Act are capable of being applied, by provincial legislation, to all or any particular industry within the jurisdiction of the provinces.

"In other words, we have tried to set a pattern which some of the Provinces may care to apply knowing that we shall not be moving as rapidly as we should towards the goal of industrial peace in this country if we have widely varying legislation of this nature in the spheres of Dominion and Provincial operation."

The Minister said that when the new legislation was drafted, P.C. 1003 had been found to be "of great value in contributing to stable labour relations during the critical war years and since, and we have included in the new legislation the best features of that order, changed in some respects and amplified in others, based upon the experience gained in its administration. We have also taken into consideration more recent representations which have been made to us by the Provinces and by labour and employer organizations."

Having summarized the provisions of the Bill, the Minister dealt as follows with its underlying principles:—

"In conclusion, may I say that we have received representations for the inclusion of measures severely curtailing union activities; from others have come suggestions which would involve, under certain conditions, the compulsory application of the principle of

union security in collective agreements and the adoption of other innovations.

"We have not given effect in this legislation to such representations, since it is not the desire of the government to place impediments in the way of free collective bargaining.

"The essential purpose of the legislation is to create conditions favourable to the free exercise of the collective bargaining function in order that negotiations between the parties to a dispute can be carried on with the greatest degree of success.

"For that reason, only such regulation of employer and employee activity in their industrial relationships considered as necessary to protect the public interest is incorporated in the legislation. It leaves with labour and management the major responsibility of settling between them their problems in regard to negotiation of collective agreements and administration of such agreements.

"It has long been my view that legislation of this nature will fail in its fundamental objective if it introduces features of a punitive and coercive character which could only result in driving employers and employees further apart. That would make it more difficult for them to establish those friendly relations of good will and co-operation which are so necessary.

"Human nature cannot be corrected by a law, and in the final analysis the major consideration in improving human relations between employers and employees is the simple matter of trying to see each other's point of view and developing mutual understanding."

Statements by Labour Organizations

Following the introduction of the Bill in the House of Commons the three major labour organizations in Canada issued statements expressing their opinion of its provisions. These statements, by Messrs. Percy R. Bengough, President, Trades and Labour Congress of Canada, Pat Conroy, Secretary-Treasurer, Canadian Congress of Labour, and Gerard Picard, General President, Canadian and Catholic Confederation of Labour, are printed below. Next month's issue of the LABOUR GAZETTE will summarize the statements of these organizations before the Industrial Relations Committee.

Trades and Labour Congress of Canada

The Trades and Labour Congress of Canada believes that one of the first steps towards national unity is uniform labour and social

laws throughout the Dominion. Naturally we would much prefer and will continue to strive for a National Labour Code.

Bill 338, An Act to provide for Investigation, Conciliation and Settlement of Industrial Disputes, which received its first reading before Parliament June 17, 1947, does not meet this requirement in that its application is limited to industries, undertakings of an interprovincial character and such works as are declared by the Parliament of Canada to be to the general advantage of Canada, or for the advantage of two or more provinces, and outside the exclusive legislative authority of any province.

In view of this limited scope, the formulation of regulations governing the vast majority of Canadian workers is left to the tender mercy of the various provinces. How-

ever, it must be fully recognized that the limitation is not chargeable to the Dominion but emanates from Provincial Governments who desire to retain all of their old time autonomy, even in face of modern methods and needs of Canadian economy. Such being the position, then the Congress has to judge Bill 338 on its merits and to the extent that it embodies our requests for inclusions and deletions.

First, we asked that the basic principles of P.C. 1003 be retained in the Dominion Labour Code. Bill 338 meets this requirement with improvements.

We requested that company unions be definitely prohibited. Section 4, Paragraphs 1, 2 and 3, while not definitely prohibiting company unions, certainly makes their existence insecure and their operation and recognition difficult.

We maintained that the union concerned should be named as the bargaining agency instead of individuals. Bill 338, Section 7, and other sections, fully meets these requirements.

Section 8, in affording protection to crafts or groups exercising technical skills, is both justifiable and necessary.

This Congress also requested that where all employees of an employer or organization of employers are required by agreement to be members of a specified union, there should be no provision in the law tending to prevent Section 6, subsection 1, meets our request in this respect. However, subsection 2 of the same Section is somewhat of a negation and should be eliminated.

We requested that in all cases in which both the employer and employees agree there should be no interference in their reaching or changing the provisions of an agreement. Section 20, subsection 2, meets this requirement.

We protested the old regulation of Order in Council P.C. 1003 which required that 51 per cent of the employees must vote for the union should read "51 per cent of the votes cast" in the same manner as all democratic elections. Section 9 is a distinct improvement and meets our wishes.

We also asked for a clearer definition of employee and as to what employees should be excluded. We requested that only employees brought into consultation on matters of the employers' labour policy should be termed confidential employees. Part I clarifies this in a satisfactory manner.

We desire to commend the Government for the inclusion of Section 32, Paragraph 8, in Bill 338, embodying a provision formerly contained in the original Industrial Disputes

Investigation Act which discourages the wholesale use of lawyers, which provision proved so beneficial in reaching finality in the Industrial Disputes Investigation Act and the absence of which was so disheartening in prolonging the agony in hearings under P.C. 1003. The balance of the Bill is a distinct improvement on Order in Council P.C. 1003.

We are definitely of the opinion that Bill 338 is worthy of support. It is quite possible that in operation weaknesses will be found that will require amendment. A great deal depends on its administration. Past experiences of this Congress have shown that poor legislation sympathetically administered has ofttimes been better than good legislation administered in a hostile manner.

The fact that the Board of Administration will not exceed eight members, comprised equally of representatives of employees and employers with a Government appointed Chairman is a good provision. The provisions covering the appointment of Boards of Conciliation are in accord with proven good procedure, being composed of representatives from each party to the dispute who jointly choose a Chairman and, on failure to do so, the third party is appointed by the Minister.

The Executive Council of The Trades and Labour Congress of Canada, after due and careful consideration of all features and for the reasons previously set out, commend the Government for the introduction of Bill 338 and would recommend that all provinces enact legislation of equal value.

(Sgd.) PERCY R. BENGOUGH,
President,

*The Trades and Labour Congress
of Canada,
On behalf of the Executive Council.*

June 19, 1947.

Canadian Congress of Labour

We are making a detailed study of the Government's new Labour Bill but at the moment it would appear grossly inadequate both as to the provisions desired by Labour and the scope of its coverage. It is our understanding that we shall be given an opportunity of making a submission to the Parliamentary Industrial Relations Committee and at that time the Congress and its unions hope to make a full statement of their views.

PAT CONROY,
Secretary-Treasurer,
The Canadian Congress of Labour.

June 17, 1947.

*Canadian and Catholic Confederation
of Labour*

(Translation)

The draft Bill (No. 338) concerning industrial relations and labour disputes investigations which the Hon. Humphrey Mitchell, Canadian Minister of Labour, has just tabled in the House of Commons at Ottawa is, without any doubt, the most progressive piece of industrial legislation to date. Even if this Bill does not fall in with all the views held by Canadian trade unions, it shows considerable improvement over the National War-time Labour Code (P.C. 1003), is superior to the American legislation, and contains a good many points from which the Provincial Government of Quebec could profitably draw inspiration.

The Federal Bill, which does not affect Provincial autonomy, sets the tone with regard to the legal existence of trade unions, protects industrial trade unionism and craft unions, strictly prohibits "company unions" dominated by the employers, recognizes union pluralism and accords the necessary protection to minority unions, resolutely enters the path of well defined union security, simplifies conciliation procedure, reduces delay to a

minimum, provides for the final settlement of grievances during the lifetime of agreements, and forms a real labour court, although of limited jurisdiction, by setting up the Dominion Labour Relations Board.

If this Board establishes adequate industrial jurisprudence, standards will be set up by which even the labour courts which the Provinces might establish could be guided.

The Federal Bill is not, properly speaking, a labour code. It is a bringing under regulations of collective bargaining, and these regulations apply to the industries coming under Federal jurisdiction.

It now remains to amend the Criminal Code in connection with strikes and picketing. The Criminal Code is not up to date in these matters. It would be desirable for the Department of Justice, which is responsible for penal law, to give serious consideration to the improvements to be made in this field in order not to prejudice the efficiency of strikes while at the same time protecting ownership and public security.

(Sgd.) GÉRARD PICARD,

General President,

*Canadian and Catholic Confederation
of Labour.*

June 20, 1947.

Text of Bill 338

An Act to provide for the Investigation,
Conciliation and Settlement of
Industrial Disputes

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

SHORT TITLE

1. This Act may be cited as *The Industrial Relations and Disputes Investigation Act*.

PART I

INTERPRETATION

2. (1) In this Act, unless the context otherwise requires,

- (a) "Board" means the labour relations board established to administer this Part;
- (b) "bargaining agent" means a trade union that acts on behalf of employees
 - (i) in collective bargaining; or
 - (ii) as a party to a collective agreement with their employer;
- (c) "certified bargaining agent" means a bargaining agent that has been certified under this Act and the certification of which has not been revoked;
- (d) "collective agreement" means an agreement in writing between an employer or an employers' organization acting on behalf of an employer, on the one hand, and a bargaining agent of his employees, on behalf of the employees, on the other hand, containing terms or conditions of employment of employees that include provisions

with reference to rates of pay and hours of work;

- (e) "collective bargaining" means negotiating with a view to the conclusion of a collective agreement or the renewal or revision thereof, as the case may be; and "bargaining collectively" and "bargain collectively" have corresponding meanings;
- (f) "Conciliation Board" means a Board of Conciliation and Investigation appointed by the Minister in accordance with section twenty-eight of this Act;
- (g) "Conciliation Officer" means a person whose duties include the conciliation of disputes and who is under the control and direction of the Minister;
- (h) "dispute" or "industrial dispute" means any dispute or difference or apprehended dispute or difference between an employer and one or more of his employees or a bargaining agent acting on behalf of his employees, as to matters or things affecting or relating to terms or conditions of employment or work done or to be done by him or by the employee or employees or as to privileges, rights and duties of the employer or the employee or employees;
- (i) "employee" means a person employed to do skilled or unskilled manual, clerical or technical work, but does not include
 - (i) a manager or superintendent, or any other person who, in the opinion of the Board, exercises management functions or is employed in a confidential capacity in matters relating to labour relations;

- (ii) a member of the medical, dental, architectural or legal profession qualified to practise under the laws of a province and employed in that capacity;
- (j) "employer" means any person who employs one or more employees;
- (k) "employers' organization" means an organization of employers formed for purposes including the regulation of relations between employers and employees;
- (l) "lockout" includes the closing of a place of employment, a suspension of work or a refusal by an employer to continue to employ a number of his employees, done to compel his employees, or to aid another employer to compel his employees, to agree to terms or conditions of employment;
- (m) "Minister" means the Minister charged with the administration of this Act;
- (n) "parties" with reference to the appointment of, or proceedings before a Conciliation Board means the parties who are engaged in the collective bargaining or the dispute in respect of which the Conciliation Board is or is not to be established;
- (o) "regulation" means a regulation of the Governor in Council under this Act;
- (p) "strike" includes a cessation of work, or refusal to work or to continue to work, by employees, in combination or in concert or in accordance with a common understanding, for the purpose of compelling their employer to agree to terms or conditions of employment or to aid other employees in compelling their employer to agree to terms or conditions of employment;
- (q) "to strike" includes to cease work, or to refuse to work or to continue to work, in combination or in concert or in accordance with a common understanding, for the purpose of compelling the employer of the employees who so cease, or refuse, to agree to terms or conditions of employment or to aid other employees in compelling their employer to agree to terms or conditions of employment;
- (r) "trade union" or "union" means any organization of employees formed for the purpose of regulating relations between employers and employees; and
- (s) words importing the masculine gender include corporations, trade unions and employers' organizations, as well as females.
- (2) No person shall cease to be an employee within the meaning of this Act by reason only of his ceasing to work as the result of a lockout or strike or by reason only of dismissal contrary to this Act.
- (3) For the purposes of this Act, a "unit" means a group of employees and "appropriate for collective bargaining" with reference to a unit, means a unit that is appropriate for such purposes whether it be an employer unit, craft unit, technical unit, plant unit, or any other unit and whether or not the employees therein are employed by one or more employer.

RIGHTS OF EMPLOYEES AND EMPLOYERS

3. (1) Every employee has the right to be a member of a trade union and to participate in the activities thereof.

(2) Every employer has the right to be a member of an employers' organization and to participate in the activities thereof.

UNFAIR LABOUR PRACTICES

4. (1) No employer or employers' organization, and no person acting on behalf of an employer or employers' organization, shall participate in or interfere with the formation or administration of a trade union, or contribute financial or other support to it: Provided that an employer may, notwithstanding anything contained in this section, permit an employee or representative of a trade union to confer with him during working hours or to attend to the business of the organization during working hours without deduction of time so occupied in the computation of the time worked for the employer and without deduction of wages in respect of the time so occupied, or provide free transportation to representatives of a trade union for purposes of collective bargaining or permit a trade union the use of the employers' premises for the purposes of the trade union.

(2) No employer, and no person acting on behalf of an employer, shall

- (a) refuse to employ or to continue to employ any person, or otherwise discriminate against any person in regard to employment or any term or condition of employment because the person is a member of a trade union; or
- (b) impose any condition in a contract of employment seeking to restrain an employee from exercising his rights under this Act.

(3) No employer and no person acting on behalf of an employer shall seek by intimidation, by threat of dismissal, or by any other kind of threat, or by the imposition of a pecuniary or other penalty, or by any other means to compel an employee to refrain from becoming or to cease to be a member or officer or representative of a trade union and no other person shall seek by intimidation or coercion to compel an employee to become or refrain from becoming or to cease to be a member of a trade union.

(4) Except as expressly provided, nothing in this Act shall be interpreted to affect the right of an employer to suspend, transfer, lay off or discharge an employee for proper and sufficient cause.

5. Except with the consent of the employer, no trade union and no person acting on behalf of a trade union shall attempt, at an employers' place of employment during the working hours of an employee of the employer, to persuade the employee to become or refrain from becoming or continuing to be a member of a trade union.

6. (1) Nothing in this Act prohibits the parties to a collective agreement from inserting in the collective agreement a provision requiring, as a condition of employment, membership in a specified trade union, or granting a preference of employment to members of a specified trade union.

(2) No provision in a collective agreement requiring an employer to discharge an employee because such employee is or continues to be a member of, or engages in activities on behalf of a union other than a specified trade union, shall be valid.

COLLECTIVE BARGAINING

Application for Certification of Bargaining Agent

7. (1) A trade union claiming to have as members in good standing a majority of employees of one or more employers in a unit

that is appropriate for collective bargaining may, subject to the rules of the Board and in accordance with this section, make application to the Board to be certified as bargaining agent of the employees in the unit.

(2) Where no collective agreement is in force and no bargaining agent has been certified under this Act for the unit, the application may be made at any time.

(3) Where no collective agreement is in force but a bargaining agent has been certified under this Act for the unit, the application may be made after the expiry of twelve months from the date of certification of the bargaining agent, but not before, except with the consent of the Board.

(4) Where a collective agreement is in force, the application may be made at any time after the expiry of ten months of the term of the collective agreement, but not before, except with the consent of the Board.

(5) Two or more trade unions claiming to have as members in good standing of the said unions a majority of employees in a unit that is appropriate for collective bargaining, may join in an application under this section and the provisions of this Act relating to an application by one union and all matters or things arising therefrom, shall apply in respect of the said application and the said unions as if it were an application by one union.

8. Where a group of employees of an employer belong to a craft or group exercising technical skills, by reason of which they are distinguishable from the employees as a whole and the majority of the group are members of one trade union pertaining to such craft or other skills, the trade union may apply to the Board subject to the provisions of section seven of this Act, and shall be entitled to be certified as the bargaining agent of the employees in the group if the group is otherwise appropriate as a unit for collective bargaining.

Certification

9. (1) Where a trade union makes application for certification under this Act as bargaining agent of employees in a unit, the Board shall determine whether the unit in respect of which the application is made is appropriate for collective bargaining and the Board may, before certification, if it deems it appropriate, include additional employees in, or exclude employees from, the unit.

(2) When, pursuant to an application for certification under this Act by a trade union, the Board has determined that a unit of employees is appropriate for collective bargaining.

(a) if the Board is satisfied that the majority of the employees in the unit are members in good standing of the trade union; or

(b) if, as a result of a vote of the employees in the unit, the Board is satisfied that a majority of them have selected the trade union to be a bargaining agent on their behalf;

the Board may certify the trade union as the bargaining agent of the employees in the unit.

(3) Where an application for certification under this Act is made by a trade union claiming to have as members in good standing a majority in a unit that is appropriate for collective bargaining, the employees in which are employed by two or more employers, the

Board shall not certify the trade union as the bargaining agent of the employees in the unit unless

(a) all employers of the said employees consent thereto; and

(b) the Board is satisfied that the trade union might be certified by it under this section as the bargaining agent of the employees in the unit of each such employer if separate applications for such purpose were made by the trade union.

(4) The Board shall, for the purposes of determining whether the majority of the employees in a unit are members in good standing of a trade union or whether a majority of them have selected a trade union to be their bargaining agent, make or cause to be made such examination of records or other inquiries as it deems necessary, including the holding of such hearings or the taking of such votes as it deems expedient, and the Board may prescribe the nature of the evidence to be furnished to the Board.

(5) Notwithstanding anything in this Act, no trade union, the administration, management or policy of which is, in the opinion of the Board,

(a) influenced by an employer so that its fitness to represent employees for the purpose of collective bargaining is impaired; or

(b) dominated by an employer; shall be certified as a bargaining agent of employees, nor shall an agreement entered into between such trade union and such employer be deemed to be a collective agreement for the purposes of this Act.

Effect of Certification

10. Where a trade union is certified under this Act as the bargaining agent of the employees in a unit

(a) the trade union shall immediately replace any other bargaining agent of employees in the unit and shall have exclusive authority to bargain collectively on behalf of employees in the unit and to bind them by a collective agreement until the certification of the trade union in respect of employees in the unit is revoked;

(b) if another trade union had previously been certified as bargaining agent in respect of employees in the unit, the certification of the last mentioned trade union shall be deemed to be revoked in respect of such employees; and

(c) if, at the time of certification, a collective agreement binding on or entered into on behalf of employees in the unit is in force, the trade union shall be substituted as a party to the agreement in place of the bargaining agent that is a party to the agreement on behalf of employees in the unit, and may, notwithstanding anything contained in the agreement, upon two months' notice to the employer terminate the agreement in so far as it applies to those employees.

Revocation of Certification

11. Where in the opinion of the Board a bargaining agent no longer represents a majority of employees in the unit for which it was certified, the Board may revoke such certification and thereupon, notwithstanding

sections fourteen and fifteen of this Act, the employer shall not be required to bargain collectively with the bargaining agent, but nothing in this section shall prevent the bargaining agent from making an application under section seven of this Act.

Notice to Negotiate

12. Where the Board has under this Act certified a trade union as a bargaining agent of employees in a unit and no collective agreement with their employer binding on or entered into on behalf of employees in the unit, is in force,

(a) the bargaining agent may, on behalf of the employees in the unit, by notice, require their employer to commence collective bargaining; or

(b) the employer or an employers' organization representing the employer may, by notice, require the bargaining agent to commence collective bargaining;

with a view to the conclusion of a collective agreement.

13. Either party to a collective agreement, whether entered into before or after the commencement of this Act, may, within the period of two months next preceding the date of expiry of the term of, or preceding termination of the agreement, by notice, require the other party to the agreement to commence collective bargaining with a view to the renewal or revision of the agreement or conclusion of a new collective agreement.

Negotiation

14. Where notice to commence collective bargaining has been given under section twelve of this Act

(a) the certified bargaining agent and the employer, or an employers' organization representing the employer shall, without delay, but in any case within twenty clear days after the notice was given or such further time as the parties may agree, meet and commence or cause authorized representatives on their behalf to meet and commence to bargain collectively with one another and shall make every reasonable effort to conclude a collective agreement; and

(b) the employer shall not, without consent by or on behalf of the employees affected, decrease rates of wages or alter any other term or condition of employment of employees in the unit for which the bargaining agent is certified until a collective agreement has been concluded or until a Conciliation Board appointed to endeavour to bring about agreement has reported to the Minister and fourteen days have elapsed after the report has been received by the Minister, whichever is earlier, or until the Minister has advised the employer that he has decided not to appoint a Conciliation Board.

15. Where a party to a collective agreement has given notice under section thirteen of this Act to the other party to the agreement

(a) the parties shall, without delay, but in any case within twenty clear days after the notice was given or such further time as the parties may agree upon, meet and commence or cause authorized representatives on their behalf to meet and commence to bargain collectively and make every

reasonable effort to conclude a renewal or revision of the agreement or a new collective agreement; and

(b) if a renewal or revision of the agreement or a new collective agreement has not been concluded before expiry of the term of, or termination of the agreement, the employer shall not, without consent by or on behalf of the employees affected, decrease rates of wages, or alter any other term or condition of employment in effect immediately prior to such expiry or termination provided for in the agreement, until a renewal or revision of the agreement or a new collective agreement has been concluded or a Conciliation Board, appointed to endeavour to bring about agreement, has reported to the Minister and fourteen days have elapsed after the report has been received by the Minister, whichever is earlier, or until the Minister has advised the employer that he has decided not to appoint a Conciliation Board.

Conciliation

16. Where a notice to commence collective bargaining has been given under this Act and

(a) collective bargaining has not commenced within the time prescribed by this Act; or

(b) collective bargaining has commenced; and either party thereto requests the Minister in writing to instruct a Conciliation Officer to confer with the parties thereto to assist them to conclude a collective agreement or a renewal or revision thereof and such request is accompanied by a statement of the difficulties, if any, that have been encountered before the commencement or in the course of the collective bargaining, or in any other case in which in the opinion of the Minister it is advisable so to do, the Minister may instruct a Conciliation Officer to confer with the parties engaged in collective bargaining.

17. Where a Conciliation Officer fails to bring about an agreement between parties engaged in collective bargaining or in any other case where in the opinion of the Minister a Conciliation Board should be appointed to endeavour to bring about agreement between parties to a dispute, the Minister may appoint a Conciliation Board for such purpose.

COLLECTIVE AGREEMENTS

18. A collective agreement entered into by a certified bargaining agent is, subject to and for the purposes of this Act, binding upon

(a) the bargaining agent and every employee in the unit of employees for which the bargaining agent has been certified; and

(b) the employer who has entered into the agreement or on whose behalf the agreement has been entered into.

19. (1) Every collective agreement entered into after the commencement of this Act shall contain a provision for final settlement without stoppage of work, by arbitration or otherwise, of all differences between the parties to or persons bound by the agreement or on whose behalf it was entered into, concerning its meaning or violation.

(2) Where a collective agreement, whether entered into before or after the commencement of this Act, does not contain a provision as required by this section, the Board shall, upon

application of either party to the agreement, by order, prescribe a provision for such purpose and a provision so prescribed shall be deemed to be a term of the collective agreement and binding on the parties to and all persons bound by the agreement and all persons on whose behalf the agreement was entered into.

(3) Every party to and every person bound by the agreement, and every person on whose behalf the agreement was entered into, shall comply with the provision for final settlement contained in the agreement.

20. (1) Notwithstanding anything therein contained, every collective agreement, whether entered into before or after the commencement of this Act, shall, if for a term of less than a year, be deemed to be for a term of one year from the date upon which it came or comes into operation, or if for an indeterminate term shall be deemed to be for a term of at least one year from that date and shall not, except as provided by section ten of this Act or with the consent of the Board, be terminated by the parties thereto within a period of one year from that date.

(2) Nothing in this section shall prevent the revision of any provision of a collective agreement, other than a provision relating to the term of the collective agreement, that under the agreement is subject to revision during the term thereof.

STRIKES AND LOCKOUTS

21. Where a trade union on behalf of a unit of employees is entitled by notice under this Act to require their employer to commence collective bargaining with a view to the conclusion or renewal or revision of a collective agreement, the trade union shall not take a strike vote or authorize or participate in the taking of a strike vote of employees in the unit or declare or authorize a strike of the employees in the unit, and no employee in the unit shall strike, and the employer shall not declare or cause a lockout of the employees in the unit, until

(a) the bargaining agent and the employer, or representatives authorized by them in that behalf have bargained collectively and have failed to conclude a collective agreement; and either

(b) a Conciliation Board has been appointed to endeavour to bring about agreement between them and fourteen days have elapsed from the date on which the report of the Conciliation Board was received by the Minister; or

(c) either party has requested the Minister in writing to appoint a Conciliation Board to endeavour to bring about agreement between them and fifteen days have elapsed since the Minister received the said request and

(i) no notice under subsection two of section twenty-eight of this Act has been given by the Minister, or

(ii) the Minister has notified the party so requesting that he has decided not to appoint a Conciliation Board.

22. (1) Except in respect of a dispute that is subject to the provisions of subsection two of this section

(a) no employer bound by or who is a party to a collective agreement, whether entered into before or after the commencement of

this Act, shall declare or cause a lockout with respect to any employee bound by the collective agreement or on whose behalf the collective agreement was entered into; and

(b) during the term of the collective agreement, no employee bound by a collective agreement or on whose behalf a collective agreement has been entered into, whether entered into before or after the commencement of this Act, shall go on strike and no bargaining agent that is a party to the agreement shall declare or authorize a strike of any such employee.

(2) Where a collective agreement is in force and any dispute arises between the parties thereto with reference to the revision of a provision of the agreement that by the provisions of the agreement is subject to revision during the term of the agreement, the employer bound thereby or who is a party thereto shall not declare or cause a lockout with respect to any employee bound thereby or on whose behalf the collective agreement has been entered into, and no such employee shall strike and no bargaining agent that is a party to the agreement shall declare or authorize a strike of any such employee until

(a) the bargaining agent of such employees and the employer or representatives authorized by them on their behalf have bargained collectively and have failed to conclude an agreement on the matters in dispute; and either

(b) a Conciliation Board has been appointed to endeavour to bring about agreement between them and fourteen days have elapsed from the date on which the report of the Conciliation Board was received by the Minister; or

(c) either party has requested the Minister in writing to appoint a Conciliation Board to endeavour to bring about agreement between them and fifteen days have elapsed since the Minister received the said request and

(i) no notice under subsection two of section twenty-eight of this Act has been given by the Minister, or

(ii) the Minister has notified the party so requesting that he has decided not to appoint a Conciliation Board.

23. Where a Conciliation Board has been appointed to conciliate a dispute between an employer and any of his employees otherwise than during the term of a collective agreement or in the course of collective bargaining, no such employee shall strike and the employer shall not declare or cause a lockout with respect to any such employee until fourteen days have elapsed from the date on which the report of the Conciliation Board was received by the Minister.

24. A trade union that is not entitled to bargain collectively under this Act on behalf of a unit of employees shall not declare or authorize a strike of employees in that unit.

25. Nothing in this Act shall be interpreted to prohibit the suspension or discontinuance of operations in an employer's establishment, in whole or in part, not constituting a lockout or strike.

26. Notwithstanding anything contained in this Act, any employee may present his personal grievance to his employer at any time.

CONCILIATION PROCEEDINGS

Conciliation officers

27. Where a Conciliation Officer has, under this Act, been instructed to confer with parties engaged in collective bargaining or to any dispute, he shall, within fourteen days after being so instructed or within such longer period as the Minister may from time to time allow, make a report to the Minister setting out

- (a) the matters, if any, upon which the parties have agreed;
- (b) the matters, if any, upon which the parties cannot agree; and
- (c) as to the advisability of appointing a Conciliation Board with a view to effecting an agreement.

Constitution of Conciliation Boards

28. (1) A Board of Conciliation and Investigation under this Act shall consist of three members appointed in the manner provided in this section.

(2) Where the Minister has decided to appoint a Conciliation Board, he shall forthwith, by notice in writing, require each of the parties within seven days after receipt by the party of the notice, to nominate one person to be a member of the Conciliation Board, and upon receipt of the nomination within the seven days, the Minister shall appoint such person a member of the Conciliation Board.

(3) If either of the parties to whom notice is given under this section, fails or neglects to nominate a person within seven days after receipt of the notice, the Minister shall appoint as a member of the Conciliation Board, a person he deems fit for such purpose, and such member shall be deemed to be appointed on the recommendation of the said party.

(4) The two members appointed under subsection two and three of this section shall, within five days after the day on which the second of them is appointed, nominate a third person, who is willing and ready to act, to be a member and Chairman of the Conciliation Board, and the Minister shall appoint such person a member and Chairman of the Conciliation Board.

(5) If the two members appointed under subsections two and three of this section fail or neglect to make a nomination within five days after the appointment of the second such member, the Minister shall forthwith appoint as the third member and Chairman of the Conciliation Board, a person whom he deems fit for such purpose.

(6) When the Conciliation Board has been appointed, the Minister shall forthwith notify the parties of the names of the members of the Board.

(7) Where the Minister has given notice to parties that a Conciliation Board has been appointed under this Act, it shall be conclusively presumed that the Conciliation Board described in the said notice has been established in accordance with the provisions of this Act, and no order shall be made or process entered or proceedings taken in any court to question the granting or refusal of a Conciliation Board, or to review, prohibit or restrain establishment of that Conciliation Board or any of its proceedings.

29. Upon a person ceasing to be a member of a Conciliation Board before it has completed its work, the Minister shall appoint a member in his place who shall be selected in the manner prescribed by this Act for the selection of the person who has so ceased to be a member.

30. Each member of a Conciliation Board shall, before acting as such, take and subscribe before a person authorized to administer an oath or affirmation, and file with the Minister, an oath or affirmation in the following form:

"I do solemnly swear (affirm) that I will faithfully, truly and impartially to the best of my knowledge, skill and ability, execute and perform the office of member of the Conciliation Board appointed to..... and will not, except in the discharge of my duties, disclose to any person any of the evidence or other matter brought before the said Board. So help me God."

Terms of Reference

31. (1) Where the Minister has appointed a Conciliation Board, he shall forthwith deliver to it a statement of the matters referred to it, and may, either before or after the making of its report, amend or add to such statement.

(2) After a Conciliation Board has made its report the Minister may direct it to reconsider and clarify or amplify the report or any part thereof or to consider and report on any new matter added to the amended statement of matters referred to it and the report of the Conciliation Board shall not be deemed to be received by the Minister until such reconsidered report is received.

Procedure

32 (1) A Conciliation Board shall, immediately after appointment of the Chairman thereof, endeavour to bring about agreement between the parties in relation to the matters referred to it.

(2) Except as otherwise provided in this Act, a Conciliation Board may determine its own procedure, but shall give full opportunity to all parties to present evidence and make representations.

(3) The Chairman may, after consultation with the other members of the Board, fix the time and place of sittings of a Conciliation Board and shall notify the parties as to the time and place so fixed.

(4) The Chairman and one other member of a Conciliation Board shall be a quorum, but, in the absence of a member, the other members shall not proceed unless the absent member has been given reasonable notice of the sitting.

(5) The decision of a majority of the members present at a sitting of a Conciliation Board shall be the decision of the Conciliation Board, and in the event that the votes are equal the Chairman shall have a casting vote.

(6) The Chairman shall forward to the Minister a detailed certified statement of the sittings of the Board, and of the members and witnesses present at each sitting.

(7) The report of the majority of its members shall be the report of the Conciliation Board.

(8) In any proceedings before the Conciliation Board, no person except with the consent of the parties shall be entitled to be repre-

mented by a barrister, solicitor or advocate and, notwithstanding such consent, a Conciliation Board may refuse to allow a barrister, solicitor or advocate to represent a party in any such proceedings.

33. (1) A Conciliation Board shall have the power of summoning before it any witnesses and of requiring them to give evidence on oath, or on solemn affirmation if they are persons entitled to affirm in civil matters, and orally or in writing, and to produce such documents and things as the Conciliation Board deems requisite to the full investigation and consideration of the matters referred to it, but the information so obtained from such documents shall not, except as the Conciliation Board deems expedient, be made public.

(2) A Conciliation Board shall have the same power to enforce the attendance of witnesses and to compel them to give evidence as is vested in any court of record in civil cases.

(3) Any member of a Conciliation Board may administer an oath, and the Conciliation Board may receive and accept such evidence on oath, affidavit or otherwise as it in its discretion may deem fit and proper whether admissible in evidence in a court of law or not.

34. A Conciliation Board or a member of a Conciliation Board or any person who has been authorized for such purpose in writing by a Conciliation Board may, without any other warrant than this section, at any time, enter a building, ship, vessel, factory, workshop, place, or premises of any kind wherein work is being or has been done or commenced by employees or in which an employer carries on business or any matter or thing is taking place or has taken place, concerning the matters referred to the Conciliation Board, and may inspect and view any work, material, machinery, appliance or article therein, and interrogate any person in or upon any such place, matter or thing hereinbefore mentioned; and no person shall hinder or obstruct the Board or any person authorized as aforesaid in the exercise of a power conferred by this section or refuse to answer an interrogation made as aforesaid.

Report

35. A Conciliation Board shall, within fourteen days after the appointment of the Chairman of the Board, or within such longer period as may be agreed upon by the parties, or as may from time to time be allowed by the Minister, report its findings and recommendations to the Minister.

36. On receipt of the report of a Conciliation Board the Minister shall forthwith cause a copy thereof to be sent to the parties and he may cause the report to be published in such manner as he sees fit.

37. No report of a Conciliation Board, and no testimony or proceedings before a Conciliation Board shall be receivable in evidence in any court in Canada except in the case of a prosecution for perjury.

ARBITRATION

38. Where a Conciliation Board has been appointed and at any time before or after it has made its report, the parties so agree in writing, the recommendation of the Conciliation Board shall be binding on the parties and they shall give effect thereto.

ENFORCEMENT

39. Every employer and every person acting on behalf of an employer who decreases a wage rate or alters any term or condition of employment contrary to section fourteen or section fifteen of this Act is guilty of an offence and liable on summary conviction to a fine not exceeding

(a) five dollars in respect of each employee whose wage rate was so decreased or whose term or condition of employment was so altered, or

(b) two hundred and fifty dollars, whichever is the lesser, for each day during which such decrease or alteration continues contrary to this Act.

40. (1) Every person, trade union and employers' organization who violates section four or section five of this Act is guilty of an offence and liable upon summary conviction,

(a) if an individual, to a fine not exceeding two hundred dollars; or

(b) if a corporation, trade union or employers' organization, to a fine not exceeding five hundred dollars.

(2) Where an employer is convicted for violation of paragraph (a) of subsection two of section four of this Act by reason of his having suspended, transferred, laid off or discharged an employee contrary to this Act, the convicting court, judge or magistrate, in addition to any other penalty authorized by this Act may order the employer to pay to the employee such sum as in the opinion of the court, judge or magistrate, as the case may be, is equivalent to the wages, salary or other remuneration that would have accrued to the employee up to the date of conviction but for such suspension, transfer, lay-off or discharge.

(3) Every person, trade union and employers' organization who contrary to this Act refuses or neglects to comply with any lawful order of the Board is guilty of an offence and liable on summary conviction to a fine not exceeding fifty dollars for each day during which such refusal or failure continues.

41. (1) Every employer who declares or causes a lockout contrary to this Act is guilty of an offence and liable upon summary conviction to a fine not exceeding two hundred and fifty dollars for each day that the lockout exists.

(2) Every person acting on behalf of an employer who declares or causes a lockout contrary to this Act is guilty of an offence and liable on summary conviction to a fine not exceeding three hundred dollars.

(3) Every trade union that declares or authorizes a strike contrary to this Act is guilty of an offence and liable upon summary conviction to a fine not exceeding one hundred and fifty dollars for each day that the strike exists.

(4) Every officer or representative of a trade union who declares or authorizes a strike contrary to this Act is guilty of an offence and liable upon summary conviction to a fine not exceeding three hundred dollars.

42. Every person, trade union or employers' organization who does anything prohibited by this Act or who refuses or neglects to do anything required by this Act to be done by him is guilty of an offence and, except where some other penalty is by this Act provided for the

act, refusal or neglect is liable on summary conviction,

- (a) if an individual, to a fine not exceeding one hundred dollars; or
- (b) if a corporation, trade union or employers' organization, to a fine not exceeding five hundred dollars.

43 (1) Where the Minister receives a complaint in writing from a party to collective bargaining that any other party to such collective bargaining has failed to comply with paragraph (a) of section fourteen of this Act or with paragraph (a) of section fifteen of this Act, he may refer the same to the Board.

(2) Where a complaint from a party to collective bargaining is referred to the Board pursuant to subsection one of this section, the Board shall inquire into the complaint and may dismiss the complaint or may make an order requiring any party to such collective bargaining to do such things as in the opinion of the Board are necessary to secure compliance with paragraph (a) of section fourteen or paragraph (a) of section fifteen of this Act.

(3) Every employer, employers' organization, trade union or other person in respect of whom an order is made under this section, shall comply with such order.

44. (1) A person claiming to be aggrieved because of an alleged violation of any of the provisions of this Act may make a complaint in writing to the Minister and the Minister, upon receipt of such complaint, may require an Industrial Inquiry Commission appointed by him pursuant to section fifty-six of this Act or a Conciliation Officer to investigate and make a report to him in respect of the alleged violation.

(2) Upon receipt of a report pursuant to subsection one of this section, the Minister shall furnish a copy to each of the parties affected and if the Minister considers it desirable to do so, shall publish the same in such manner as he sees fit.

(3) The Minister shall take into account any report made pursuant to this section in granting or refusing to grant consent to prosecute under section forty-six of this Act.

45. A prosecution for an offence under this Act may be brought against an employers' organization or a trade union and in the name of the organization or union and for the purpose of such a prosecution a trade union or an employers' organization shall be deemed to be a person, and any act or thing done or omitted by an officer or agent of an employers' organization or trade union within the scope of his authority to act on behalf of the organization or union shall be deemed to be an act or thing done or omitted by the employers' organization or trade union.

46. (1) No prosecution for an offence under this Act shall be instituted except with the consent in writing of the Minister.

(2) A consent by the Minister indicating that he has consented to the prosecution of a person named therein for an offence under this Act alleged to have been committed, or in the case of a continuing offence, alleged to have commenced, on a date therein set out, shall be a sufficient consent for the purposes of this section to the prosecution of the said person for any offence under this Act committed by or commencing on the said date.

GENERAL

47. For the purposes of this Act, an application to the Board or any notice or any collective agreement may be signed, if it is made, given or entered into

- (a) by an employer who is an individual, by the employer himself;
- (b) where several individuals, who are jointly employers, by a majority of the said individuals;
- (c) by a corporation, by one of its authorized managers or by one or more of the principal executive officers;
- (d) by a trade union or employers' organization, by the president and secretary or by any two officers thereof or by any person authorized for such purpose by resolution duly passed at a meeting thereof.

48. For the purpose of this Act, and of any proceedings taken thereunder, any notice or other communication sent through His Majesty's mails shall be presumed, unless the contrary is proved, to have been received by the addressee in the ordinary course of mail.

(2) A document may be served or delivered for the purposes of this Act or any proceedings thereunder in the manner prescribed by regulation.

49. (1) Any document purporting to contain or to be a copy of any rule, decision or order of the Board, and purporting to be signed by a member of the Board, or the chief executive officer thereof, shall be accepted by any court as evidence of the regulation, rule, direction, order or other matter therein contained of which it purports to be a copy.

(2) A certificate purporting to be signed by the Minister or his Deputy or by an official in his department stating that a report, request or notice was or was not received or given by the Minister pursuant to this Act, and if so received or given, the date upon which it was so received or given, shall be *prima facie* evidence of the facts stated therein without proof of the signature or of the official character of the person appearing to have signed the same.

50. Failure of a Conciliation Officer or Conciliation Board to report to the Minister within the time provided in this Act shall not invalidate the proceedings of the Conciliation Officer or Conciliation Board or terminate the authority of the Conciliation Board under this Act.

51. No proceeding under this Act shall be deemed invalid by reason of any defect in form or any technical irregularity.

INFORMATION

52. (1) Each of the parties to a collective agreement shall forthwith upon its execution file one copy with the Minister.

(2) The Board may direct any trade union or employers' organization which is a party to any application for certification, or is a party to an existing collective agreement, to file with the Board

- (a) a statutory declaration signed by its President or Secretary stating the names and addresses of its officers; and
- (b) a copy of its constitution and by-laws; and the trade union or employers' organization shall comply with the direction within the time prescribed by the Board.

PART II

APPLICATION AND ADMINISTRATION

Application

53. Part I of this Act shall apply in respect of employees who are employed upon or in connection with the operation of the following works, undertakings or businesses, namely,

- (a) works, undertakings or businesses operated or carried on for or in connection with navigation and shipping, whether inland or maritime, including the operation of ships and transportation by ship anywhere in Canada;
- (b) railways, canals, telegraphs and other works and undertakings connecting a province with any other or others of the provinces, or extending beyond the limits of a province;
- (c) lines of steam and other ships connecting a province with any other or others of the provinces or extending beyond the limits of a province;
- (d) ferries between any province and any other province or between any province and any country other than Canada;
- (e) aerodromes, aircraft and lines of air transportation;
- (f) radio broadcasting stations;
- (g) such works or undertakings as, although wholly situate within a province, are before or after their execution declared by the Parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the provinces; and
- (h) any work, undertaking or business outside the exclusive legislative authority of the legislature of any province;

and in respect of the employers of all such employees in their relations with such employees and in respect of trade unions and employers' organizations composed of such employees or employers.

54. Part I of this Act shall apply in respect of any corporation established to perform any function or duty on behalf of the Government of Canada and in respect of employees of such corporations, except any such corporation, and the employees thereof, that the Governor in Council, excludes from the provisions of Part I.

55. Except as provided by section fifty-four, Part I of this Act shall not apply to His Majesty in right of Canada or employees of His Majesty in right of Canada.

INDUSTRIAL INQUIRIES

56. (1) The Minister may either upon application or of his own initiative, where he deems it expedient, make or cause to be made any inquiries he thinks fit regarding industrial matters, and may do such things as seem calculated to maintain or secure industrial peace and to promote conditions favourable to settlement of disputes.

(2) For any of the purposes of subsection one of this section or where in any industry a dispute or difference between employers and employees exists or is apprehended, the Minister may refer the matters involved to a Commission, to be designated as an Industrial Inquiry Commission, for investigation thereof, as the Minister deems expedient, and for report thereon; and shall furnish the Commission with a statement of the matters concerning which

such inquiry is to be made, and, in the case of any inquiry involving any particular persons or parties, shall advise such persons or parties of such appointment.

(3) Immediately following its appointment an Industrial Inquiry Commission shall inquire into the matters referred to it by the Minister and endeavour to carry out its terms of reference; and in the case of a dispute or difference in which a settlement has not been effected in the meantime the report of the result of its inquiries, including its recommendations, shall be made to the Minister within fourteen days of its appointment or such extension thereof as the Minister may from time to time grant.

(4) Upon receipt of a report of an Industrial Inquiry Commission relating to any dispute or difference between employers and employees the Minister shall furnish a copy to each of the parties affected and shall publish the same in such manner as he sees fit.

(5) An Industrial Inquiry Commission shall consist of one or more members appointed by the Minister and the provisions of sections thirty-three and thirty-four of this Act shall apply, *mutatis mutandis*, as though enacted in respect of that Commission and the Commission may determine its own procedure but shall give full opportunity to all parties to present evidence and make representations.

(6) The Chairman and members of an Industrial Inquiry Commission shall be paid remuneration and expenses at the same rate as is payable to a Chairman and members of a Conciliation Board under this Act.

ADMINISTRATION

Minister

57. The Minister of Labour shall be charged with the administration of this Act and shall exercise the powers and perform the duties imposed on the Minister by Part I of this Act.

Canada Labour Relations Board

58. (1) There shall be a labour relations board to administer Part I of this Act which shall be known as the Canada Labour Relations Board and shall consist of a chairman, and such number of other members as the Governor in Council may determine, not exceeding eight consisting of an equal number of members representative of employees and employers.

(2) The members of the Board shall be appointed by the Governor in Council and shall hold office during pleasure.

(3) In addition to the chairman and members of the Board, the Governor in Council may appoint a person as vice-chairman to act in the place of the chairman during his absence for any reason, and the vice-chairman shall be a member of the Board while so acting.

(4) The head office of the Board shall be in Ottawa.

(5) The Board shall have the powers of commissioners under Part I of the *Inquiries Act*.

(6) The Board may receive and accept such evidence and information on oath, affidavit or otherwise as in its discretion it may deem fit and proper whether admissible as evidence in a court of law or not.

(7) The members shall be paid such remuneration as may be fixed by the Governor in Council, and such actual and reasonable

expenses as may be incurred by them in the discharge of their duties.

59. The Board may by order authorize any person or board to exercise or perform all or any of its powers or duties under this Act relating to any particular matter and a person or board so authorized shall with respect to such matter have the powers of commissioners under Part I of the *Inquiries Act*.

60. The Board may, with the approval of the Governor in Council, make rules governing its procedure and, where an application for certification in respect of a unit has been refused, the time when a further application may be made in respect of the same unit by the same applicant.

Powers of Board

61 (1) If in any proceeding before the Board a question arises under this Act as to whether

- (a) a person is an employer or employee;
- (b) an organization or association is an employers' organization or a trade union;
- (c) in any case a collective agreement has been entered into and the terms thereof and the persons who are parties to or are bound by the collective agreement or on whose behalf the collective agreement was entered into;
- (d) a collective agreement is by its terms in full force and effect;
- (e) any party to collective bargaining has failed to comply with paragraph (a) of section fourteen or with paragraph (a) of section fifteen of this Act;
- (f) a group of employees is a unit appropriate for collective bargaining;
- (g) an employee belongs to a craft or group exercising technical skills; or
- (h) a person is a member in good standing of a trade union;

the Board shall decide the question and its decision shall be final and conclusive for all the purposes of this Act.

(2) A decision or order of the Board is final and conclusive and not open to question, or review, but the Board may, if it considers it advisable so to do, reconsider any decision or order made by it under this Act, and may vary or revoke any decision or order made by it under this Act.

Arrangements with Provinces

62. (1) Where legislation enacted by the legislature of a province and Part I of this Act are substantially uniform, the Minister of Labour may, on behalf of the Government of Canada, with the approval of the Governor in Council, enter into an agreement with the government of the province to provide for the administration by officers and employees of Canada of the provincial legislation.

(2) An agreement made pursuant to subsection one of this section may provide

- (a) for the administration by Canada of the said legislation of the province with respect to any particular undertaking or business;
- (b) that the person who is from time to time the Minister may on behalf of the province exercise or perform powers or duties conferred under the legislation of the province referred to in subsection one of this section;

(c) that the persons who from time to time are members of the Board, or other officers and employees of Canada, may exercise or perform powers or duties conferred or imposed under the said legislation of the province, either by way of appeal or otherwise; and

(d) for payment by the Government of the province to the Government of Canada for expenses incurred by the said Government of Canada in the administration of the said legislation of the province.

63. Where the legislature of a province has enacted legislation substantially uniform with Part I of this Act and

- (a) an agreement has been entered into between the Government of Canada and the government of such province; or
 - (b) such legislation so provides and the Governor in Council so orders;
- the person who is from time to time the Minister and the persons who, from time to time, are members of the Board, and other officers or employees of Canada, may exercise the powers and perform the duties specified in such legislation or agreement.

Conciliation Boards

64 (1) Unless the Governor in Council otherwise orders, the following remuneration shall be paid:

- (a) to a member of a Conciliation Board other than the chairman, an allowance of five dollars for each day, not more than three, during which he is engaged in considering the recommendation of a person to be the third member of the Board; and,
- (b) to a member of the Board, other than the chairman, an allowance at the rate of twenty-five dollars for each day he is present when the Board sits and for each day necessarily spent travelling from his place of residence to a meeting of the Board and returning therefrom and for each day not exceeding two days he is engaged in completion of the Board's report and to the chairman an allowance of thirty dollars for each day to be similarly determined.

(2) Each member of a Conciliation Board is entitled to his actual and reasonable travelling and living expenses for each day that he is absent from his place of residence, in connection with the work of the Board.

65. Every person who is summoned by the Board or a Conciliation Board or Industrial Inquiry Commission and duly attends as a witness shall be entitled to an allowance for expenses determined in accordance with the scale for the time being in force with respect to witnesses in civil suits in the superior court in the province where the inquiry is being conducted, and in any event, he shall be entitled to not less than four dollars for each day he so attends.

66. The Minister may provide a Conciliation Board, or Industrial Inquiry Commission with a secretary, stenographer, and such clerical or other assistance as to the Minister seems necessary for the performance of its duties and fix their remuneration.

REGULATIONS

67. (1) The Governor in Council may make regulations

- (a) as to the time within which anything authorized by this Act shall be done;

- (b) excluding an employer or employee or any class of employers or employees from the provisions of Part I of this Act or any of the provisions thereof; and
- (c) generally for carrying any of the purposes or provisions of this Act into effect.

(2) Regulations made under this section shall go into force on the day of the publication thereof in the *Canada Gazette*, and they shall be laid before Parliament within fifteen days after such publication, or, if Parliament is not then in session, within fifteen days after the opening of the next session thereof.

ANNUAL REPORT

68. An annual report with respect to the matters transacted by him under this Act shall be laid by the Minister before Parliament within the first fifteen days of each session thereof.

GENERAL

69. There may be employed in the manner authorized by law, such officers, clerks and employees as are necessary for the administration of this Act, including a Chief Executive Officer of the Board.

70. The expenses of the administration of this Act shall be paid out of moneys provided by Parliament.

71. All fines and penalties imposed under this Act shall be payable to the Receiver General of Canada and belong to His Majesty in right of Canada for the public uses of Canada.

CONTINUATION

72. (1) The Canada Labour Relations Board established by this Act shall be the successor to the Wartime Labour Relations Board established by order of His Excellency the Governor General in Council of the seventeenth day of February, one thousand nine hundred and forty-four, as amended from time to time, and the said order, as amended, shall be deemed to have been revoked on the coming into force of this Act, and all acts and things done and

matters and proceedings commenced by the said Wartime Labour Relations Board under the said order, as amended, shall, in so far as the said matters and proceedings are within the authority of the Canada Labour Relations Board established by this Act, be continued by the Canada Labour Relations Board under this Act.

(2) Every regulation, order, decision or determination or any other act or thing, made, given or done by or on behalf of the Wartime Labour Relations Board or by the Minister or by any other person under the order of His Excellency the Governor General in Council mentioned in subsection one of this section, shall, in so far as the said regulation, order, decision, determination, act or thing might be done under this Act, be deemed to have been made, given or done by the Canada Labour Relations Board or the Minister or such other person under this Act.

(3) Where a person was certified, before the commencement of this Act, under the Order of His Excellency the Governor General in Council mentioned in subsection one of this section, as a bargaining agent pursuant to an application by a trade union (including therein an employees' organization as defined in the said Order) the said trade union shall be deemed to have been certified as a bargaining agent for the purposes of Part I of this Act for the employees on behalf of whom the said person was so certified so far as the said Part I applies to the said employees, and where in any other case a person was so certified as a bargaining agent, such person shall be deemed to be a bargaining agent for the purposes of Part I of this Act for the employees on behalf of whom he was so certified so far as the said Part I applies to the said employees.

REPEAL AND COMMENCEMENT

73. The *Industrial Disputes Investigation Act* is repealed.

74. This Act shall come into force on a day to be fixed by proclamation.

Present Position with Respect to Labour Relations Legislation in Canada

DURING the war and its aftermath, the Dominion Wartime Labour Relations Regulations (P.C. 1003) of February 13, 1944, which suspended the Industrial Disputes Investigation Act, enacted first in 1907, have required employers to negotiate with the representatives of their employees and provided machinery for the settlement of disputes. The Regulations applied throughout Canada to transport and communication agencies, and, by virtue of the War Measures Act and subsequent enactments, to certain specified industries deemed essential to the war effort or to the life of the community, and, by virtue of provincial enactments in certain provinces, to all other industries within their scope in the province.

The Labour Relations Regulations while making several modifications in application and machinery, incorporated the principle of compulsory collective bargaining adopted by Alberta, British Columbia and Nova Scotia in 1937 and 1938, and by Ontario in 1943, and, also, the provisions postponing the right to strike until after inquiry, long familiar through the I.D.I. Act. The latter had inspired legislation in the late thirties in several provinces.

Since March 31 last, the Dominion Regulations have applied directly only to transport and communication agencies and to other industries only where a Provincial Legislature has declared them to apply. Their direct application to "war industries" was removed on March 31. Thus restricted, they may re-

main in effect, unless revoked by Order in Council, until December 31, 1947, if Parliament meets in November or December, or if Parliament does not meet then, until the sixtieth day of the first Parliamentary Session of 1948 or until March 31, 1948, whichever of these dates is the earlier. Moreover, if both Houses of Parliament, by resolution, request the extension of certain Orders in Council, including these Regulations, the Government may, by Order in Council, continue them for not more than one year more.

This extension of the Regulations has been made possible by a succession of statutory provisions which are set out below.

Looking to the expiry of the Dominion Regulations in relation to "provincial industries" the Provinces took action to resume their jurisdiction and provide statutory machinery to encourage collective bargaining and to settle disputes. This legislation is indicated below.

The Wartime Labour Relations Regulations were made under the authority of the War Measures Act, 1914. In 1945, the National Emergency Transitional Powers Act declared that, for the purposes of the War Measures Act, the war should be deemed to cease to exist on January 1, 1946, but the 1945 statute continued the Government's power to deal by Order in Council with certain matters until December 31, 1946, if Parliament met in November or December of 1946, but, if not, until the fifteenth day after Parliament met in 1947.

Under this authority, an Order in Council (P.C. 7414) of December 28, 1945, extended, for the duration of the statute, the life of all Orders in Council in force just before the 1945 Act came into effect, including the Wartime Labour Relations Regulations.

At the 1946 Parliamentary Session, the National Emergency Transitional Powers Act, 1945, was extended until December 31, 1946, if Parliament met during November or December 1946, but if not, until the sixtieth day after Parliament met in 1947 or until March 31, 1947, whichever was the earlier. It was again stipulated, as in 1945, that on a Joint Resolution of both Houses of Parliament, the Government could continue the Act for not more than a year.

The Act, then, would have expired on March 31, 1947, but under the authority of the 1946 amendment, an Order in Council (P.C. 1112) of March 25, 1947, which was based on a Joint Resolution of the two Houses of Parliament, continued it until May 15, 1947.

A statute of the present Session of Parliament, which was assented to on May 14, continues in force, notwithstanding the expiry of the 1945 Act, certain specified Orders in Council. This Continuation of Transitional Measures Act, 1947, which continues, among others, the Labour Relations Regulations, subject to power given to the Government to revoke them, until December 31, 1947, if Parliament meets in November or December, but if not, until the sixtieth day of the first Parliamentary Session in 1948 or until March 31, 1948, whichever is the earlier. Again, on a Joint Resolution of both Houses of Parliament, the Government may extend the Act for still another year.

As regards administration, the Regulations, in relation to war industries ordinarily within the provincial field, were administered by the provincial authorities, except in Alberta and Prince Edward Island, as a result of agreement between the Dominion and the Provinces concerned. The agreements provided for a provincial board or agency to which was delegated some of the authority of the National Labour Relations Board which had been created by the Regulations, for an appeal from decisions of a provincial board to the National, for joint responsibility for the expenditure involved, and for co-operation between Dominion and provincial conciliation services. A provincial Wartime Labour Relations Board was set up in six of these seven Provinces, but in British Columbia the provincial Minister of Labour was in charge of the Regulations as concerning war industries.

In Alberta and Prince Edward Island, which did not make agreements with the Dominion, war industries came under the National Board.

With respect to other industries normally under provincial jurisdiction, the Regulations were applied in 1944 by provincial legislation in six provinces, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario and Saskatchewan. In Saskatchewan, however, the Trade Union Act, enacted at a second Session in 1944, repealed the Labour Relations Act passed at the first Session. This earlier Act suspended the pre-war legislation concerning trade unions, applied the Dominion Regulations to disputes in the Province and provided for an agreement with the Dominion for this purpose. The Trade Union Act required collective bargaining and provided machinery for settling disputes without reference to the Dominion Regulations.

On the other hand, in Ontario, the Collective Bargaining Act, 1943, was repealed by the Labour Relations Board Act, 1944, which made effective the Dominion Regulations with

respect to all industries; in British Columbia the Wartime Labour Relations Regulations Act, 1944, and in Manitoba, New Brunswick and Nova Scotia, statutes of like title in the same year, applied the Dominion Regulations to all industries and placed the provincial legislation in abeyance in so far as it conflicted with the Dominion Regulations.

In these five provinces, the provincial Wartime Labour Relations Board, which was established by the agreement for war industries, was charged also with the application of the Regulations to "provincial" industries other than war plants and services. In Quebec and Saskatchewan, on the contrary, a Labour Relations Board set up under the Quebec Labour Relations Act and the Saskatchewan Trade Union Act, respectively, had charge of "provincial" industries, not being "war" industries.

This was the situation, then, until early in 1947. On January 30, 1947, the Wartime Labour Relations Regulations were amended to strike out the Schedule of "war industries" and the sections of the Regulations relating to them. Thus, from March 31, "war industries" reverted to provincial authority.

Other changes made by this Order in Council, which went into effect on February 15, brought wages within the area of compulsory collective bargaining and incorporated in the Regulations the provisions of the Order in Council (P.C. 4020) of June 6, 1941, providing for Industrial Disputes Inquiry Commissions to investigate differences between employers and employed and, also, complaints concerning discrimination on the ground of union membership or activity. Wartime wage-control had removed the question of wages from collective bargaining but the termination of this control on November 30, 1946, opened the way for free bargaining on the subject and its inclusion in the Labour Relations Regulations.

Manitoba, New Brunswick and Nova Scotia continued their Wartime Labour Relations Regulations Acts. Dominion Orders in Council of January 30, 1947, amending from February 15 the earlier Orders in Council establishing Wartime Labour Relations Boards in these three Provinces, provided for the reconstitution of these Boards.

However, later, New Brunswick proclaimed its Labour Relations Act, 1945, which is similar to the Dominion Regulations, to take effect on May 15, 1947 repealing the New Brunswick Wartime Labour Relations Regulations Act.

In Nova Scotia the Trade Union Act, 1947, proclaimed in effect from July 1, will replace the Regulations Act. The new statute incorporates some provisions of the Labour Rela-

tions Regulations and some of the Nova Scotia Trade Union Act, 1937.

The Manitoba Wartime Labour Relations Regulations Act, 1944, which suspended the Manitoba Strikes and Lockouts Prevention Act, 1937, was amended this year to stipulate that the Dominion Regulations, as incorporated in the principal Act, should continue in effect notwithstanding their expiry as Dominion Orders. The necessary changes consequent on this provision were made.

In Ontario, the arrangement with the Dominion was terminated from April 3, 1947, at the request of the province, by a Dominion Order in Council (P.C. 1820) of May 8. The Ontario Labour Relations Board Act, 1944, which reproduced the Dominion Regulations, was amended on April 3 last, to enable the Government to continue it in effect, together with any amendments made by the Dominion and any alterations necessary to adapt the provisions to an Ontario enactment. On May 1, Regulations made under this authority reenacted the provisions of the Dominion Regulations as amended, with some changes. The amendment was omitted which was made by the Order in Council (P.C. 302) of January 30, 1947, to the section setting out the conditions on which strikes and lockouts are forbidden.

In Alberta the Industrial Conciliation and Arbitration Act, 1938, subsequently amended, has been repealed, but its provisions, with some changes, are embodied in the Alberta Labour Act, 1947, now in effect.

In British Columbia, the Industrial Conciliation and Arbitration Act, 1947, repealed the Labour Relations Regulations Act, 1944, and the Industrial Conciliation and Arbitration Act, 1937, and amendments. In force on May 15, the new statute consolidates, with some changes, the 1937 Act as amended.

In Quebec the Labour Relations Act, 1944, the Public Service Employees' Disputes Act, 1944, and the Trade Disputes Act originally enacted in 1901, are in full force, as they have been since their enactment, except the first-named with respect to war industries.

In Saskatchewan the Trade Union Act, 1944, has been applied since its passage except in relation to war industries.

In Prince Edward Island the Trade Union Act, 1945, requires collective bargaining and lays down regulations concerning trade unions but it does not establish machinery for determining questions of representation or for settling disputes.

To sum up, then, the Wartime Labour Relations Regulations, a Dominion Order in Council of 1944, apply at the present time to transport and communication agencies. They

have been incorporated with little substantive change in the law of Manitoba, New Brunswick, and Ontario. Legislation of 1947 in Alberta, British Columbia, and Nova Scotia consolidates previous legislation in these prov-

inces with some provisions from the Labour Relations Regulations and further modifications. In Quebec and Saskatchewan, statutes of 1944 cover the same subject-matter with considerable variation.

New Legislation in the United States Concerning Collective Bargaining and Labour Disputes

Labour-Management Relations Act, 1947

THE U.S. Labour-Management Relations Act, 1947, commonly called the Taft-Hartley Bill from the sponsors in the Senate and House of Representatives respectively, became law on June 23. Like the War Labour Disputes Act, 1943, it was enacted after it had been vetoed by the President of the United States.

Briefly stated, the Labour-Management Relations Act amends the National Labour Relations Act, 1935, which dealt with disputes concerning trade union organization and collective bargaining, and sets out procedure for dealing with all other kinds of disputes between employers and employed, distinguishing those creating a "national emergency". Significant provisions list as unfair certain practices on the part of employees; make unions liable for violation of a collective agreement; permit, on certain conditions, a union shop; allow the check-off of union fees if each member makes a written assignment; permit employers, on specified conditions, to contribute to union welfare funds administered jointly by the employer and union; prohibit strikes over the renewal of an agreement during a 60-day period and, also, strikes to induce a boycott, or to require an employer to bargain with an uncertified union, or to force an employer to transfer work from members of one union to members of another; permit injunctions to be issued by the Courts in certain classes of disputes; forbid unions contributing funds for federal political campaigns; and prohibit strikes by Government employees.

Legislative History

The Act is based on a compromise agreed to on May 29 by a Conference Committee of both Houses. Several provisions of the Hartley Bill passed by the House of Representatives on April 18 were struck out, and some, also, from the Taft Bill passed by the Senate on June 6. Three of the ten Conference members voted against the Bill; two recommended that the President should veto it on the ground that it was too restrictive and one considered that it did not go far

enough. The agreed Bill was adopted by 54 to 17 in the Senate and 320 to 79 in the House.

After the President's veto the Bill was again passed by the Senate by 68 to 25 and by the House by 331 to 83, both majorities exceeding the two-thirds necessary to override the President.

President's Message of Disapproval

President Truman in his message to Congress on June 20 emphasized the increasing measure of Government intervention in economic affairs which the Bill contemplated, its unworkable nature, as he saw it, and inequitable provisions. He said:—

I share with Congress the conviction that legislation dealing with the relations between management and labour is necessary. I heartily condemn abuses on the part of unions and employers and I have no patience with stubborn insistence on private advantage to the detriment of the public interest. But this Bill is far from a solution of those problems. . . .

The Bill taken as a whole would reverse the basic direction of our national labour policy, direct the Government into private economic affairs on an unprecedented scale, and conflict with important principles of our democratic society. Its provisions would cause more strikes, not fewer. It would contribute neither to national peace nor to economic stability and progress. It would be a dangerous stride in the direction of a totally managed economy. It contains seeds of discord which would plague this Nation for years to come. . . .

I find that this Bill is completely contrary to that national policy of economic freedom. It would require the Government, in effect, to become an unwanted participant at every bargaining table. . . . It would superimpose bureaucratic procedure on the free decisions of local employers and employees. . . .

The Bill time and again would remove the settlement of differences from the bargaining table to courts of law. Instead of learning to live together, employers and unions are invited to engage in costly, time-consuming litigation, inevitably embittering both parties. The Congress has, I think, paid too much attention to the inevitable frictions and difficulties incident to the reconversion period. . . .

I have concluded that this Bill would prove to be unworkable. The so-called "emergency procedure" for critical nation-wide strikes

would require an immense amount of government effort but would result almost inevitably in failure. The National Labour Relations Board would be given many new tasks, and hobbled at every turn in attempting to carry them out.

The Bill prescribes unequal penalties for the same offence. . . . Much has been made of the claim that the bill is intended simply to equalize the positions of labour and management. Careful analysis shows that this claim is unfounded. Many of the provisions of the Bill standing alone seem innocent but, considered in relation to each other, reveal a consistent pattern of inequality.

In the President's opinion, the Bill would increase strikes by discouraging unions from including "no strike" clauses in their agreements since they would be liable for damages for any "wildcat" strike engaged in by any of their members and by imposing burdensome reporting requirements on them and penalizing them for failure to furnish information by depriving them of the benefits of the National Labour Relations Act. In limiting the area of collective bargaining, making difficult agreements for union security and for welfare funds, the Bill

disregards the voluntary development in the field of industrial relations in the United States over the past 150 years.

The Bill, he believed, would expose industry to frequent interruptions by encouraging more elections and jurisdictional disputes, by substituting damage suits for machinery established by agreement, and by weakening unions so that they would not control their members.

Unfairness to workers, he saw, in the ease with which employers could get rid of those they wished to discharge on account of union activity, in depriving strikers, who have been replaced, of a vote in bargaining elections, in the litigation to which unions are to be exposed even though the charges prove groundless, in depriving workers of their right to meet competition by boycotting goods produced under sweat-shop conditions, and finally, in the superficially equitable manner in which union members are made legally responsible agents of the union in the same way as the employer's agents.

The President found the provisions for handling disputes unworkable and discriminatory, based on erroneous assumptions. He stated:—

We have learned by experience, however, that strikes in the basic industries are not called in haste, but only after long periods of negotiation and serious deliberation; and that in the secret-ballot election the workers almost always vote to support their leaders. . . . I have concluded that the Bill is a clear threat to the successful working of our democratic society.

One of the major lessons of recent world history is that free and vital trade unions are a strong bulwark against the growth of totalitarian movements. We must, therefore, be everlastingly alert that in striking at union abuses we do not destroy the contribution which unions make to our democratic strength.

This Bill would go far toward weakening our trade union movement. And it would go far toward destroying our national unity. By raising barriers between labour and management and by injecting political considerations into normal economic decisions, it would invite them to gain their ends through direct political action. I think it would be exceedingly dangerous to our country to develop a class basis for political action.

I cannot emphasize too strongly the transcendent importance of the United States in the world to-day as a force for freedom and peace. We cannot be strong internationally if our national unity and our productive strength are hindered at home. Anything which weakens our economy or weakens the unity of our people—as I am thoroughly convinced this Bill would do—I cannot approve.

Strikes

As regards strikes, the Labour-Management Relations Act reproduces, with important changes, some provisions of the War Labour Disputes Act. A sharp distinction is made between strikes which create a "national emergency" and others.

Federal Mediation Service

To aid in settling strikes a new Federal Mediation and Conciliation Service is created. Sixty days after the passage of the Act this new agency will replace the Conciliation Service of the Department of Labour. The Director of the new Service is to be appointed by the President with the consent of the Senate. Thus, labour disputes are to be no longer the concern of the Secretary of Labour and his Department. But the Bureau of Labour Statistics must make available to the new Service, as well as to employers and workers, all available information which may assist in settling disputes and to keep ready for inspection a file of collective agreements and information concerning proceedings for adjusting disputes.

If a dispute threatens substantially to interrupt commerce, the Service may proffer its good offices without waiting to be asked, but disputes affecting inter-State commerce only to a minor extent are to be left to State agencies if these are available.

If the Director fails within a reasonable time to bring the parties to agreement, he is to urge them voluntarily to seek other means of settling the dispute without recourse to other coercion and he is to submit to the employees the employer's last offer of settle-

ment for approval or rejection in a secret ballot.

No provision is made for arbitration. The Act is content with stating that final adjustment by a method agreed upon by the parties is the desirable method for settling differences over an existing agreement. In such disputes the Service is directed to make its offices available "only as a last resort and in exceptional cases".

To advise on how to avoid industrial controversies, the Act provides for a National Labour-Management Panel of twelve members, appointed by the President, equally representative of management and labour and each member outstanding in his own field.

Disputes Creating a National Emergency

As regards a dispute creating an emergency, which is defined as one which affects the whole or a substantial part of an industry engaged in inter-State or foreign commerce or producing goods for inter-State shipment and which imperils or is likely to imperil the national health and safety, the President is to appoint a board of three members to submit to him a factual statement concerning the dispute but to make no recommendations. On the basis of this report, the President may direct the Attorney-General to petition the District Court concerned for an order restraining a stoppage of work for not more than 80 days.

During the 80-day period when a stoppage is restrained, the parties are required to make every effort to settle their differences, but the President is to reconvene the board of inquiry which, if the dispute is not settled in the meantime, is to report to him within 60 days the position of the parties and the employer's last offer. This report is to be published within the next 15 days and the N.L.R. Board is to take a ballot on the question of accepting the employer's offer. Within another five days, the results of the ballot are to be certified to the Attorney-General and the latter is to move for the discharge of the injunction. The President, then, is to report fully to Congress on the whole proceedings, making, if the dispute continues, such recommendations as he thinks fit "for consideration and appropriate action".

Legal Consequences of Strikes

Certain kinds of strikes have special legal consequences. Any act in violation of a collective agreement renders a union liable to be sued for breach of contract and if the agreement has a "no-strike" clause which is violated, the employer may not only bring suit for damages but may seek from the Court a restraining order.

A strike, and the term includes a slow-down, during the 60-day period of notice which the Act requires to be given in order to terminate an agreement or to change its conditions, makes the strikers, unless they are re-hired, liable to lose their status as employees and to forfeit the protection of the Act.

A jurisdictional strike or boycott may be an unfair labour practice under the National Labour Relations Act as amended, and unless the unions themselves settle the matter within 10 days, it may be investigated and decided finally by the National Labour Relations Board. This provision is designed to put pressure on unions to compose inter-union differences.

Certain classes of strikes and boycotts are declared unlawful and constitute unfair labour practices. It is an unfair practice for a labour organization or its agents to participate in or to encourage others to participate in a strike or boycott which has for its purpose: to force an employer or self-employed person to join any labour or employers' organization; or to force an employer or other person to cease dealing in the products of any other person or doing business with any other person; or to force any employer, not their own, to bargain with an uncertified labour organization; or to force an employer to bargain with a particular union when another has been certified; or to force an employer to assign particular work to employees in a particular union or craft unless the employer is failing to obey an order of the Board covering such work. These provisions do not make unlawful the refusal of any person to enter premises of an employer other than his own, if there is a legal strike there. The Act thus recognizes the workers' right to refuse to cross a picket line about another employer's premises.

To a complaint involving such a strike or boycott, the Board must give priority, and if a preliminary investigation leads it to believe the charge well-founded, the Board's agent must immediately petition a federal Court for a temporary injunction. Notice must be given to the person charged and opportunity to present testimony. But the Court may, without notice, issue an order valid for five days, if the petition alleges that "substantial and irreparable injury" to the complainant will be unavoidable. Thus, employees engaging in these unlawful strikes and boycotts, as in strikes in violation of an agreement, are not protected by the Norris-LaGuardia Act, 1932, which forbids the use of injunctions in labour disputes.

Strikes by persons employed by the federal Government or any of its agencies, including

federal corporations, are made unlawful. Any such striker is liable to immediate dismissal and loss of civil service status, if any, and he is rendered ineligible for federal employment for three years.

National Labour Relations Act Amended

The Labour-Management Relations Act, in amending the National Labour Relations Act, 1935, makes important changes in the matter of collective bargaining and agreements, as well as in the privileges of labour organizations.

The 1935 Act which was intended to aid in bringing about industrial peace by encouraging collective bargaining in industries engaged in or producing goods for shipment in interstate commerce, defined certain unfair labour practices on the part of employers which limited their right to hire and fire when they acted with a view to encouraging or discouraging union membership or activity and required them to negotiate with the representatives of the majority of their work-people or a majority of a particular class of their employees, laid down rules for settling disputes over the organizing rights of trade unions and their representation in bargaining, and established the National Labour Relations Board of three independent members to determine questions arising under the Act.

This statute is now amended to restrict its protection to registered trade unions. Both local and parent organizations must have furnished the Secretary of Labour with up-to-date copies of their constitutions and by-laws, the names and salaries of their officers, a statement showing the manner of appointment of their officers, the initiation and membership fees, a financial statement for the year and full details concerning union administration and proceedings. In addition, the union must provide their members with their annual financial report. No union which has failed to make these annual returns may be certified as bargaining agent and no charges made by it may be received by the Board.

Further, the protection of the Act is denied to a union which has not filed with the Board, within the preceding twelve months, an affidavit by each of its officers, local and national, that he is not a member of the Communist Party or affiliated with that Party, and that he is not a member or a supporter of any subversive organization.

A new provision concerning supervisors arises from conflict between the federal and some State laws. A "supervisor" may be a member of a labour organization but no employer, subject to the Act, may now be compelled to consider supervisors as employees for the purpose of any law, national or State,

concerning collective bargaining. (See *Bethlehem Steel v. New York Labor Relations Board*, U.S. Supreme Court, L.G., June, 1947).

The National Labour Relations Board is to have five members. But by stipulating that the Board is to have a General Counsel, appointed by the President subject to the Senate's confirmation, who is to act in the name but independently of the Board and who is to have supervision over the Board's legal staff and regional offices and to have final authority over the investigation of charges and the issuance of complaints of unfair practices, the Act takes from the Board some of its most important functions. The General Counsel can decide what cases are or are not to be brought before the Board.

Unfair Labour Practices

Designed to balance the unfair labour practices on the part of employers which were defined in the N.L.R. Act are set out certain practices on the part of labour organizations.

The unfair practices of employers are modified to stipulate that the expression of any views or arguments or their dissemination is not to constitute interference with or coercion of employees if the expression contains no threat of reprisal or force or promise of benefit.

Further, the 1935 clause forbidding an employer discriminating in regard to hire and terms of employment in order to encourage or discourage union membership excepted a closed-shop agreement. The 1947 Act bans a closed shop and permits a union shop on certain conditions, but not in a State where State law forbids such agreements. Membership in a union may be required only 30 days after employment or after the date of the agreement, whichever is the later, and, further, the Board must certify that a majority of the employees eligible to vote for representatives have voted to authorize a union-shop agreement. No such agreement may be applied so as to permit an employee to be penalized if he was denied admission to the union on the same conditions which are applicable to others, or if he was expelled from the union for any other reason than failure to pay his dues. Some unions exclude certain classes, for example Negroes; others provide for Class B locals.

These provisions concerning union security do not apply to agreements signed before the enactment of the Act or to agreements for one year or less which are signed during the 60-day period between the enactment and the effective date of the statute.

Six unfair labour practices on the part of a labour organization are set out, including

the refusal to bargain collectively and participating in or encouraging others to take part in a strike or boycott with one of the four purposes set out above. It is unfair for a labour organization or its agents to restrain or coerce employees in the exercise of their rights of organization but this prohibition is not to interfere with an organization's right to make its own membership rules. Unfair, too, are the following: (a) causing or trying to cause an employer to discriminate against an employee who has been refused membership in the organization or been expelled for some reason other than failing to pay his fees; (b) charging initiation fees in a union with a union-shop agreement which the N.L.R. Board considers excessive or discriminatory under the circumstances; and (c) exacting or trying to exact from an employer money or any other thing of value for services which are not performed or to be performed.

Prevention of Unfair Practices

Co-operation with State agencies is provided for in handling cases of local interest. The Board is authorized to grant to State agencies, by agreement with them, jurisdiction over cases in any industry, other than mining, manufacturing, transport and communication except where these are predominantly local, provided that the State law on the matter is not inconsistent with the federal Act.

Charges of unfair practices made more than six months after the occurrence may not be entertained by the Board except when the delay arises from service in the armed forces. Further, the Board is bound to observe the rules of evidence which apply to proceedings in federal District Courts.

Other changes made in the Boards procedure in unfair practice cases: (1) require the Board's findings to be based on "the preponderance of the testimony", rather than on "all the testimony"; (2) permit orders for back pay to be paid to employees discriminated against to be directed to unions as well as to employers, according to who was responsible for the discrimination; (3) require the Board, where the employer is charged with interference or domination of a union, to apply the same rules regardless of whether the labour organization is independent or affiliated with a national or international union; (4) require a Board member or agent taking evidence to furnish the parties with a copy of the proposed report, to which objections may be made within 20 days or any longer period allowed; and (5) forbid the Board ordering reinstatement or back-pay for an employee who was suspended or dismissed for cause.

Bargaining Representatives and Elections

The powers and policies of the Board are changed in respect to bargaining representatives and elections to determine them.

The 1935 Act permitted a single employee or a group to place grievances before the employer but the representatives chosen by the majority had the exclusive right to represent the employees in the particular unit in negotiating with the employer, and the Board has considered that the representative had exclusive right to adjust grievances, although it permitted the aggrieved person to be present at the discussion. The new Act stipulates that grievances may be adjusted without intervention of the representative if the adjustment is not inconsistent with the agreement and if the representative is allowed to be present.

In determining what is an appropriate bargaining unit, the Board is directed to make certain changes in its policy. The 1935 Act provided that in order to assure the workers the fullest freedom in exercising their rights under it, the Board was to decide whether the unit proposed should be an employer, craft or plant unit or a subdivision of one of these. The Board's practice has been not to permit a separate craft unit where there was no history of collective bargaining by a craft before the workers were organized industrially.

Craft workers in future may not be included with others merely on the ground that the Board previously decided that they should, unless a majority of them vote against separate representation. On the other hand, "professional" workers may not be included in a unit with others unless they vote in favour of such inclusion. As regards plant guards, the Act states that they may not be associated in the same bargaining unit with other employees but, it adds, that no labour organization may be certified to represent guards if it admits others or if it is affiliated with an organization admitting others.

In determining questions concerning representation, the 1935 Act gave the Board discretion. Its policy has been to accept a union's petition for an election when there was some evidence that the union had a substantial membership among the employees and to accept an employer's petition only if two or more unions claimed to represent the employees. The new Act directs the Board to entertain petitions from employers for an election whenever any union or individuals claim recognition and, also, to accept petitions from employees to have a union or an individual certified or "decertified" as their bargaining representative. Further, the Board

is directed, in effect, to abandon the practice of refusing a place on the election ballot to a company-dominated organization or the successor of such an organization.

Other new provisions concerning representatives stipulate that no employees on strike, who have been replaced, may vote; that an election may not be directed in any unit within twelve months of an election, and that in determining whether a unit is appropriate, the extent to which the employees are already organized shall not be "controlling".

An election to determine whether a majority of the eligible voters desire a union shop, under the conditions described above, is to be conducted by the Board if the union requests it and if the union alleges that 30 per cent or more of the employees favour a union shop. Such an election may not be held at the same time as an election for representatives or within a year of an election concerning a union shop.

Suits Against Unions—Restrictions on Union Conduct

Several restrictions imposed on labour organizations and workers by the Act may be noted here, including some referred to above. Trade unions and their agents are made liable to suit for breach of contract, and for damages arising from strikes or boycotts designed for the particular purposes indicated earlier in this article. Employers are forbidden to make any payments, with certain exceptions, to employees' representatives.

If a contract between an employer and a labour organization, or between labour organizations, is violated, suit may now be brought by the aggrieved party without regard to the ordinary criteria, the amount in controversy or the citizenship of the parties. The action may be brought in the federal court in the district where the union has its principal office or where its officers or agents are acting for the employees, and the union is made a party to the proceedings. Moreover, a labour organization and an employer are to be bound by the acts of their agents, and the acts of an "agent" for the purpose of this section need not have been previously authorized or later ratified. A trade union may be sued as an entity not only by the employer but by any aggrieved person, and its assets made answerable for damages, but not those of its individual members.

Exempt from the ban imposed on payments by employers to employees' representatives and on the receipt of such payments, are, in addition to payments for services and

for commodities at ordinary market prices: (a) deductions for union dues (the check-off) if individual employees have made a written assignment for not more than one year or for the life of the agreement whichever is the shorter; (b) contributions to welfare funds established by a union and jointly administered by agreement between the employer and employees, together, if the parties wish, with some jointly chosen persons or with an umpire chosen by a District Court to break any deadlock. Payments may be made only for the benefit of the employees of the employer concerned, and their dependents, or of such employees jointly with those of other employers making similar payments, provided that the agreement sets out fully the basis on which the benefits are to be paid; that payments are held in trust for medical or hospital care, retirement or survivors' pensions, compensation for occupational accidents or diseases, or insurance for any of the foregoing, unemployment benefits, life insurance, disability, sickness or accident insurance; and provided that there is an annual audit and that the funds for employees' pensions are kept separately.

No provision concerning payments to representatives applies to a contract in effect when the Act was passed until such contract expires or until July 1, 1948, whichever is the earlier. Further, welfare funds are not required to be jointly administered if they were established by agreement before January 1, 1946, and funds providing, before January 1, 1947, for pooled vacations are not to be considered as violating the above stipulations. The latter clause excepts the Industrial Ladies' Garment Workers' Union welfare plans.

In prosecutions for payments to employee representatives contrary to the Act, the protection given to unions by the Clayton Anti-Trust Act, 1914, and the Norris-Laguardia Act, 1932, is removed. Federal courts may issue injunctions restraining violations.

For the recovery of losses, including court costs, which were suffered by reason of a boycott or strike, unlawful because it had one of the four objects set out above, suit may be brought against a union in a federal court without respect to the amount in controversy. This provision took effect on the date of enactment of the Act. The Board may seek an injunction to restrain such a strike or boycott but not until after August 22.

The ban on political contributions by labour organizations imposed by the Corrupt Practices Act, 1925, as amended, is enlarged to outlaw "expenditures" as well as "contributions", and to apply the section to primary elections and caucuses as well as National elections.

Post-War Trend of Real and Money Earnings in Manufacturing in Canada

FOLLOWING V-E Day, there was a steady decline in real weekly earnings in Canada which continued throughout the rest of 1945, and on into 1946. A moderate recovery, beginning by June, 1946, brought real weekly earnings at May 1, 1947 to 94 per cent of what they were in the week before May 1, 1945.

"Real" earnings are calculated by taking into consideration the trends in both money earnings and the cost of living. The index of average weekly earnings, adjusted to allow for changes in the cost-of-living index, produces an index of real weekly earnings.

The following article, prepared by the Research and Statistics Branch, Department of Labour, deals with the changes that have taken place since V-E Day in average hourly earnings, average hours worked, average earnings of wage earners in the manufacturing industry.

These changes are shown statistically in Table 1 and graphically in Chart 1.

Reference also is made to the long-term changes in real annual earnings, as shown in Table II and Chart II.

Wage Rates and Earnings

There are various sources of data on wage rates and earnings, whose meaning should be carefully distinguished.

The word "wages" is sometimes loosely used to mean either "wage rates" or "earnings", two terms which have quite different meanings. A manufacturer may pay a *wage rate* of 70 cents an hour; however if his workers put in a good deal of overtime at time-and-a-half their *average hourly earnings* will be higher than 70 cents. Both these terms convey useful information, but their meanings should not be confused.

During the war average hourly earnings increased considerably more than did wage rates. Much overtime was worked, but also more wage-earners worked at the higher wage rates than formerly. Thus the "average" earnings were higher than before the war when a greater number of workers were working at the lower wage rates. Correspondingly, hourly earnings dropped for a while after the war as overtime was reduced and as the proportion of wage-earners employed at the various wage rates changed, although wage rates did not change to any extent.

Statistics showing average weekly earnings are calculated by multiplying average hourly earnings by the number of hours worked in a week. Thus they are likely to fluctuate more than those for hourly earnings, since they introduce a new variable factor, the number of hours worked in the week.

Statistics of annual earnings vary with the amount of time worked during the year. Wage rates might conceivably be high during a year when annual earnings are low, because the length of time worked was not great. On the other hand, a comparatively low wage rate, combined with continuous employment, might result in annual earnings which compared favourably with those of a year of intermittent employment and high wage rates.

It must be emphasized that neither weekly earnings nor annual earnings reflect the amount of employment, or unemployment in the country. The series show only the average payments to wage earners who are employed.

The sources for information on wages and hours in Canada are as follows:—

1. *Annual Report on Wage Rates and Hours of Labour*.—This report is issued by the Department of Labour. It shows the rates of wages and the normal hours scheduled by employers in a variety of industries. It also includes index numbers of wage rates.

2. *The Employment Situation together with Payrolls* (as reported by employers having 15 or more employees).—Issued monthly by the Dominion Bureau of Statistics, this report is summarized in the *LABOUR GAZETTE*. From the totals of weekly payrolls and of persons employed, the average per capita weekly earnings are calculated. This average includes both wage-earners and salaried employees.

3. *Statistics of Average Hours Worked and Average Hourly Earnings*.—Issued monthly by the Dominion Bureau of Statistics and summarized in the *LABOUR GAZETTE*, this report also is based on information supplied by employers in manufacturing. It gives average weekly hours worked, average hourly earnings, and (as a product of these figures) average weekly earnings. The figures apply to wage-earners.

4. *The Manufacturing Industries of Canada*.—Published annually by the Dominion Bureau of Statistics, and containing data on annual earnings for wage-earners.

* Figures adjusted for holidays. The actual figures are: January 1, 1945, 39.6 hours, \$27.72; April 1, 1945, 43.6 hours, \$30.69; January 1, 1946, 38.1 hours, \$25.87; January 1, 1947, 38.1 hours, \$29.03.

TABLE II.—THE TREND OF REAL YEARLY EARNINGS OF WAGE EARNERS IN MANUFACTURING IN CANADA, 1917-1946

(Source: Dominion Bureau of Statistics, and Research and Statistics, Dept. of Labour)

Year	Average Yearly Earnings (\$)	Index Numbers (1935-39=100)		
		Average Yearly Earnings	Cost-of-Living	Real Average Yearly Earnings
1917	762	81.7	102.4	79.8
1918	879	94.3	115.6	81.6
1919	939	100.7	126.5	79.6
1920	1,106	118.6	145.4	81.6
1921	996	106.8	129.0	82.2
1922	935	100.3	120.4	83.3
1923	955	102.4	120.7	84.8
1924	968	103.8	118.8	87.4
1925	967	103.7	119.8	86.6
1926	999	107.1	121.8	87.9
1927	990	106.2	119.9	88.6
1928	1,021	109.5	120.5	90.9
1929	1,042	111.8	121.7	91.9
1930	995	106.7	120.8	88.3
1931	950	101.9	109.1	93.4
1932	844	90.5	99.0	91.4
1933	777	83.3	94.4	88.2
1934	830	89.0	95.7	93.0
1935	870	93.3	96.2	97.0
1936	896	96.1	98.1	98.0
1937	965	103.5	101.2	102.3
1938	956	102.5	102.2	100.3
1939	975	104.6	101.5	103.1
1940	1,084	116.3	105.6	110.1
1941	1,220	130.8	111.7	117.1
1942	1,383	148.3	117.0	126.7
1943	1,525	163.6	118.4	138.2
1944	1,564	167.7	118.9	141.0
1945	1,569*	168.3*	119.5	140.8*
1946	1,526*	163.7*	123.6	132.4*

* Yearly earnings for 1945 and 1946 have been estimated.

Post-War Trend of Hourly Earnings

As war industries, which paid higher than average hourly rates, terminated production and closed down, the average hourly earnings of a wage-earner employed in manufacturing fell from 70.5 cents in the payroll period preceding May 1, 1945, to a low point of 67.0 cents by December 1, 1945. This downward trend reflects not so much an actual cut in the wage rates paid as a change in the number of workers in industries which were paying a high hourly rate and in industries which were paying a low hourly rate. The latter were employing a greater and greater proportion of the total wage-earners in manufacturing.

The first half of 1946 saw an increase of hourly earnings so that, by July, there had been a return to the level of July 1, 1945. This reversal in trend was due partly to increased employment, proportionately, in the heavy industries, which pay a higher than average rate, and partly to higher rates of pay in both light and heavy industry.

In the latter half of 1946, wage rate increases were the chief cause of the continuation in the steady climb of hourly earnings. By January, 1947, with most strikes settled and with wage control terminated, the rise was levelling off.

Hourly earnings were 7.8 cents higher in the week preceding May 1, 1947, than in the week preceding May 1, 1945. From the low of December, 1945, to May, 1947, hourly earnings increased by 11.3 cents.

Weekly Hours Worked

Average hours worked per week for wage-earners in manufacturing industries showed a less marked downward trend during the latter part of 1945 than average hourly earnings. The figures are shown in Table I.

The drop in average hours worked per week between May and September, 1945, was largely because of a decline in overtime. Work stoppages, caused by material shortages or labour disputes, caused some fluctuation in hours worked per week throughout 1946. However, by 1947, the trend had steadied. There had been a reduction of, roughly, 1½ hours in the work-week from the autumn of 1945 to the spring of 1947. This reduction can be largely attributed to labour-management agreements.

The effect of these concomitant movements in average hourly earnings and average hours worked per week on the income of the worker can most easily be seen by taking a look at the trend of average weekly earnings, which is the product of the two factors.

Post-War Trend of Weekly Earnings

Weekly earnings, after the initial drop between May 1 and June 1, 1945, declined gradually throughout the last six months of 1945. The lowest mark was reached by the end of the spring of 1946. A steady rise throughout the remainder of 1946 and on into 1947 brought weekly earnings to \$33.83 by May, 1947, to compare with \$32.08 in the week preceding May 1, 1945.

There is little meaning, however, in comparing earnings at different periods of time unless allowance is made for changes in the purchasing power of money. Each dollar a worker has may be buying more or less food, more or less clothing, shelter, or amusement than it formerly did. Money earnings adjusted for this change in dollar value will give an approximation of "real" earnings or "the quantity of the necessities and conveniences of life" that are given in exchange for labour.

The Cost-of-Living Index and its Meaning

How should adjustment be made for changes in the value of the wage-earner's dollar? If the price of ships has doubled, the purchasing power of money in respect to ships has halved. But to the average worker it is of no immediate concern that dollar value has diminished in this way. Only when the price of the goods he buys has increased does the value of his dollar shrink. A measurement of changes in the prices of goods and services purchased by the average wage-earner must, therefore, be determined.

In the year 1938, the Dominion Bureau of Statistics conducted a survey to determine how the average wage-earner disposed of his income. Upon this basis, an average family budget was drawn up to show the money cost of the goods consumed and the services utilized. At regular intervals since that time the money cost of the same goods and services was measured and an index, the cost-of-living index, was constructed showing changes in the average unit prices of these consumer goods and services.

The cost-of-living index, therefore, measures the change in the retail prices of a "fixed basket of goods". It is by means of this index that average weekly earnings can be adjusted to allow for changes in the purchasing power of money. The adjustment consists of dividing the indices of average weekly earnings by the respective cost-of-living indices, thereby obtaining an index of "real" average weekly earnings.

Post-War Trend of Real Earnings

Beginning in the spring of 1946, the purchasing power of the wage-earner's dollar was forced steadily lower by a decided rise in the Canadian cost-of-living. As the number of dollars in the weekly pay envelope diminished, therefore, the amount which each dollar would buy also decreased. This is shown in the trend of real earnings as depicted in Table I.

Following V-E Day, there was a steady decline in real weekly earnings which continued throughout the rest of 1945, and on into 1946. A moderate recovery, beginning by June, 1946, brought real weekly earnings at May 1, 1947 to 94 per cent of what they were in the week before May 1, 1945.

The post-war trend of real earnings in Canada has two marked differences from the trend in the United States—the drop after V-E Day was not so sharp in Canada as in the U.S. and the recovery movement, which was evident in Canada by the summer of 1946, was not apparent in the U.S. by the spring of 1947. A comparison of real weekly earnings between the two countries shows that the lowest point in the American trend was reached in November of 1946 when real earnings were 84 per cent of what they were in May, 1945. The low point in the Canadian trend was reached at the beginning of June, 1946, when real earnings were 87 per cent of what they were at the beginning of May, 1945. The latest available figures for the United States (March, 1947), reveal that real earnings are still only 85 per cent of May, 1945 earnings, whereas Canadian real earnings, have already increased to 94 per cent of real earnings at May 1, 1945.

However, since the period of time which has been selected for study—from the end of the war in Europe to the present—shows only a small part of the long-run trend of real earnings, no estimate of the meaning of these post-war fluctuations can be made by studying just this isolated section of the trend.

The Long-run Trend of Real Earnings

There are no statistics available on average weekly earnings of wage-earners in manufacturing which will continuously cover the pre-war, wartime and post-war periods. The only indication of changes in average earnings during these three periods is the series on average yearly earnings. The earliest available figure is that for 1917. These figures are presented in Table II, and shown graphically in Chart II.

Real average yearly earnings show a general upward trend from 1917 to 1939, in spite of the impact of the depression in the Thirties. Over the 22 years, there was an average increase of 1.2 per cent a year.

An index of real average yearly earnings (average 1935-39=100) reveals a rise from 79.8 in 1917 to 82.2 in 1921 and to 93.4 in 1931. The index fell during the depression years to a low of 88.2 in 1933, and then rose steadily to 103.1 in 1939. The drop during the depression years was comparatively small, since the cost-of-living index fell almost as much as did the index of money earnings. It should again be noted that fluctuations in employment and unemployment have no direct effect on the index of earnings.

This long-term rise in real earnings is significant of an expanding economy. Increased utilization of resources and increased productive efficiency contributed to greater production which was distributed throughout the economy by greater payments to capital and management, greater payments to labour, and, to some extent, by lower prices to consumers.

The war, with the accompanying abnormal rate of utilization of the nation's resources and the tremendous growth in capital equipment, altered this long-run trend.

After 1939, therefore, real average yearly earnings shot up to all-time heights; the aforementioned index reached a peak of 141.0 in 1944. During these war years, the average increase was 6.5 per cent a year, much of the increase being due to large numbers of workers moving to higher-paid war jobs, as well as to increases in rates of wages. Complete information on yearly earnings is not available for 1945 and 1946. On the basis of the data at hand, however, it is possible to estimate that 1945 saw very little change in the level of real average yearly earnings in manufacturing. The estimated index for 1945 was 140.8, only slightly below that for 1944.

As mentioned earlier, 1946 saw a fairly sharp drop in real average weekly earnings and, therefore, in real average yearly earnings. It is estimated that there was a decline in the latter of about 6 per cent, with the index falling to 132.4 in 1946.

The drop in real weekly earnings throughout the latter part of 1945 and the first half of 1946, together with the recovery movement in the last part of 1946, are the preliminary fluctuations in the establishment of the post-war trend, the direction of which cannot as yet be described in any definitive manner.

Housing Activity in Canada and United States

HOUSING activity in both Canada and the United States, according to recently published reports, has levelled off as a result of rising construction costs.

In Canada new housing units brought under construction during the first four months of this year were "considerably below" the number started in the same period of 1946, the Crown-owned Central Mortgage and Housing Corporation reported in its quarterly magazine, *Housing in Canada*:

The publication estimated 7,580 "starts" had been made on houses between January 1 and April 30 in cities and municipalities with populations of more than 5,000. Although comparable data was not available for 1946, some indication of the relative position was given in the series of residential contracts awarded. These totalled \$34,600,000 in the first quarter of 1947 and \$55,600,000 in January-April, 1946.

The magazine noted "increasingly evident buyers' resistance" to current high costs of construction. Causes of the low level of new housing units, it said, were restricted supplies of labour and material, a large carry-over from 1946 and unseasonable weather.

Apart from steel piping, production of most critical building materials during the first quarter was "well above" figures for the same period last year.

Costs of housebuilding continued to rise during the first quarter and at the end of April were estimated at six per cent above costs at the close of 1946.

The housing report also noted the abnormally high rate of family formation in Canada during the war years and continuance of the rising birth rate. Registrations of births in municipalities of 10,000 and up showed a 37 per cent increase in 1946 over the average of the preceding seven years. The 1946 figure was 161,000 compared with the average 117,200. In the first quarter of this year, 44,900 births were registered compared to 33,900 in the corresponding period of 1946. The family formation rate was estimated at 65,000 annually.

United States

A levelling off in housing activity, caused by rising construction costs, was reported recently by the Bureau of Labour Statistics, United States Department of Labour.

"Interviews in 109 selected localities have revealed that the average veteran cannot afford to pay more than \$6,000 for a house," the Bureau stated. "Results of the Bureau's studies show that the median construction cost (excluding land costs and builders' profit), of the 1-family homes begun in the first quarter of this year was about \$5,250. One-fourth of the 1-family houses to be built were to cost private builders \$7,250 or more. Adding in land and other items, these costs mean selling prices typically ranging from \$7,000 to \$8,000 or more."

Housing construction in May was at about the same level as in April, and somewhat higher than in May, 1946. There had been a rapid increase in activity since the first of the year, but local building reports indicated that the April-May levels would not be exceeded during the remainder of the year.

During May, 1947 about 69,000 new permanent dwelling units were started in non-farm areas, as compared with 67,000 in May, 1946. At the beginning of 1947 it had been anticipated "that approximately 1,000,000 permanent units would be put under construction this year; the present outlook is for about 725,000. As against the original forecast of 950,000 completions, the Bureau now anticipates that approximately 765,000 units will be made ready for occupancy in 1947." ... "Taking account of the actual volume of construction activity during the first five months of the year and in light of the current cost situation, it is now estimated that expenditures for all new construction during 1947 will total approximately \$12 billion, including about \$4½ billion for housing. While this total is 22 per cent below the former estimate of \$15½ billion, it exceeds the amount spent last year by more than a fifth.

"Construction employment is expected to reach a maximum of about 2,000,000 early in the autumn, 300,000 more than in May and substantially better than last year's high.

"The Bureau's appraisal of future construction prospects is based on the assumption that wholesale prices of building materials will decline about 10 per cent by the end of the year, that wage rates on construction will rise only moderately, and that further modifications in the limitations on non-residential building will be made by mid-summer. It is assumed also that there will be no major work stoppages and that materials inventories will continue to improve."

Legislative Proposals of Railway Transportation Brotherhoods

ANTICIPATING that labour legislation embodying suggestions that they had made in March, 1946 (L.G. 1946, p. 447) would be introduced earlier in the 1947 session of Parliament, the Railway Transportation Brotherhoods postponed until May 29, the submission of their 1947 memorandum to the Government.

At the outset, the memorandum drew attention to the proposals made fourteen months earlier, and expressed their appreciation of the "favourable consideration given some of those items, including amendments to Sections 310 and 421 of the Railway Act." However, the memorandum reaffirmed a previous request that early consideration be given to amendments to the Customs Act to provide for "the removal of Customs duty and other tax imposed on material and equipment imported for use in the construction of crossing protection devices and signals." It was urged too, that "similar duties and taxes on material and equipment imported into Canada for the installation of automatic block signals" be removed. The Government was requested to authorize the Board of Transport Commissioners "to require railway companies to undertake early installation of automatic block signals on all railway lines (carrying) frequent and fast traffic," the better to protect human life and property.

St. Lawrence Waterways.—The memorandum reiterated the opposition of the Brotherhoods to the St. Lawrence Waterways Project. It was asserted that "its value to Canada is theoretical, its cost is very real, its need highly questionable and its effect must be viewed with concern . . . We have financial obligations as a result of the war which should deter such speculation and non-essential spending."

Old Age Pensions.—It was urged again that "the eligible pension age be reduced to 65 years and that the means test be raised to at least \$600 a year, without regard to resident property."

Income War Tax Act.—While expressing "particular interest" in recent budget proposals to amend the Income War Tax Act, the memorandum reaffirmed an earlier request that "the statutory exemptions be increased to \$2,400 and \$1,200 for married and single persons respectively." It urged further, that "all cases of pressing need brought to the attention of the Government, or Revenue Department, the refundable portion of the tax to the credit of such persons be remitted to them without unnecessary delay."

Scientific Medical Research.—Emphasis was given to the importance of early and favourable consideration of means to promote scientific medical research and urged "a careful exploration of every avenue and the discovery of every remedy available to the healing art."

Immigration.—The memorandum stated that the brotherhoods were in accord with "any such policy" on immigration as was announced in the House of Commons by Prime Minister King on May 1. Specific approval was expressed for a policy "that will encourage the selection of persons from the British Isles, Australia, New Zealand, South Africa and the United States," subject to the understanding that "immigration should be on a basis of qualification for assimilation with Canadian citizenship."

The following were members of the deputation: A. J. Kelly, Chairman of Committee, Brotherhood of Railroad Trainmen; Wm. L. Best, C.B.E., Secretary of Committee, Brotherhood of Locomotive Firemen and Enginemen; J. J. O'Grady, Brotherhood of Maintenance of Way Employees; W. H. Phillips, Vice-Chairman of Committee, Order of Railroad Telegraphers; H. B. Chase, C.B.E., Brotherhood of Locomotive Engineers; J. L. D. Ives, Order of Railway Conductors.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles concerning proceedings under the *Wartime Labour Relations Regulations*, P. C. 1003, and under the *Conciliation and Labour Act*.

The *Wartime Labour Relations Regulations*, P.C. 1003, are administered by the *Wartime Labour Relations Board (National)* in respect of those provisions relating to: the certification of bargaining representatives, the intervention of the Board for the purpose of obtaining conciliation services from the Minister of Labour, the establishment of procedures for the final settlement of disputes concerning the interpretation or violation of collective agreements, and the institution of prosecution proceedings.

The provisions of the Regulations relating to conciliation services are under the administration of the Minister of Labour and are provided to parties desiring to negotiate agreements through the formal intervention of the Board.

The *Wartime Labour Relations Regulations*, P.C. 1003, apply to employees and employers engaged in works, undertakings or businesses of an interprovincial, national or international nature and thus within the legislative authority of Parliament, including navigation and shipping, lines of steam or other ships, railways, airlines, canals, telegraph, telephone and radio communication,

ferries, and works situated in a province but which have been or may be declared by Parliament to be for the general advantage of Canada or two or more provinces.

The Board, with the approval of the Minister of Labour, has adopted rules or regulations which govern procedure in making the various types of applications invoking the provisions of the Regulations and the services of the Board. Copies of these procedural regulations and of the *Wartime Labour Relations Regulations*, P.C. 1003, may be obtained from the Department of Labour, Ottawa.

Proceedings under the Regulations are here described in two separate articles. The first deals with applications made to the Board for the certification of bargaining representatives and other services, and records the decisions reached in such matters; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also provided through the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act. This Act empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together and to appoint a conciliator or arbitrator when requested by the parties concerned.

Applications for Certification under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Board (National) met for two days during the month of June. During the month the Board received 18 applications, held 6 hearings, issued 9 certificates designating bargaining representatives, rejected 4 applications, ordered 7 representation votes. In view of the termination of arrangements with the various provincial authorities providing for appeal from the decisions of provincial Boards, the Board had no appeal proceedings before it during the month.

Applications for Certification Granted

1. *National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for marine engineers employed by the *Canadian Pacific Railway Company* on the ss. *Princess Helene* in the Bay of Fundy Service of the company. The chief engineer was excluded from the bargaining unit.**

* Following an investigation of the application.

** Following an investigation of the application and a representation vote.

2. *Brotherhood of Railroad Trainmen* and certain of its officers for freight brakemen, passenger brakemen, train baggagemen, yard foremen and yardmen employed by the *Ontario Northland Transportation Commission, North Bay, Ont.**

3. *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees* and certain of its officers for a group of clerical employees and timekeepers employed by the *Canadian Pacific Railway Company at Winnipeg, Weston and Brandon, Man., and Fort William and Kenora, Ont.* The chief clerk, senior clerk (accounting), chief timekeepers at Winnipeg and Weston shops, and the secretary to the General Accountant were excluded from the bargaining unit.**

4. *National Association of Marine Engineers of Canada, Inc.,* and certain of its officers for engineers, including the chief engineer, on vessels operated by the *British Columbia Lake and River Service of the Canadian Pacific Railway Company.***

5. *Division No. 4, Railway Employees' Department, American Federation of Labour* and the principal Canadian officers of the Division's eight component craft unions for some 32,500 employees of the following railways represented by the *Railway Association of Canada: Canadian National Railways, the Canadian Pacific Railway Company, the Dominion Atlantic Railway, the Esquimalt and Nanaimo Railway, the Quebec Central Railway, the Northern Alberta Railways Co., the Ontario Northland Transportation Commission, and the Toronto, Hamilton and Buffalo Railway Co.* The employees covered by the certification consist of blacksmiths, boilermakers, carmen, electricians, machinists, moulders, sheet metal workers, plumbers and steamfitters, and their helpers and apprentices, together with gang foremen and leading hands of the various crafts, all of whom are covered by Wage Agreement No. 6 between the *Railway Association of Canada and Division No. 4, Railway Employees' Department, A.F. of L.**

6. *Brotherhood of Railway Carmen of America* and certain of its officers for a group of roundhouse and shop employees of the *Midland Railway Company of Manitoba, Winnipeg, Man.* The master mechanic was excluded from the bargaining unit.

7. *System Adjustment Board and/or General Adjustment Committee, Atlantic Region, Canadian National Railways, Canadian Brotherhood of Railway Employees and Other Transport Workers* and certain of its officers for clerks and stenographers on the

staff of the Purchasing Agent of the *Canadian National Railways at Moncton, N.B.* The Chief clerk was excluded from the bargaining unit.*

8. *Seafarers' International Union of North America, Canadian District* and certain of its officers for the unlicensed personnel employed by the *Pacific Great Eastern Railway Company, Vancouver,* in the deck, engineroom and steward's departments of the tug *Pointe Ellice* and barge *Number Two.**

9. *Brotherhood of Locomotive Engineers* and certain of its officers for engineers handling steam or other classes of motive power employed in the Railway Traffic Department of the *National Harbours Board at Montreal.**

Representation Votes Ordered

1. *Canadian Seamen's Union and Local 3, Canadian Association of Maritime Transport Workers, Inc.,* applicants, and *Inter Island Steamship Company Limited, Montreal (L.G., May, 1947, pp. 661-662).* Following an investigation of the applications and a hearing of the parties, the Board ordered a vote of the unlicensed personnel, except the chief steward and chief cook, employed on the ss. *Island Connector* operated by the company. The names of both applicant organizations will appear on the ballot. Messrs. R. Trepanier and L. Pepin, Industrial Relations Officers, Dominion Department of Labour, Montreal, were appointed Returning Officers.

2. *Canadian Association of Maritime Transport Workers, Inc., Local 2, and Clarke Steamship Co. Ltd., Montreal (L.G., May, 1947, p. 661).* Following an investigation of the application and a hearing of the parties, the Board ordered a representation vote of the unlicensed personnel, except the chief steward and the chief cook, employed by the company on the ss. *North Voyager, ss. North Gaspe, and ss. North Shore.* The names of the applicant organization and the Canadian Seamen's Union will appear on the ballot. Messrs. R. Trepanier and L. Pepin were appointed Returning Officers.

3. *Canadian Seamen's Union and Canadian Association of Maritime Transport Workers, Inc., Local 5,* applicants, and the *Caribbean Steamship Co., Ltd., Montreal (L.G., May, 1947, pp. 661-662).* Following an investigation of the applications and a hearing of the parties, the Board ordered a representation vote of the unlicensed personnel, except the chief steward and the chief cook, employed by the company on the ss. *North Coaster.*

The names of both applicant organizations will appear on the ballot. Messrs. R. Trepanier and L. Pepin were appointed Returning Officers.

4. *Canadian Association of Maritime Transport Workers, Inc., Local 4, and The Magdalen Islands Transportation Company Limited, Montreal* (L.G., June, 1947, p. 795). Following an investigation of the application and a hearing of the parties, the Board ordered a representation vote of unlicensed personnel, except the chief steward and the chief cook, employed on the ss. *Magdalen*. Only the name of the applicant organization will appear on the ballot. Messrs. R. Trepanier and L. Pepin were appointed Returning Officers.

5. *National Association of Marine Engineers of Canada, Inc., and Upper Lakes and St. Lawrence Transportation Company Limited, Toronto* (L.G., June, 1947, p. 795). Following an investigation of the application and a hearing of the parties, the Board ordered a representation vote of the marine engineers, except chief engineers, employed on vessels operated by the company. Mr. F. J. Ainsborough, Industrial Relations Officer, Dominion Department of Labour, Toronto, was appointed Returning Officer.

6. *Canadian Association of Maritime Transport Workers, Inc., Local 6, and North Pioneer Steamship Company Limited, Montreal* (L.G., June, 1947, p. 795). Following an investigation of the application and a hearing of the parties, the Board ordered a representation vote of the unlicensed personnel, except the chief steward and the chief cook, employed by the company on the ss. *North Pioneer*. The names of the applicant organization and the Canadian Seamen's Union will appear on the ballot. Messrs. R. Trepanier and L. Pepin, Montreal, were appointed Returning Officers.

7. *Canadian Association of Maritime Transport Workers, Inc., Local 7, and Gulf Ports Steamship Company, Limited, Montreal* (L.G., June, 1947, p. 795). Following an investigation of the application and a hearing of the parties, the Board ordered a representation vote of the unlicensed personnel, except the chief cook, employed by the company on the ss. *Gulf Port*. Only the name of the applicant organization will appear on the ballot. Messrs. R. Trepanier and L. Pepin, Montreal, were appointed Returning Officers.

Applications for Certification Rejected

1. *Canadian Association of Railwaymen, Local Branch No. 82, and the Ontario Northland Transportation Commission, North Bay,*

Ont. (L.G., May, 1947, p. 661). Following an investigation of the application, a hearing of the parties and a representation vote, the application was rejected as not having the support of a majority of the employees affected.

2. *Quebec Longshoremen's Union, Local 1 (CCCL), and Albert G. Baker, Ltd., Anglo-Canadian Pulp & Paper Mills, Ltd., and Canadian Import Co., Ltd., Quebec, P.Q.* (L.G., May, 1947, p. 661). Following an investigation and a hearing of the parties, the Board rejected the three applications for the reason, among others, that the applicant organization had not shown that it had the support of a majority of the employees in a bargaining unit comprising all regularly employed longshoremen at the Quebec and Levis Harbour. Reasons for Judgment will be issued by the Board at a later date.

Applications for Certification Received during the month of June, 1947

1. *Canadian Brotherhood of Railway Employees & Other Transport Workers* on behalf of one clerk and three messengers employed in the WI Railway Telegraph Office, *Canadian National Railways, Winnipeg.*

2. *Brotherhood of Locomotive Engineers* on behalf of engineers handling steam or other classes of motive power employed by the *National Harbours Board at Montreal* (see under "Applications for Certification Granted").

3. *International Association of Machinists* on behalf of ground crew personnel employed in maintaining and servicing aircraft at *Dorval Airport, Dorval, P.Q., by Canadian Air Express Limited, Montreal.*

4. *Canadian Brotherhood of Railway Employees & Other Transport Workers* on behalf of bus drivers and garage employees below the rank of foreman employed by *Hull City Transport Ltd., Hull, P.Q.*

5. *Canadian Brotherhood of Railway Employees & Other Transport Workers* on behalf of agents, operators, shop employees and maintenance of way employees of the *Temiscouata Railway Company, Rivière du Loup, P.Q.*

6. *International Longshoremen's & Warehousemen's Union, Local 508,* on behalf of deepsea longshoremen employed by the *Empire Stevedoring Company, Vancouver, at the Ports of Chemainus, Crofton and Nanaimo, B.C.*

7. *International Longshoremen's & Warehousemen's Union, Local 508,* on behalf of deepsea longshoremen employed by the

Canadian Stevedoring Company, Vancouver, at the Ports of Chemainus, Crofton and Nanaimo, B.C.

8. *Canadian Seamen's Union* on behalf of unlicensed personnel of the deck, engine room and steward's departments of the tanker *Britamerican* operated by the *Canadian Transport Company, Vancouver*.

9. *Hull City Transport Employees' Syndicate* on behalf of drivers, garage workers, office workers, except inspectors and despatchers, etc., employed by *Hull City Transport Ltd., Hull, P.Q.*

10. *International Association of Machinists* on behalf of personnel employed in maintaining and servicing aircraft at the *Ottawa Airport* by *Canadian Air Express Limited, Montreal*.

11. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on the *Maxwell Park* operated by *Familoil Steamship Co., Ltd., Montreal*.

12. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on the *Rexton Kent* operated by *Kent Lines Limited, Saint John, N.B.*

13. *International Brotherhood of Electrical Workers, Local Union B 1405*, on behalf of radio broadcasting personnel, i.e., radio engineers, announcers, operators, traffic clerks, continuity writers, advertising salesmen and stenographers, not including the station manager, employed by *Artic Radio Corporation (Station CFAR), Flin Flon, Man.*

14. *Canadian Union of Boilermakers & Iron Shipbuilders, Local No. 3*, on behalf of unlicensed personnel employed on the tugs ss. *Busy Bee*, ss. *Chateau* and ss. *Manoir*, operated by *Davie Shipbuilding & Repairing Company Ltd., Lauzon, P.Q.*

15. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on the ss. *Jean Brillant*, ss. *Matane* and ss. *Rimouski* operated by *Lower St. Lawrence Transport Co., Ltd., Rimouski, P.Q.*

16. *Canadian Lake Seamen's Union* on behalf of tug boat personnel employed by *Sincennes McNaughton Lines Ltd., Montreal*.

17. *Canadian Brotherhood of Railway Employees & Other Transport Workers, Division 199*, on behalf of personnel in the Audit Office, *Canadian National Telegraph Audit Department, 347 Bay Street, Toronto*.

18. *National Association of Marine Engineers of Canada, Inc.*, on behalf of engineering officers employed on vessels plying between Port Dalhousie and Toronto, operated by the *Niagara, St. Catharines & Toronto Railway Company, Canadian National Steamers*.

Applications for Leave to Prosecute

1. *Canadian Brotherhood of Railway Employees & Other Transport Workers*, applicant, against *Hull City Transport Limited, Hull, P.Q.* The application was withdrawn by the union before receiving the consideration of the Board.

Conciliation Proceedings under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlement of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National) and, until May 15, 1947, such disputes in certain provinces were also referred to the Minister by the Provincial Boards in their respective jurisdictions. The Minister then appoints a Conciliation Officer to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Conciliation Board, a Board is then established by the Minister. The duty

of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

I Assignments of Conciliation Officer

During June, 1947, Conciliation Officers were assigned to confer with the parties in an attempt to effect an agreement in the following cases:—

Alberta Wheat Pool, Vancouver, B.C., and Local 501, Retail, Wholesale & Department Store Union (CIO-CCL). G. R. Currie, Conciliation Officer.

Railway Express Agency, Inc., and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). R. Trepanier, Conciliation Officer.

United Grain Growers' Terminals Ltd., Vancouver, B.C., and Local 501, Retail, Wholesale & Department Store Union (CIO-CCL). G. R. Currie, Conciliation Officer.

II Agreements Facilitated by Conciliation Officers or Applications Withdrawn

In the following cases, reports were received during June, 1947, from Conciliation Officers indicating the successful completion of negotiations with the signing of an agreement or the withdrawal of the application for intervention:—

City Laundry Ltd., Saint John, N.B., and Saint John Dry Cleaning & Laundry Workers' Union (CCL). H. R. Pettigrove, Conciliation Officer.

Crescent Creamery Ltd., City Dairy Ltd., Modern Dairies Ltd., St. Boniface Creamery Ltd., and Central Dairies Ltd., Winnipeg, Man., and Local 119, International Brotherhood of Teamsters, Chauffeurs, Warehousemen & Helpers of America (AFL-TLC). R. H. Hooper, Conciliation Officer.

Dominion Wheel & Foundries Ltd., St. Boniface, Man., and Local 174, International Moulders' & Foundry Workers' Union of North America (AFL-TLC). R. H. Hooper, Conciliation Officer.

Giant Yellowknife Gold Mines Ltd., Yellowknife, N.W.T., and Yellowknife District Miners' Union (Local 802, International Union of Mine, Mill & Smelter Workers) (CIO-CCL). G. R. Currie, Conciliation Officer.

Universal Fruit Co., Winnipeg, Man., and Truck Drivers' Unit, One Big Union. H. S. Johnstone, Conciliation Officer.

III Boards Established

During the month, Conciliation Boards were established to deal with disputes between the following parties:—

Canadian National Railways and Canadian Pacific Railway Company, their subsidiaries and jointly-owned undertakings, and Algoma Central and Hudson Bay Railway Co., Ontario Northland Railway, Toronto, Hamilton & Buffalo Railway Co., Pacific Great Eastern Railway Co., Essex Terminal Railway Co. and Sydney & Louisburg Railway Co., and the Brotherhood of Railroad Trainmen. M. M. Maclean, Conciliation Officer.

Canadian National Railways (Freight Handlers on Montreal Wharf) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). J. S. McCullagh, Conciliation Officer.

Canadian Pacific Railway Co. (Freight Handlers on Montreal Wharf) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). J. S. McCullagh, Conciliation Officer.

Canadian Pacific Railway Co. (Communications Dept.) and Commercial Telegraphers' Union, Canadian Pacific System, Division No. 1 (AFL-TLC). J. S. McCullagh, Conciliation Officer.

Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Canadian National Railways (B.C. Coast & Lakes Barge & Ferry Service), Canadian National Railways (B.C. Coast Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and National Association of Marine Engineers of Canada, Inc. (TLC). G. R. Currie, Conciliation Officer.

IIIA Recommendations of Conciliation Officers Referred to Provincial Ministers of Labour

In the following cases, Conciliation Officers appointed by the Minister of Labour before May 15, 1947, to deal with disputes now falling within Provincial jurisdiction reported during the month of June that they had been unable to effect settlements of the disputes and recommended the establishment of Conciliation Boards, and their recommendations were referred to the appropriate provincial Ministers of Labour:—

B. L. M. Line, Bridgewater, N.S., and Lodge 355, Brotherhood of Railroad Trainmen. H. R. Pettigrove, Conciliation Officer.

Rumford Laundry Ltd., Brandon, Man., and Local 1, Brandon Laundry Workers' Union (CCL). R. H. Hooper, Conciliation Officer.

IV Boards Fully Constituted

Canada Veneers Ltd. The Conciliation Board established to deal with a dispute between Canada Veneers Ltd., Saint John, N.B. and the Industrial Union of Veneer Workers (CCL) was fully constituted on June 11, 1947, with the appointment of His Honour Judge H. O. McInerney, Saint John, as Chairman of the Board, on the joint recommendation of the other two members of the Board, T. L. McGloan, Saint John, and J. K. Bell, Halifax, who had been appointed on the recommendation of the employer and employees respectively.

V Board Reports Received

During the month, Board reports were received in the following cases:—

Canadian National Railways and Canadian Pacific Railway Co., their jointly and separ-

ately owned subsidiaries and ancillaries; and Pacific Great Eastern Railway; Algoma Central & Hudson Bay Railway; Toronto, Hamilton & Buffalo Railway; Ontario Northland Railway; Sydney & Louisburg Railway; and Essex Terminal Railway; and their employees, members of the Brotherhood of Locomotive Engineers; Brotherhood of Locomotive Firemen & Enginemen; Order of Railway Conductors; Brotherhood of Maintenance of Way Employees; Brotherhood of Railway Signalmen of America; Canadian Pacific Railway System Federation No. 125 (Shop Crafts); Canadian National Railway System Federation No. 11; Division No. 4, Railway Employees' Department (AFL); Canadian Brotherhood of Railway Employees & Other Transport Workers; Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees; Hotel & Restaurant Employees' International Alliance & Bartenders' International League of America; International Brotherhood of Firemen & Oilers, Steam Plant Employees, Roundhouse & Railway Shop Labourers; Brotherhood of Express Employees; International Brotherhood of Electrical Workers; and International Brotherhood of Blacksmiths, Drop Forgers & Helpers.

McIntyre & Taylor, Toronto, Ont., and International Moulders & Foundry Workers' Union of North America (AFL-TLC).

Ray's Superior Stores Ltd., and Ray's Ltd., Vancouver, B.C., and Retail Grocery & Food Clerks' Union (Local 1518, Retail Clerks' International Protective Association) (AFL-TLC).

Reliance Foundry Co. Ltd., Vancouver, B.C., and Vancouver District Metal & Chemical Workers' Union (Local 289, International Union of Mine, Mill & Smelter Workers) (CIO-CCL).

Systems Equipment Ltd., Winnipeg, Man., and Local 191, International Typographical Union (AFL-TLC); Local 160, International Brotherhood of Bookbinders (AFL-TLC); and Local 87, International Printing Pressmen & Assistants' Union (AFL-TLC).

Union Gas Co. of Canada Ltd., Chatham, Ont., and Local 1, 2 and 3, National Union of Natural Gas Workers (CCL).

Vancouver Barge Transportation Co., Vancouver, B.C., and Local 501, International Longshoremen's & Warehousemen's Union (CIO-CCL).

Report of Conciliation Board in Dispute Between Canadian National Railways and Canadian Pacific Railway Company, their Jointly and Separately-owned Subsidiaries and Ancillaries, and Pacific Great Eastern Railway; Algoma Central & Hudson Bay Railway; Toronto, Hamilton and Buffalo Railway; Ontario Northland Railway; Sydney & Louisburg Railway; and Essex Terminal Railway; and Brotherhood of Locomotive Engineers; Brotherhood of Locomotive Firemen & Enginemen; Order of Railway Conductors; Brotherhood of Maintenance of Way Employees; Brotherhood of Railway Signalmen of America; Canadian Pacific Railway System Federation No. 125 (Shop Crafts); Canadian National Railway System Federation No. 11; Division No. 4, Railway Employees' Department (AFL); Canadian Brotherhood of Railway Employees & Other Transport Workers; Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees; Hotel & Restaurant Employees' International Alliance & Bartenders' International League of America; International Brotherhood of Firemen & Oilers; Steam Plant Employees, Roundhouse & Railway Shop Labourers; Brotherhood of Express Employees; International Brotherhood of Electrical Workers; and International Brotherhood of Blacksmiths, Drop Forgers & Helpers.

On June 27, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Dr. Alexander Brady, Toronto, Chairman, appointed by the Minister on the recommendation of the other two members of the Board, J. F. Chisholm, K.C., Montreal, and M. W. Wright, Ottawa, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ont.

Sir:

A preliminary meeting of the Board was held at Montreal on May 30, 1947, with representatives of the parties, when there was discussed in general terms the dispute and the procedure for the presentation of evidence.

There were present at this meeting Messrs. H. D. Brydone-Jack and R. C. Johnston, representing the Companies, and Messrs. F. H. Hall, A. E. Payne and H. Smith, representing the Unions.

On June 10th, a complete hearing was held in Montreal and the two briefs of the parties were there read and discussed. The Union brief, presented by Mr. F. H. Hall, was submitted on behalf of the employees, represented by:

- Brotherhood of Locomotive Engineers
- Brotherhood of Locomotive Firemen and Enginemen
- Order of Railway Conductors
- Brotherhood of Maintenance of Way Employees
- Brotherhood of Railroad Signalmen of America
- Canadian Pacific Railway System Federation No. 125 (Shop Crafts)
- Canadian National Railway System Federation No. 11 (Shop Crafts)
- Division No. 4, Railway Employees' Department, A.F. of L.
- Canadian Brotherhood of Railway Employees and Other Transport Workers.
- Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees
- Hotel and Restaurant Employees International Alliance and Bartenders International League of America
- International Brotherhood Firemen and Oilers, Steam Plant Employees, Round House & Railway Shop Labourers
- Brotherhood of Express Employees
- International Brotherhood of Electrical Workers
- International Brotherhood of Blacksmiths, Drop Forgers and Helpers.

The brief on behalf of the Railway was presented by Mr. Brydone-Jack and expressed the views of the Canadian National Railways, the Canadian Pacific Railway Company, the jointly and separately owned subsidiaries and ancillaries of these Companies and, in addition, the following other Railways:

- Pacific Great Eastern Railway,
- Algoma Central & Hudson Bay Railway,
- Toronto, Hamilton & Buffalo Railway,
- Ontario Northland Railway,
- Sydney & Louisburg Railway,
- Essex Terminal Railway.

The workers involved in the dispute comprise about 65 per cent of the total number of the employees of the Railways in question. The dispute arose from the request of the Unions that:

All employees shall be granted fourteen days' vacation with pay each year, exclusive

of legal holidays, to become effective during the year 1947.

At the present time, a wide variety of practices prevails for vacations with pay, with the range of regularly employed workers extending between six and twelve days (and in a few cases exceeding twelve days). The general practice is that hourly-paid employees are given about six days and the monthly-paid employees twelve or even more. In the case of seasonal workers, there are special provisions respecting holidays that need not here be described. The request by the Unions is designed to achieve a more uniform and higher standard in the provision for vacations throughout the field of railway employment.

The Board is of the opinion that the request should be judged by reference to what is coming to be prevalent industrial practice and what is coming to be regarded as desirable social policy. The railways are great industries and vital factors in the economy of Canada, and hence must inevitably reflect the tendencies prevailing in that economy. The issue of capacity to pay arises and is, much emphasized in the brief of the Railways submitted before the Board. The Board is strongly conscious of the great difficulties of railway management now and indeed at all times. Rigid overhead costs have to be met, whereas traffic in the peculiar continental economy of Canada quickly and steeply fluctuates. The rapid rise in costs incidental to the war and post-war periods bears heavily upon railway management. The Railways properly emphasize in their brief that net earnings for the first four months of 1947 are some 64 per cent less than for the same period of 1946.

Nevertheless, the Board is convinced that these financial difficulties of railway management which periodically occur should not be permitted to obscure the force in the claims of the Unions for annual paid vacations that will compare favourably with those prevalent in other great industries. It believes that the public of Canada will expect the Railways to recognize such vacations. It therefore recommends that employees with one year's service should be entitled to six days' vacation with pay, that those of three years' service should be entitled to nine days, and those of five years' to twelve days. Since practices as to what constitutes a year's service now vary greatly according to the trades, the Board is not attempting to recommend the clause or clauses for incorporation into the agreements. The Board is concerned with laying down general terms and believes that the details to be embraced in the clauses should be formulated by the Companies and the Unions in negotiations.

It should be understood that where more favourable conditions prevail with respect to vacations with pay, they should not be adversely affected by this Board's recommendations.

Seasonal employees on waterfront operations should be entitled, like checkers at present, to holidays according to the time worked in each season. The Board would emphasize the need of as much uniformity as possible in the amount of paid vacations given to such workers. It thinks that similar provisions should apply to freight handlers on waterfront operations.

The lucid and excellently prepared brief of the Railways indicates, *prima facie* at least, incapacity on their part to absorb the increased cost involved in accepting this Board's recommendation. The Board is not, however, unmindful of the fact that an application is presently pending before the Board of Transport Commissioners for increased freight rates and suggests that the recommendations herein

contained be brought to the attention of that Board. But in any case the Board would emphasize that an attempt to establish the vacations recommended in this report should be made only through the careful and joint efforts of Unions and Companies to reduce the burden of such holidays on the operating expenses of the Railways. It is equally in the interests of the Unions and Companies that these costs should be kept to the minimum.

If, in the process of their negotiations, the parties should desire the assistance of this Board, it will be prepared to reconvene and to place its services at their disposal.

All of which is respectfully submitted.

(Sgd.) ALEXANDER BRADY,
Chairman.

(Sgd.) M. W. WRIGHT,
Member of Board.

(Sgd.) J. F. CHISHOLM,
Member of Board.

Report of Conciliation Board in Dispute Between McIntyre & Taylor Ltd., Toronto, Ont., and International Molders & Foundry Workers' Union of North America (AFL-TLC)

On June 24, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge Samuel Factor, Toronto, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, W. E. Corman, Toronto, and Fred Molineux, Hamilton, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL, M.P.,
Minister of Labour,
Ottawa, Ont.

SIR:

The Board of Conciliation appointed by you has investigated the matters in dispute, and after several meetings has succeeded in effecting an agreement between the parties on the matters on which they could not agree, and attached hereto, as Schedule "A", is the final proposal of the Company, which has been accepted by the Bargaining Committee, on the various matters in dispute. This will be submitted to the men for approval, and will be embodied in a formal agreement later on.

The Board desires to commend the spirit of co-operation shown by the representatives of the Company, and its Counsel, E. Macaulay Dillon, Esq., K.C., as well as by the repre-

sentatives of the Union, in effecting this agreement.

Dated at Toronto this 19th day of June, 1947.

(Sgd.) S. FACTOR,
Chairman.

(Sgd.) W. E. CORMAN,
Member.

(Sgd.) FRED MOLINEUX,
Member.

Schedule "A"

PROPOSAL OF THE COMPANY

Provided the Union will accept the principle that during the life of the agreement any wage increases and other concessions ultimately agreed upon shall be effective only if the tonnage of the foundry increases by a total of one ton per working day for every working day in the calendar month above 11,000 pounds per day, the Company will make the following concessions:—

WAGES

The wage scale shall be as set out in this paragraph if the above production is achieved and the employee shall be paid with the first pay in the succeeding calendar month the

difference between the rates set out hereunder and the present wage rates:

Proposed Scale of Rates Payable if the
Production Goal is Achieved in any
Calendar Month

	Per Hour
Floor moulders	\$1.05
Bench moulders	1.00
Coremakers95
Cupola tender85
Cupola helper85
Grinders80
Labourers75
Plater95
Polisher80
Welder85
Tinshop help85
Truck driver75

It will be observed that increases on this basis are offered to all employees. As the tinshop help are not concerned in the foundry production, their wage increase is absolute and not conditional, if the whole proposal is accepted.

The shake-out men are not in this list. The Company has since the last meeting made an arrangement with them to pay them a rate of \$33 per night whether two or three show up, as they have agreed to complete the work. If they only work two hours, they get \$33. The Company understands they are satisfied, although the Company is not sure the Union has been informed.

UNION SECURITY

The Company will not agree to a union shop, but if this offer is accepted, and not otherwise, will give the union a voluntary revocable check-off.

HOLIDAYS

The Company will pay for Christmas and New Year's Holidays not worked, but if worked will pay double time. If work is required on Good Friday, Victoria Day, Dominion Day, Civic Holiday, Labour Day or Thanksgiving Day, the Company will pay time and one-half.

STANDARD WORK WEEK

The standard work week will be five days of 9 hours each except for labourers and cupola men and the standard work week for the two classifications will be 48 hours including 3 hours on Saturday morning. These classifications must work for three hours on

Saturday morning if required and are not to refuse to come in on Saturday morning unless they are given 5 hours and paid time and one-half for the extra two hours which they have consistently done in the past.

OVERTIME

All overtime shall be paid at time and one-half on a weekly basis as above.

VACATIONS WITH PAY

For vacations in the first week of July, 1947, the Company will comply with the existing legislation and only one week's holiday with pay will be given to those entitled thereto, but, provided the production goal is achieved over the period from July 1, 1947 to June 30, 1948, employees with five years or more service will be given one week's holiday with two weeks' pay.

SENIORITY

Clause 5, subsection (f)* in the agreement submitted by the Union shall read as follows:—

5 (f) That in case of a lay-off the Company shall be at liberty to lay off any employee who in the exclusive judgment of the Company is less efficient than employees retained and the seniority provisions and the grievance procedure shall not apply.

This clause is for the protection of the men in view of the proposed conditional increases on production. Clause 5 (g) will have to be deleted as it is not applicable, for there is no union shop.

BONUS AND RETROACTIVE DATE

As the production has never since February 14, 1947, come up to the minimum hereinbefore set forth upon which increases are to be based, it is obvious that the principle of retroactive pay cannot be applied. However, the Company is willing to pay all the people in the moulding shop and tinshop (excluding shake-out men) a bonus forthwith after the execution of the agreement, of 5 cents per hour for every hour worked by each employee (exclusive of overtime) from February 14, 1947, to the 18th of June, 1947. This is a bonus without relation to production and for the purpose of enabling the Union, if it cares to, to sell this program to its members. This bonus of course is not to apply to any employee who has now left the Company.

Report of Conciliation Board in Dispute Between Ray's Superior Stores Ltd., and Ray's Ltd., Vancouver, B.C., and Retail Grocery & Food Clerks' Union (Local 1518, Retail Clerks' International Protective Association) (AFL-TLC)

On June 14, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Clarence Darling, K.C., Vancouver, B.C., Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Ian Cameron and R. K. Gervin, both of Vancouver, appointed on the nomination of the employer and employees respectfully.

Report of Board

To:
The Hon. the Minister of Labour.

The first hearing of the Board was held on April 25 at which the three members of the Board were present and also representatives of the parties concerned, namely:—

Mr. Walter S. Owen, K.C., and Mr. G. F. Cameron, for the Employers, and Mr. G. Johnston and Mr. J. O. Stinson, for the Retail Grocery and Food Clerks' Union.

The Union submitted a written brief and a number of documents which were referred to in the brief. Objection was taken by Counsel to both the brief and to the documents which were tendered in support; until he should have an opportunity of examining the brief and documents: reserving the right to further object after examination.

After some discussion it was arranged that copies of the brief and documents would be delivered to Mr. Owen for perusal and consideration and the meeting was adjourned to the following Wednesday. In the meantime the parties agreed that the members of the Board be permitted to peruse the documents without prejudice to any objections which might later be made as to their being receivable as exhibits.

The members of the Board met on April 29 and individually perused the aforesaid documents and discussed their contents, and their relevancy and admissibility.

The hearing was resumed on Thursday, May 1, when the Employers' counsel objected to the history, over a number of years, of negotiations, rates of pay, and various agreements, on the ground that there had been a change of ownership of the undertaking and that all that concerned the Board was the present demand of the Union for an increase of the present wage rates as established by the last agreement, Exhibit 8, dated the 8th day of November, 1945, made between the

Retail Clerks Union, Local 279, R.C.I.P.A., on behalf of the employees, and Ray's Superior Stores Limited.

The rates of wages according to said agreement and which are the rates in force up to the present time are as follows:—

Managers: \$35.95 per week, plus 15 per cent of net profit (bonus to be paid quarterly).

Grocery Clerks (Male): First six months experience, \$24.95; thereafter, \$28.95.

Grocery Clerks (Female): Under 6 months' experience, \$18; 6 to 12 months' experience, \$19; 12 months to 18 months' experience, \$20; 18 months to 24 months' experience, \$21; 24 months to 30 months' experience, \$22; 30 months to 36 months' experience, \$23; thereafter, \$25.

By letter dated January 4 last the Union requested the employer to adjust the wage rates of employees as follows:—

Female Clerks' Scale

That a three month probationary period be established for inexperienced employees at a rate of \$18 per week after which period inexperienced employees will be placed on regular wage scale. Regular wage scale will be the female scale now contained in articles of agreement between Ray's Superior Stores and the Retail Clerks' Union, Local 279 plus 10 cents per hour increase.

Male Clerk Wage Scale

First six months' experience, \$24.95 per week; Second six months' experience, \$28.95 per week; Third six months' experience, \$32.95 per week; thereafter, \$35.95 per week.

Grocery Managers

Ten cents per hour increase over present basic salary of \$35.95 plus present bonus of 15 per cent of net profit.

The offer, however, was on the footing of immediate acceptance, otherwise the Union would revert to a previous demand of a general increase of 15 cents an hour and this was what the Union contended for in its opening brief.

The Union submitted the following contentions:—

1. That the cost-of-living index has continued to rise and is still rising; and that so far as these employees are concerned, the rates of pay heretofore paid them have in

no way been a contributing factor; that they are as much the victims of the rising cost of living as anyone.

2. That the rates of wages paid to these employees always have been low and are particularly so at the present time having regard to the rising cost-of-living index (*inter alia*).

3. That the volume of retail sales of groceries has greatly increased generally, including the sales by these employers and at the same time controls of prices of a great many articles of food sold by grocers have been lifted, and in any event there is and always has been a sufficient "Mark up" allowance between controlled wholesale and retail prices to permit a reasonable profit to the retailer.

4. That while they are willing to have some regard to the profits and/or the losses of the employer in his business, adjustments and economies should not, in principle, be made at the expense of the wage earner, i.e., either by reduction in wages or withholding increases that are necessary to give him a decent standard of living and in accordance with what is generally paid by good employers.

A written statement was submitted showing a comparison of the rates of wages paid by Safeway Stores over a period of years with that paid by the present employers, which generally showed much higher scales of wages than Ray's Superior Stores, but the Union representatives later admitted that they were aware of the differential between the types of operation of these two establishments. They later stated that these figures were submitted as these two concerns were the only two grocery firms with whom the Union had wage contracts, and to show that while periodical adjustments had taken place in the Safeway scale, no overall adjustments had taken place in Ray's Superior rates. Other "food chain" concerns were referred to at the hearings, namely, B. & K. Economy and Wilbee's; but the Union representatives submitted that it would not be fair to compare union rates with those of unorganized firms. They believed that B. & K. rates were somewhat higher than, and that Wilbee's rates were comparable with, those of Ray's Superior Stores.

Rates paid to grocery clerks in David Spencer's and Woodwards Departmental Stores were discussed but no details or direct evidence were given. Mr. Johnston stated he knew that Woodwards did not pay any married man in their store less than \$35 for a 40-hour week and that he personally knew a male clerk with B. & K. Stores who receives

\$37.50 per week, but this was after twelve years' employment.

On the other hand, the employers made the statement (which was not disputed) that their profit for the year ending April 30/47 was \$16,095; that an increase as asked for by the Union would cost the employer \$21,964 on its present payroll, which their counsel submits shows the impossibility of granting the request.

The employers further submitted that the volume of sales was not a proper criterion upon which to base any opinion as to their Company's financial position, and while sales have increased the fact remained that the volume of turnover has not produced the profits which the Union suggests it has, or should have, made.

The Employers during the hearing objected to the *Managers* being included in any agreement and refused to recognize the Union as representing them in the negotiations, notwithstanding the purported certification by the Minister of Labour (as representing the Wartime Labour Relations Board) on the ground that managers are not "employees" as defined by Section 2 (f) of the Wartime Labour Relations Regulations (P.C. 1003) in that they are "persons employed in a confidential capacity" and there is no authority in the Board nor in the Minister to certify bargaining representatives for them.

On the other hand the Union refused to conclude any agreement without including the managers as "employees": their contention being that while they are called "managers" they are not managers in the sense of having real management. They have no power to employ or discharge (except possibly casual labour on special occasions) and there is nothing of a "confidential" nature respecting their employment. Furthermore, that the Minister's decision is binding and there has been no appeal therefrom.

The members of the Board take the view that this question was not in issue in the dispute, and that in any event they feel they cannot sit on appeal respecting any decision or action of the Minister—particularly when (through inadvertence or otherwise) the employers failed to appeal to the Wartime Labour Relations Board as they might have done.

The employers finally made an offer of 5 cents per hour increase "across the board"—managers not to be included in any formal agreement. Assurance was given to the Board, however, that if their offer respecting the other employees were accepted, they would

also give their managers a 5-cent per hour increase—these increases to become effective as from the present time.

Counsel for the employers pointed out that every five cents per hour increase would cost \$7,322 per annum. He further contended that there had been no price relief so far as these employers were concerned; that withdrawal of controls had only applied to luxury lines which people were not buying, e.g. canned lobster, etc. True, there had been an increase in the price of butter, for instance, but the spread was the same, there was no increase in the profit; the increase passed all the way down the line.

However, that may be, and recognizing that the cost of living had increased, and wishing to do all they possibly could, they were prepared to make the above offer of five cents per hour, across the board—excluding managers from any formal agreement.

The question of expenses of the business was discussed. The representatives of the employers had with them a "break-down" statement of their operating expenses, but did not wish to file it as an exhibit as they did not feel called upon to make public such information, which was of a private nature; but they were willing to have their figures audited and the results certified by a chartered accountant. This would have meant further delay and the Union representatives intimated they did not wish to question the bona fides of the figures. The list of the expense accounts was read over and some of the figures discussed, including "depreciation", etc. Employers' representatives also gave a figure of approximately \$250,000 as the actual capital investment in the twenty-nine "Superior" Stores (Grocery Departments).

At the final hearing which took place on May 28, the Union made a final offer to recommend acceptance of the following rates and terms:—

Female Clerks

An increase of 5 cents per hour over present rates.

Male Clerks

The rates as set out in their letter of January 4, 1947, as set out above.

Managers

That managers be included in a formal agreement along with other employees and they be given an increase of ten cents per hour (plus the present bonus of 15 per cent of net profits).

All of the above rates to apply as from the first of January of the present year.

RECOMMENDATION

After giving due consideration to the foregoing submissions of the respective parties, this Board recommends that the parties mutually conclude an agreement embodying the following terms:—

1. That the wage rates of the female clerks be increased by five cents per hour.
2. That the scale of wage rates for male clerks be as follows:

First six months' experience, \$24.95 per week; Second six months' experience, \$28.95 per week; Third six months' experience, \$30.95 per week; Fourth six months' experience, \$31.95 per week; Over 2 years' experience, \$32.95 per week; Over 3 years' experience, \$33.95 per week.

In the above scale there is no change in the figures for the first and second six months of experience from the present scale nor from the new rates which the Union is asking for.

An increase of five cents per hour over the present rate of \$28.95, which is payable generally to all employees after six months' experience (no matter how long employed), would mean an increase to \$31.15, where it would stop. The Board feels that it would be more equitable all around if the scale were graduated so as to give somewhat less than \$31.15 to those who have been employed for less than two years and give somewhat more to those who have been employed for a period longer than two years. The Board assumes that those remaining in the employment for over two years should have not only become more efficient through experience; but the fact of their retention in employment by the employer for that length of time is at least some evidence of their employer's regard towards them for their qualities as diligent, efficient and honest employees. The Board has considered also the probability that the average beginner is a young unmarried man who in the course of the next couple of years or so would likely have the responsibilities attached to married life. Nor has the Board overlooked either the rising cost of living or the limited profit of the employers' operations out of which increases can be paid.

Re Managers

(a) As to their inclusion in a formal agreement: the Board for the above reasons recommends that they be so included; but so that such inclusion will not operate as any admission on the part of the employers that may prejudice them when the question of certification of bargaining representatives again comes up before the Minister, your

Board recommends the inclusion of a clause in the agreement in the following words, or to the following effect, viz:—

Provided always that nothing in this Agreement contained shall operate as any admission on the part of the Employers that the Union are the legal bargaining representatives of the Employers' managers and that the inclusion of managers in the scale of rates of pay in this Agreement shall be without prejudice to the objection of the Employers that their managers are not "employees" within the meaning of the War-time Labour Relations Regulations, P.C. 1003, or of the Provisions of the British Columbia I.C. & A. Act, 1947.

(b) As to rates of pay of managers: The Board has given consideration to the fact that in addition to a basic wage of \$35.95 the managers are also entitled to a bonus of fifteen per cent of the net profit. They also appreciate the possibility that the bonus may amount to very little with respect to managers of some of the stores—(more with regard to others); but the opportunity is there and in this respect the interests of both employers and managers are mutual, except

that the Employer has a greater control. The Board also appreciates the contention on the part of the Union that the "managers" are not managers in the ordinary sense, but are mere "employees" within the meaning of the Regulations. If this be so the rate of \$35.95 presently being paid is not so much out of line—particularly if to this is added a bonus of fifteen per cent of the net profit of their respective stores. The Board, therefore, considers that an increase of the basic wage of managers to \$39 per week (plus the bonus) is reasonable under all the circumstances and should be accepted by the managers.

As to the date from which these rates should become effective, the Board recommends that the effective date be as from April 1 of the present year.

Respectfully submitted,

(Sgd.) CLARENCE DARLING,
Chairman.

(Sgd.) IAN CAMERON,
Member.

(Sgd.) R. K. GERVIN,
Member.

Report of Conciliation Board in Dispute Between Reliance Foundry Co. Ltd., Vancouver, B.C., and Vancouver District Metal & Chemical Workers' Union (Local 289, International Union of Mine, Mill & Smelter Workers) (CIO-CCL).

On June 26, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Colonel J. F. Keen, appointed by the Minister in the absence of a joint recommendation from the other two members of the Board, O. R. Olson and W. L. White, who were appointed on the nomination of the employer and employees respectfully. All three reside in Vancouver.

Report of Board

Hon. Minister of Labour,
Ottawa, Canada.

DEAR SIR:

The Conciliation Board appointed by you under P.C. 1003 in the above matter present this unanimous report, the negotiations having now been brought to a conclusion.

While at early meetings the matters in dispute proved highly contentious, especially in regard to the segregation in the wage schedule (which was desired by the employer) of unskilled labour (beginners) in that part

of their foundry manufacturing malleable iron. The Board held a meeting at the foundry which helped considerably in the understanding of the different processes involved and contributed to better progress in the conciliation proceedings, with concessions made by both sides.

Mutual understanding has now been reached and is embodied in an agreement duly signed by both parties.

The Board regrets the somewhat protracted sessions which were necessary, but some of the points simply could not be hurried. Trusting that you will regard this as a satisfactory conclusion of the Board's efforts.

Respectfully submitted,

(Sgd.) J. F. KEEN,
Chairman.

(Sgd.) W. L. WHITE,
Member.

(Sgd.) OSCAR R. OLSON,
Member.

**Report of Conciliation Board in Dispute Between Systems Equipment Ltd.,
Winnipeg, Man., and Local 191, Winnipeg Typographical Union;
Local 160, International Brotherhood of Bookbinders; and
Local 87, Winnipeg Printing Pressmen &
Assistants' Union**

On June 2, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Hon. Mr. Justice A. K. Dysart, Winnipeg, Chairman, appointed by the Minister of Labour on the recommendation of the other two members of the Board, T. W. Laidlaw, K.C., and A. Murphy, both of Winnipeg, appointed on the nomination of the employer and employees respectively.

Report of Board

Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

DEAR SIR:

We, the undersigned, being the members of the Board of Conciliation appointed by you on the 25th day of March, 1947, "to endeavour to effect an agreement between the above-mentioned employer and employees on the matters on which they had not agreed", having now completed the task assigned us, beg leave to submit herewith our Report thereon.

The result of our endeavours is that we have brought the parties into an arrangement which we believe is a solution of the problem submitted. This arrangement, although not all that we desired, is the best that we can secure from the parties, and we believe it will be effective.

In order to understand the scope and effect of the arrangement, it is necessary to set forth the opposing claims and contentions.

The employees' claim is for a 40-hour week, at \$1 per hour basic wage for journeymen, to become effective immediately. In support of this claim, the spokesmen for the three Unions involved insisted that the 40-hour week is an established fact in their respective trades; that it has been adopted by most of the printing-houses in Greater Winnipeg and elsewhere. They adhered to this claim as to a principle. The wage rate of \$1 they claimed is inseparably attached to the 40-hour week. They would not give any off-setting value to the pensions scheme which the employer has had in force for several years, for the reason, they say, that while the pension is an important factor in social security, it does not help to support families in the meantime. Besides, they said, the pensions scheme was set up and operated

largely for the office staff and other employees of the employer who are not members of their Unions. They do not deny that the contributions of the employer to the pensions fund may equal, or even exceed, the extra cost to the employer that would result from shortening the working week and increasing the hourly wage rate. They said that is not the issue here. They refuse to accept anything less than their full demand, for the additional reason that to do so would embarrass them or place an obstacle in their way when dealing with other employers for a contemplated further increase in wage rate. In all this they give little, if any, weight to the claims of Mr. Swan—spokesman for the employer—that his business has special features which materially distinguish it from all other printing establishments in this area, and maintain that, at any rate, they would not recognize the existence of any such special features.

For the employer, Mr. Swan maintained that he could not immediately meet the employees' present demands. He declared that his business is a specialized one which requires specially trained workmen—particularly in the typographical branch thereof; that he has not, and cannot get, a sufficient number of specially trained men to enable him to turn out the work which he is at present able to do on the 43-hour week. He pointed out that he would be quite willing to meet the employees' demands if he could get and immediately install new improved machinery which would facilitate the work, but that the machinery, although ordered many months ago, is not yet ready for delivery and will not be so for a considerable time to come.

Mr. Swan referred to the pensions scheme as something of real value to the employees—more than equivalent to the increased benefits they would derive under the present demands of the Unions; that his contributions to the pensions fund exceed those that would be required by adoption of the present demands. He said that if he is forced now to meet those demands, he would have to drop the pensions scheme. This he is willing to do if his employees are satisfied to discontinue it. He preferred, however, to meet the demands gradually, along the lines laid down by the Regional War Labour Board, under which he has ever since been operating. This plan he recognizes was declared by the

National War Labour Board to be beyond the powers of the Regional Board, yet he maintained that the plan was fair and just to all concerned. The plan laid down by the Regional War Labour Board was

- a 44-hour week at 97 cents per hour, from June 3, 1946, to February 28, 1947;
- a 43-hour week at 98 cents per hour, from March 1, 1947, to December 11, 1947;
- a 42-hour week at 99 cents per hour, from December 11, 1947, to June 1, 1948;
- a 40-hour week at \$1 per hour, beginning June 1, 1948.

The Board is satisfied that there are special features of this employer's business which distinguish it from other businesses of like nature. They recognize also the position of the Unions and their desire for a united front in meeting other employers.

Considering all these factors, the Board contemplated submitting to all employees—whether members of the Unions or not—a questionnaire to determine how many of the employees are Union members and how many would be willing to drop the pensions scheme in order to get the betterment from hours and wage rates. However, before any such questionnaire was submitted, a suggestion emanated from the members of the Board that a compromise might be effected. The compromise is that the employer continue the present 43-hour week at 98 cents per hour until the end of 1947; that beginning with January 1, 1948, he establish a 40-hour week at \$1 per hour; and that the pensions scheme be continued. This compromise was submitted to the different parties at separate meetings, and, finally, at a joint meeting of all of them. At this meeting the question

was specifically put to them in the following form:—

(1) That the Employer

- (b) continue the present level of a 43-hour week at 98 cents per hour basic pay until the end of 1947, and will, beginning January 1, 1948, change over to a 40-hour week at \$1 per hour; and
- (b) will continue unchanged its present pensions scheme.

To that submission, Mr. Swan, for the employer, stated positively that, although he disliked the proposed compromise, he would accept it and live up to it; and the spokesmen for the three Unions stated that, while disliking the proposed compromise and declining to accept it formally, they would acquiesce in it as being the unanimous recommendation of the Board, and would do nothing to interfere with its full and free operation.

We are satisfied that this compromise will be carried out as stated, and we therefore unanimously recommend it for the acceptance of each of the parties to this dispute.

The first meeting on this matter was held on May 3. Several meetings were held subsequently—some with one side and some with the other—until the final meeting just mentioned, held on May 19.

All of which is respectfully submitted.

Report of Conciliation Board in Dispute Between Union Gas Co. of Canada Ltd., Chatham, Ont., and Locals 1, 2 and 3, National Union of Natural Gas Workers (CCL)

On June 19, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Judge J. J. Coughlin, Windsor, Chairman, appointed by the Minister of Labour in the absence of a recommendation from the other two members of the Board, R. R. Evans, K.C., Hamilton, and J. D. McNish, K.C., Toronto, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable
The Minister of Labour,
Ottawa, Ont.

I

1. The Board of Conciliation established by you in the above matters, consisting of

His Honour Judge Coughlin as Chairman, R. R. Evans, K.C., Hamilton, as the Employers' nominee and Mr. J. D. McNish, K.C., as the Unions' nominee, convened at the call of the Chairman in Chatham on Monday May 19, 1947. The Employers were represented by Mr. J. A. McNevin, K.C., and Mr. Thomas Weir and the Union Locals were represented by Messrs. Robson, Rhodes and Lezert.

2. Locals Nos. 1 and 2 have not been certified but a collective bargaining agreement dated the 1st of March, 1946 is in existence between Local No. 1 and Windsor Gas Company Limited respecting the Windsor District, and a collective bargaining agreement dated the 1st of March, 1946 is in existence between Local No. 2 and Union

Gas Company of Canada Limited respecting the Sarnia District. Local No. 3 has been certified by the Ontario Labour Relations Board with respect to the City Gas Company of London respecting the London District.

3. These proceedings arise in respect of negotiations for renewal of the two above mentioned collective bargaining agreements and the negotiation of a collective bargaining agreement between Local No. 3 and the City Gas Company of London in respect of the London District.

4. For the purposes of convenience all three hearings were conducted as joint hearings and the following references apply generally to all three locals and both companies and the "Windsor", "Sarnia" and "London" Districts unless otherwise specified or indicated.

II

1. The matters dealt with in this report cover all the matters raised before the Board at the above mentioned hearings.

Sub-Foremen

2. Locals 1 and 2 requested that sub-foremen be included in the Windsor and Sarnia bargaining units. Under the Order of Certification respecting the London unit sub-foremen are not specifically excluded therefrom. The Board is of the opinion that sub-foremen should be included in the bargaining units for all three areas and recommends accordingly.

Arbitration

3. The two existing agreements provide that grievances may be taken to a Board of Arbitration consisting of one representative appointed by the Company in question, one representative appointed by the Local in question and the Senior County Court Judge of the County of Essex or one of the Junior Judges of that County in the case of the Windsor District and the Senior County Court Judge of the County of Lambton or one of the Junior Judges of that County, respectively to act as Chairman. The arbitration clause in each case then goes on to provide for an appeal from such Board to an Umpire whose decision shall be final.

4. The Board is of the opinion that the decision of the Board of arbitration should be final and that there should be no appeal therefrom and that the Chairman should be a Judge of the Supreme Court of Ontario or a County Court Judge appointed by the Minister of Labour for Ontario but excluding therefrom a Judge of the County Court of the County in which the District in question lies and recommends accordingly in respect of all three Districts. A draft of proposed

arbitration clause in accordance with the Board's recommendation is attached hereto as schedule 1 hereto.

Overtime—Sundays—Statutory Holidays

5. The Union asked for modification of the provisions of the present Windsor and Sarnia contracts relating to these matters. The Board finds that the present provisions and the present practice relating thereto are fair and reasonable and recommends that the same remain unchanged and be also made applicable to the London District. This is on the understanding that where an employee works on any of the six Statutory Holidays named in the Windsor agreement of March 1, 1946 or any of the two additional holidays agreed upon by the parties; namely, Empire Day and Civic Holiday; he shall be paid time and a half for the hours worked on that day and shall be entitled to another day off with pay at straight time rates.

III

WAGE INCREASES

Differentials

1. The Union contended that there should be no differential in wage rates between Windsor, Sarnia and London District. The Company contended that there should be a differential and that there always had been a differential between those three localities and Mr. Weir stated that the Company after a very thorough and elaborate investigation and study had concluded on the basis of all the facts available that a fair and proper differential between the three localities was as follows:

Sarnia — 3% below Windsor
London — 3% below Sarnia

Mr. Weir frankly stated that by reason of the many intervening factors it was difficult to establish a definite accurate yardstick. The Board is of the opinion that adopting the best evidence rule Mr. Weir's estimate should be accepted and recommends that a differential of 3% between Sarnia and Windsor and 6% between London and Windsor be accepted and established.

General Wage Increases

2. The Company presented and filed with the Board as Exhibit 3 very comprehensive and detailed figures, tabulations and charts respecting each of the three Districts in question including the Companies' detailed proposals covering a complete revision of classification and proposed new rates both hourly and weekly and including a proposed flat monthly cost of living bonus of \$5.00 per month which would increase or decrease as the general cost of living index moves a

point up or down the basic cost of living index figure to be the current cost of living index figure stated at the hearing to be 130.6 quoted unofficially by the Canadian Press as being the cost of living index figure as of March 1, 1947.

3. In said Exhibit 3 there were certain tabulations relating to proposed revision of classifications and proposed new rates which indicated that in some cases some employees would be receiving a lower rate than they are now receiving. In this respect the Company informed the Board that it had been necessary in preparing such tabulations to set out these apparently lower rates but that the Company's proposal did not involve any actual rate reduction among its present employees but any such reduction would apply only to future employees and that any employee now receiving more than the rate shown in the tabulation would continue to receive his present rate.

4. The Board, Mr. McNish not concurring, is of the opinion that the Company's proposal as presented to the Board and set forth in the Company's brief filed with the Board as Exhibit 2 and as set forth in Exhibit 3 is fair and reasonable in the circumstances except that the proposed monthly offer of \$5.00 per month should be increased to \$8.00 per month such monthly rate of \$8.00 per month to be revised upwards or downwards with each one full point rise or fall in the general cost of living index on the basis of 25c. per week per point based on four and one-third weeks per month the basic cost of living index figure to be the figure as of March 1, 1947 stated unofficially to be 130.6.

5. In coming to this conclusion we have taken into careful consideration the position of the companies concerned, the particular circumstances pertaining to those companies, the fact that the companies are public utilities serving large rural as well as urban areas and the principle that in dealing with wage increases regard must be had not only to the employees concerned but to the rights and interests of the general public and the advisability in the national, local and individual interest of endeavouring to keep in balance as far as possible the whole economic fabric including the relation of wages to commodity prices and the cost of living.

6. Mr. McNish does not concur in this part of this report. His dissent in this respect is appended as Schedule 2 hereto.

IV

UNION SECURITY

The majority of the Board consisting of the Chairman and Mr. McNish are of the

opinion that some measure of union security be granted to this Union. Three suggestions were advanced by the Union, namely—

- (a) Union shop clause
- (b) Maintenance of membership clause
- (c) Rand Formula

They did not recommend a Union shop clause but in considering the alternative of Maintenance of membership or the Rand formula they were of the opinion that the Rand Formula was preferable, particularly in view of the fact that this Formula as a measure of union security in labour agreements is the one most prevalent in the Windsor area. For that reason they recommend that any agreement or agreements should contain a clause following the Rand Formula.

Mr. Evans does not concur in this part of the report. His dissent in this respect is appended as Schedule 3 hereto.

V

RECOMMENDATIONS

1. The Board recommends that collective bargaining agreements be entered into between the respective parties following the lines of the agreement of March 1, 1946 between Local No. 1 and the Windsor Gas Co. but making the necessary changes to carry out the recommendations of this report.

2. The Chairman having agreed with Mr. McNish on the subject of Union Security and with Mr. Evans on the subject of wages sets out his reasons therefore as Schedule 4 hereto.

All of which is respectfully submitted.
10th June 1947.

(Sgd.) J. J. COUGHLIN.

R. R. EVANS.

J. D. McNISH.

Schedule 1

ARBITRATION CLAUSE

The Arbitration Board shall consist of one member to be nominated by the Company, one member nominated by the Union and the two thus nominated to select a third member.

If the persons so nominated fail to agree in the selection of the third member of the Board then the third member shall be named by the Minister of Labour for the Province of Ontario who shall choose as such member a Judge of the Supreme Court of Ontario or a Judge of the County Court from any County in the Province of Ontario other than a Judge of the County Court of the County in which the dispute arose. The third member shall be the Chairman. In

the event of the failure of either party hereto to appoint its nominee to the said Board within 10 days from the date of the request for arbitration by either of the parties hereto then the Minister of Labour for the Province of Ontario shall nominate a member of the Board to act on behalf of the party so failing to make such appointment.

Schedule 2

RE: UNION GAS COMPANY LIMITED

While the majority of the Board feel that due to the increasing cost of living in Canada some alleviation should be given to the employees concerned by way of a cost of living bonus, Mr. McNish takes the view that the cost of living bonus based on the cost of living index introduced in the earlier years of the War to meet then existing conditions was abandoned in February, 1944, by the Government of the day for two reasons—firstly, because it tended to increase the inflationary spiral of wages when tied to the cost of living index and secondly, by that date standards of living had been raised to a point from which employers and employees might thereafter negotiate future wage increases. If the majority of the Board are desirous of providing for the admitted rising cost of living by now granting a cost of living bonus, then he submits that the cost of living index as of the 1st of February, 1944, should be the base and all rises in the cost of living index from that date should be compensated for on the former formula laid down for the payment of cost of living bonuses. If this were done then it would be found that a higher rate of wages would have to be paid than could otherwise be arranged by negotiation.

He considers that one must project the present wage demands of the employees affected in this dispute against the general wage pattern in industry as a whole, whether it be government, public utilities or private commercial enterprise since February 1, 1944. It will then be found that the employees affected by this dispute have had no earnings increase since that date—although their hourly rate has been increased by reason of the lessening of the hours of work from 48 hours to 44 hours as a result of negotiation between the Company and the Union in January, 1946. This situation undoubtedly places the employees of this Company in a much more unfavourable position than workers generally in Canada who in the period between February 1, 1944, and December 31, 1946, have received increases in wages equivalent to an average of 16 cents

per hour. It is also true that during the first few months of 1947 workers have been demanding and in many cases receiving increases over rates established in 1946. That is no doubt the reason why the Union in this dispute are requesting 15 cents per hour over what they demanded in January, 1947.

While one cannot be oblivious to the danger of spiralling costs of goods and wages, at the same time one must be equally concerned with the standard of living established for Canadian workmen during the war years and which standard should be maintained even if it entails slightly higher costs for goods and services. It is not open to question that employees of Union Gas Company Limited are in a somewhat different position than employees in competitive manufacturing or construction industries. Their employment is constant and not subject to the vicissitudes of weather, seasonal lay-offs, or hold up on production for other reasons. As compensation for this the employees of this Company should be prepared to sacrifice something in the way of financial gain for security of employment. For the foregoing reasons Mr. McNish is of the opinion that an overall increase of 12 cents per hour as originally demanded by the Union is justified and should be paid. While this appears to be a substantial increase it still leaves the employees affected behind the wage pattern of industry generally, which is compensated for by the security of employment.

With regard to the differential of wage rates as between Windsor, Sarnia and London, in the absence of any evidence other than that submitted by the Company he is prepared to accept their scale of differential i.e.—Sarnia 3 per cent below Windsor and London 3 per cent below Sarnia. It would be preferable however if these percentages could be converted into cents per hour.

With respect to wage classification, if it is necessary for him to do so, he recommends that a maximum period of three years be set as the appropriate time limit from commencing employment in the various classifications to reaching the maximum rate. This would appear to be the general practice in comparable companies or commissions and differs from the Company's six year period and the Union's demand for a two year period.

Mr. McNish states that in arriving at his conclusion on this branch of the dispute he has not lost sight of the representations made on behalf of the Company as to its ability to pay. While it is admitted that this Company did not make profits comparable to many industrial concerns during the war

years, they still made substantial profits which have been retained and are now being used for a program of expansion designed to ensure the continuance of the Company's operations for a number of years. Subject to the happening of a certain event, viz.:—the bringing into Canada of 500 million cubic feet of gas from the United States, a rate increase will go into effect which will affect all the municipalities now served by the Company, and this increase will substantially increase the Company's earnings. No accurate figures were available to show exactly what these increased earnings will amount to but Mr. McNish is satisfied that they will be sufficient to pay the increase recommended by him and still leave sufficient to pay an adequate return to the shareholders of the Company.

(Sgd.) J. D. McNish.

Schedule 3

DISSENT

1. I regret that I am unable to concur with the recommendation of the Chairman and Mr. McNish relating to Union Security as set forth in Article IV of the Board's report.

2. The existing agreements relating to the Windsor district and to the Sarnia district which are now the subject matter of renewal accorded to the Unions in question a voluntary revocable check-off and the Company was prepared to carry forward such provisions into the renewal agreements now being negotiated and to incorporate similar provisions in the agreement now being negotiated with respect to the London district.

3. The voluntary revocable check-off has been in effect with respect to the Windsor and Sarnia districts for a considerable period of time. The evidence disclosed that the Unions were receiving by way of check-off Union dues from over ninety per cent of the employees and indicated that the few who had not signed check-off authorization cards were largely employees of many years' standing who felt that they had the right to finish out their time with the Company free of any impost being placed upon them as a condition of their employment. With this contention on the part of these employees the Company agreed and indicated that it was strenuously opposed to any impost being placed upon any employees as a condition of their employment. The Union failed to and in fact made no attempt to establish that compulsion was necessary to any extent or to any degree but rested on a bare demand without justification for an extension of the

adequate rights and privileges already possessed.

I am of the opinion that no useful purpose would be served by imposing compulsion where compulsion is not needed and that the imposition of compulsion in the circumstances at hand may well create a discord which has hitherto not prevailed. The principle of compulsion as a negation of man's freedom with respect to the earning of his livelihood does not readily lend itself to the democratic theory of life and in the circumstances existing in this instance and the absence of any necessity or utility I am impelled to dissent from my confreres' views as set forth in Article IV of the Board's report.

June 14, 1947.

(Sgd.) R. R. EVANS.

Schedule IV

CHAIRMAN'S STATEMENT

In my statement of reasons for the Board's recommendations, I use the figures referring to the Windsor employees and Windsor wage rates, first to avoid the use of too many statistics and secondly because the conclusions with regard to Windsor will apply to the other two areas as well.

I am impelled to a lengthy setting out of these reasons because the recommendations of the Board will affect not only the Windsor employees but also all the residents of Windsor who use gas for cooking or heating or for industrial processes. These users together with those in the other areas served by the Company are the persons who must furnish the money with which the Company must pay wages as well as meet all its other expenditures including dividends.

The average citizen has neither the time nor the opportunity to study the figures enabling him to decide what a fair settlement of the dispute existing here would be and it is therefore incumbent on me as Chairman of the Board to set out with as much clarity as I may the reasons why the Board after an exhaustive study of all the facts has made the recommendations set out in its report and in doing so I propose to deal with the three questions most in dispute; namely, Union Security, Company's ability to pay and wage rates.

UNION SECURITY

The conditions existing in Canada at the present time, the period of reconstruction following the tremendous destruction of the Great War, makes imperative a closer co-operation than has ever heretofore existed between Labour (represented by Unions) and Capital (represented by Management).

Whatever tends to hinder that co-operation cannot fail to be a blow at the prosperity of the country and at the raising of the standard of living of its inhabitants.

Among the things which in my opinion tends to hinder that co-operation is the refusal by Management to accord to Unions representing their employees a reasonable degree of Union Security.

Particularly is this the case when (as is the situation here) the Unions in question represent nearly one hundred per cent of the employees.

The recommendations of the Board as to Union Security are moderate and reasonable and it would seem to me that the rejection of same by the Company could not fail to be interpreted by the employees as an exhibition of antagonism to Unions.

This in turn would tend to create in the Unions the desire to fight instead of the desire to co-operate and thus make the goal which the country seeks just so much more difficult to attain.

COMPANY'S ABILITY TO PAY

There were presented to the Board unusually complete records of the operations of the Company for the ten-year period commencing March 31, 1936, and ending March 31, 1946.

The Union's insistence upon the Company's ability to pay appears to have been based on the Annual Report of the Company for the year ending March 31, 1946. That report shows a net profit of 59 cents per share as against a profit of 36 cents per share in the preceding year. These figures seemed to indicate a much improved position and apparently raised in the minds of the Union the question: "Are we not entitled to an increase in wages on account of this improved position?"

If the wages of the workmen were lower than the average paid to men engaged in the same type of work and under similar conditions and if 59 cents per share is more than a fair return to the shareholders then the answer to that question should in my opinion be in the affirmative. The first thing to consider then is whether or not the profit of 59 cents per share is more than a fair return and therefore one indicating ability to pay higher wages.

The company stock is divided into 706,199 shares with no stated par value. The same 1946 report indicated a book value of approximately \$1 per share. The book value does not necessarily represent either the actual cash put into the enterprise by the shareholders or the actual value of the shares. Either of these items can be either above or below the book value.

For want of any better guide as to what is a fair return to the shareholders, I refer to the operations of the company for the first six years of the ten-year period above referred to. I confine it to the six years because at the end of that time a wartime regulation imposed a crippling blow which affected the subsequent four years' returns most adversely.

It is difficult for the average man to "humanize" the figures contained in the financial reports of a large corporation. I shall attempt to do it by reducing the figures to show the condition of a shareholder holding 1,000 shares for each of the first six years throughout the ten-year period and his position during the subsequent four years. Such a shareholder might be taken as representing a man putting the savings of a lifetime in the stock of this Company.

The figures are confined to net profit and dividends for the Company's fiscal year ending 31st March of each year and are as follows:—

Year	Net profit per 1,000 shares	Dividends paid per 1,000 shares
1937	\$ 990	\$1,150
1938	1,310	700
1939	1,310	800
1940	1,600	1,000
1941	1,410	1,000
1942	1,220	1,000
Six year average....	\$1,307	\$ 941
1943	340	200
1944	390	—
1945	360	—
1946	590	—
Four year average...	\$ 420	\$ 50

Nothing further is required to show that the figures of the 1946 financial report instead of indicating a flourishing condition of the company showed on the contrary the continuation of a very bad financial condition.

The causes for the change from the good position of the first six years compared with the bad condition of the last four years of the period may be summarized as follows:

A. The government's war order compelling the Company to discontinue the winter heating of dwelling houses, a very profitable business, in order to supply gas for war industries at a price that for a portion of 1942 wiped out all profit but later (by a government sanctioned price increase) produced a small profit as shown in the tabulation above.

B. The necessity of replenishing the dwindling supply of natural gas from the Company's own gas fields by manufacturing artificial gas at its oil gas plant at very considerable cost.

C. The contract for the taking of natural gas from the Texas field has not yet commenced to take effect and cannot improve the position of the Company until heavy expenditures for pipe line is incurred. The gas so obtained will be at a cost necessarily much higher than the "free" gas from the Company's own field.

So much for the past ten years. What of the future?

The Company has a contract with the municipalities served by its lines for an increased rate to be charged its customers when the Texas gas comes through but it is estimated it will be two years before the effect of the new arrangements on the Company's financial condition can be measured. In that interval will be shown what success the company will have in getting back its 10,500 domestic consumers cut off in the war years. While it is reasonable to expect some considerable betterment of the company's position he would indeed be an optimist who would predict its ever recovering its pre-war position.

My conclusion from the above is that the Company's profits for the past four years form no basis for a demand for increased wages and that the prospects for the betterment of its position within the life of the proposed wage agreement do not justify an increase above the amount recommended by this Board.

WAGES

This Company furnishes to its employees continuous employment. Practically all of them are assured of 52 weeks' pay in every year.

This radically differentiates it from industries that can offer only irregular employment.

In Windsor the rate prevailing in such industries is almost wholly based on the automobile industry which at the present time is enjoying unusual prosperity.

There is in the pockets of a section of the general public money that was easily made or easily earned during the war. This creates a very buoyant market for automobiles and for all luxury products.

That that section forms but a small percentage of the general public is pretty well demonstrated by the recently announced income tax returns for 1946 which show that the number of persons in the whole of Canada, paying taxes on incomes of \$5,000 and over is only 74,384, while those paying on incomes less than \$5,000 number 2,468,000 and of such latter number 93 per cent are in the bracket below \$2,000.

When to this is added the further fact that the one-third of Canada's population is engaged in agriculture and of that group the earnings of ninety-five per cent are too low to come within the income tax class, it will be seen how small is the section of our population whose ability to pay is the measure by which present prices are set.

When the present active market set by that comparatively small percentage of our whole population is satisfied (and it should not take long to satisfy it) then if the industries producing luxuries and the other industries which follow their lead want to stay in business the prices must be brought down to the purchasing level of the great mass of the people. This will necessitate that co-operation between workers and management referred to under Union Security and will mean some sacrifice of profits on the part of Capital and some sacrifice of wages on the part of the better paid groups in Labour accompanied by increased production of all groups.

These sacrifices should be compensated for by an increased continuity of employment of Labour and an assurance of reasonable profit for Capital. By the voluntary co-operation of Labour and Capital this result can be attained now in a painless way. Otherwise it will not be attained until it is forced upon them the hard way when the loss of markets for Canadian factories will be followed by closed down factories, workers without jobs, Capital without returns and a depression equalling or more probably exceeding that of the 30's.

I will now proceed to show the wage fluctuations in the Windsor employees of the Union Gas Company during the same ten year period referred to above.

In the year 1937 the average annual wages of the men then working for the Company in the Windsor area was \$1,390 of whom 38 are still in the employ of the Company and some have been pensioned.

The following table shows the average wages for each of the ten years and also repeats the figures for the earnings on 1,000 shares of Gas Company stock for the purpose of more ready comparison:—

Year	Average annual wage	Net earnings on 1,000 shares
1937	\$1,390	\$ 990
1938	1,390	1,310
1939	1,440	1,310
1940	1,490	1,600
1941	1,590	1,410
1942	1,710	1,220
1943	1,900	340
1944	1,900	390
1945	1,850	360
1946	1,810	590

The figures for annual wages for 1943 and 1944 show higher amounts than those of 1945 and 1946. These are accounted for by an increased number of overtime hours being worked in the former years necessitated by the pressure of war conditions.

There is expected to be much less overtime during the life of the proposed contract and in the calculation of the annual increase to be received by the present employees under the new schedule recommended by the Board overtime for hours worked other than on Sundays and holidays is excluded.

The prospective average annual wage of the presently employed wage earners covered by the contract on the basis of the schedule recommended by the Board including the cost of living bonus but excluding overtime

pay except for Sundays and holidays will amount to \$1,968, a figure substantially higher than the peak reached by the same workers in the war period. With that there will be also payable by the Company an allowance for additional cost of living in case there is a further rise in such costs.

These considerations also applicable to the London and Sarnia employees in an approximately equal degree lead to the same conclusion as that reached in regard to the Company's ability to pay; namely, that they do not justify an increase in wages above the amount recommended by this Board.

Windsor, June 10, 1947.

(Sgd. J. J. COUGHLIN,
Chairman.

Report of Conciliation Board in Dispute Between Vancouver Barge Transportation Co., Vancouver, B.C., and Local 501, International Longshoremen's & Warehousemen's Union (CIO-CCL)

On June 2, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: J. Edwin Eades, Vancouver, Chairman, appointed by the Minister of Labour on the recommendation of the other two members of the Board, Hugh Gordon and Wm. White, both of Vancouver, appointed on the nomination of the employer and employees respectively.

Report and Recommendation of Chairman of Board

To:

The Honourable HUMPHREY MITCHELL,
Minister of Labour for Canada,
Ottawa, Ontario.

Members of the Board:

William L. White.
Hugh W. Gordon.
J. Edwin Eades.

A preliminary meeting of the Board was held on the 25th day of March A.D. 1947, the members were sworn, Mr. J. E. Eades was selected as chairman. The Order of the Honourable the Minister of Labour for Canada, dated the 22nd day of February, 1947, appointing the Board was filed as Exhibit I. The Order of the Minister, dated March 12, 1947, appointing Mr. Hugh Gordon as a member on the recommendation of the Employer was filed as Exhibit II. The Order of the Minister, dated March 12, 1947, appointing Mr. William White on the recommendation of the Employees was filed as Exhibit III. The Order of the Minister, dated March 18, 1947, appointing Mr. J. E. Eades on the recommendation of the said two members was

filed as Exhibit IV. Procedure was agreed upon and time and place selected for the submissions of the parties.

Sittings were held at the Court House, Vancouver, B.C., at which the Union was represented by Mr. Emil G. Bjarnason and Mr. Ed. Wennerlow and the Company was represented by Wilfrid H. Heffernan, Esq.

The Union presented a brief and then called Angus Runcie, Harold Jure and Monte Wright to give evidence. The Company called Harry Leonard Coville, Charles Edward Wilson and William Raymond Dunwell. The witnesses were examined in chief, cross-examined and re-examined. Mr. Heffernan, on behalf of the Company, presented argument; Mr. Wennerlow on behalf of the Union, presented argument and Mr. Heffernan replied.

The sole question involved in these conciliation proceedings is that of wages. Section 13 of the Collective Bargaining Agreement between the Company and the Union, dated February 18, 1947 (Exhibit XI) is as follows:—

Section 13 WAGES:

The scale of wages payable by the Company to its employees shall be:

Straight time:

- (a) Hand truckers, 80 cents per hour.
- (b) Checkers, floor freight loaders, jitney and winch drivers, 82 cents per hour.
- (c) Barge loaders, 87 cents per hour.

Overtime:

- (d) Hand truckers, \$1.20 per hour.
- (e) Checkers, floor freight loaders, jitney and winch drivers, \$1.25 per hour.
- (f) Barge loaders, \$1.30½ per hour.

The Company, however, agrees to add a supplement to the above wages of any further increase reached through negotiations or arbitration.

The Union requested \$1 per hour on all categories while the Company based its refusal to pay any increase on the ground of inability to pay and the Company's position was that if and when it was able to pay an increase it would be glad so to do. The Union's demand is obviously made on a bargaining basis, that is, it is a preliminary demand made with the expectation of settlement at a lower figure because the evidence produced showed that the men did not want similarity of pay in the various categories and from the evidence given as to the work done payment of \$1 per hour across the Board would be a manifest injustice to certain of the employees.

A great deal of the evidence was directed to the question of whether or not the men employed in this industry were longshoremen and were therefore entitled to the going wages for longshoremen. It is not necessary to reach a decision on this point for two reasons. Firstly, because the Union did not claim that the longshore rates should be applied in this industry and, secondly, because both sides agreed that the wage rates for the work done is presently too low in comparison with going wages.

The Board met on two occasions and reviewed the evidence and the arguments submitted but was unable to reach a unanimous or majority conclusion. It became evident that there were three conflicting points of view which could not be reconciled and each member accordingly is submitting his own report and recommendation.

In the report of Mr. G. R. Currie, conciliation officer (Exhibit V) it is stated that

At a second meeting on February 6 the Company submitted a proposal to pay three cents per hour wage increase effective thirty days prior to the date of any freight increase which might be approved by the Wartime Prices and Trade Board. A copy of the offer is attached.

And Mr. Currie states further

At a joint conference held on February 12 Mr. Ed. Wennerlow, International Representative, International Longshoremen's and Warehousemen's Union, advised the Employer that the wage proposal was unacceptable. He stated that the minimum amount that might be acceptable would be a ten cent per hour general increase and this amount might be approved in the form of an immediate five cents per hour and five cents per hour when freight rates were increased.

The Company did receive a freight increase on April 2, 1946, of fifty cents per ton.

The Company produced financial statements and its auditor and the former Assistant Manager submitted to cross-examination with respect to same and with respect to the Company's operations. The Company operated at a loss in 1946 even when certain large repairs were carried forward. The projected loss for 1947 is considerably greater. Freight increases have been sought since 1940 but no increase was granted until March, 1946, when a surcharge of 6 per cent was allowed. In November, 1946, a 50-cent increase was granted but the surcharge taken off and the increase could be applied only on certain runs because it had not been allowed to competitive lines. The new increase can be applied to the major part of the Company's business. In the meantime the cost of repairs, supplies, provisions, fuel and wages has advanced greatly. It seems clear that a reasonable increase in freight rates is the only way whereby the Company can meet its proper obligations to its employees and to its shareholders.

I do not consider that the present wages are adequate for the work done nor do I consider that the Company's difficult financial position should be made so serious as to invite disaster. The three cents per hour suggested by the Company on February 6 is not adequate for these employees. The wages to the approximately thirty men involved in this dispute represent a very small part of the Company's expense. For example, wages on boats in the 1946 financial year represented almost \$50,000. On the basis of an eight-hour day and forty-four hours per week an increase of five cents per hour would mean about \$3,500 increase in the Company's operating expense. This figure will not materially add to the gravity of the Company's financial position but will be of some material assistance to the employees involved.

I would recommend that the Company pay to the employees involved in this dispute an increase of five cents per hour across the board for straight time and a corresponding increase for overtime and that such increase be retroactive to the 2nd day of April, 1947, when the freight rate increase was allowed.

All of which is respectfully submitted.

Dated at Vancouver, B.C., this 27th day of May, A.D. 1947.

(Sgd.) J. E. EADES,
Chairman.

Minority Report

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

As a member of the Board of Conciliation appointed by you in the above dispute, I have heard the evidence presented by both parties of the dispute and I am pleased to submit the reasons for my recommendation.

I was very impressed by the manner in which the evidence was presented by Mr. C. E. Wilson, Mr. W. R. Dunwell and Mr. H. M. Coville. I was equally impressed by the three witnesses of the Union who gave me the impression of being sincere and hard-working citizens who have a desire of remaining with the Company.

The Union endeavoured to establish the fact that the employees of the Company were longshoremen performing comparable work to the longshoremen of the Pacific Coast. Whereas, the Company classified the employees as Specialized Warehousemen. There was no conclusive evidence that the employees were performing the duties of longshoremen. In fact, it appears to me that the duties performed and the working conditions were such as to place these employees in a classification peculiar only to this Company.

It seems to me that the first consideration of an employee is the preservation of his status as an employed person, working conditions, security and the like being reasonably satisfactory. It was established by the Union's witnesses that the working conditions were reasonably satisfactory. In fact these same witnesses stated or intimated that they had not attempted to transfer their employ to the Shipping Federation of Longshoremen, which pays considerably higher wages, because they enjoyed the steady work, security of job, the pleasant working conditions and the happy management-employee relations of the Company. In addition, one of the above-mentioned witnesses stated that he was sure the Company would increase the wage rates when they were able to do so. It appears, when everything else is taken into consideration, that the present wage rates are not excessively low.

I feel that the prime consideration in this dispute is the Company's ability or inability to pay increased wage rates. The Company on several occasions expressed its sincere desire to increase the wage rates of its employees. It was conclusively proved by the Company, from its financial statements filed, that they were not in a position to

increase rates at the present time. The profits in 1943 and 1944 were practically nil. The loss in 1945 increased from \$410.95 to \$5,097.57 in 1946 and to \$12,481.49 for only the first quarter of 1947. There was never any question that the Company was operating in an inefficient manner. The recent losses were due to legitimate factors beyond the control of the Company. The Company and its Directors firmly believed that the present unprofitable conditions would not continue when the Company is able to put additional freight rate increases into effect.

This does not seem to be the time for the Union to press for wage demands which could quite conceivably force the Company into bankruptcy and put the employees out of work. In consideration of the desirable working conditions and the financial status of the Company, I cannot at this time recommend any wage rate increase. However, on February 6, 1947, the Company made this statement, and I quote from the Special Conciliation officer, G. R. Currie, Report of February 20, 1947:—

At a second meeting on February 6, the Company submitted a proposal to pay three (3) cents per hour wage increase, effective thirty days prior to the date of any freight increase which might be approved by the W.P.T.B.

The Company received a freight rate increase; however, they state they were able to put this into effect on only a portion of their operations. Although this increase may very well make this Company's existence even more precarious, I feel that the Company must fulfil their promises and put this wage increase into effect.

Accordingly, for the above reasons, I recommend that the Company forthwith put into effect a wage increase of three (3) cents per hour.

All of which is respectfully submitted.

Dated at Vancouver, B.C., this 26th day of May, 1947.

Member.

Minority Report

Mr. J. EDWIN EADES,
Chairman,
Conciliation Board.

In reviewing the evidence presented in this case, it should be pointed out that in the bargaining agreement, dated February 18, 1947, covering all points except wages, it was agreed that the question of wages should be dealt with by the board. The Company further agreed to be bound by any decision reached through negotiations or arbitration.

At the first meeting of the board, the Company, represented by Mr. Heffernan, stated that the Company did not deny, but agreed that an increase in the employees' rate of pay was necessary, but stated that the Company was not in a financial position to make an increase. Therefore, the question to be decided by the board was one of determining the Company's financial position, and to determine the amount that the Company should increase the rate of pay, if they found that the Company was in a position to do so.

In view of the fact that the Company agreed that an increase was due the employees, it is only necessary to deal with the Union submission briefly.

It was established that the longshoremen's rate of pay for similar work was \$1.25 per hour, while employees of the Great Northern Railway Company, doing almost identical work, was \$1.19 per hour, and employees of the Shipping Federation, Coastwise Section, was \$1.17 per hour, plus 3 cents per hour in lieu of holiday pay.

Therefore, the Union submission was for a flat rate of \$1 per hour for barge men, pilers, checkers, floor freight loaders, jitney and winch drivers, truckers, and all other categories.

Considerable argument was advanced to prove that the work done by the employees, if not the same as longshoremen, was at least very similar.

Statistics were also quoted to prove that in view of the sharp increase in the cost of living, the rate requested by the employees was a fair and reasonable one.

In dealing with the Company submission, the Company had prior to conciliation, agreed to open their books to the board, in order to prove their contention that they were unable to make the necessary increases. This position was reiterated by Mr. Heffernan on behalf of the Company at our first meeting. However, at the next meeting the Company refused to open their books as they had formerly agreed to do, but instead stated they would give the board a financial statement of their operations for 1946, and the first three months of 1947, drawn up by a chartered accountant. The majority of the board felt that the books should be available, if required, but in view of the company's refusal, agreed to treat the financial statement in its merit.

Accordingly what purported to be the financial statement of the Company was submitted showing a loss on operations for the year of \$267.83, and a decrease in the shareholders' equity of \$8,726.26, for 1946. In

their statement for the first three months of 1947, however, their total loss was stated to be \$12,394.49.

The Company claimed that all costs incurred in the first three months of 1947 were apportioned out over the twelve-month period for 1947. This statement was found to be incorrect as one example of licences showed the total licence cost for 1946 was \$305, while for the three-month period in 1947 was \$230, which would bring the licences for 1947 up to \$920. The Company admitted that their licence cost for 1947 would be the same as 1946. Also their figure of \$4,525 for compensation costs for 1946 was questioned and it was subsequently found that the above figure gave the Company a credit of approximately \$500 with the compensation board.

The repair bill on the Company tug boats was closely questioned, and the Company admitted that during the war a minimum of repairs were made; consequently in 1946 major overhauls were necessary, which does not give a true picture of operating expenses; also their estimated costs of repairs in 1947, in addition to \$25,704.23 in 1946, were \$39,034.64, a figure I contend that is not reasonable inasmuch as it represents over 21 per cent of the Company's total assets of \$182,000. The Company's estimated cost of operation of three vessels for 1947 is \$85,130.88, as compared to \$52,835.67 for four vessels in 1946; all estimated figures for 1947 show a high percentage increase over 1946, and accordingly show a loss on operations for 1947. This, I submit, is not a true and accurate picture of the Company's operations.

The Company contention that an increase in freight rates is necessary before a wage increase is granted, I find is not valid, as they were granted one increase in the latter part of 1946, and an additional increase on April 1, 1947, both for 50 cents per ton. The last increase granted has not been put into effect, in all phases of their operations; this is attributed to competition. Therefore, I cannot see how additional increases will help in the matter of wages.

Therefore, I am of the opinion the Company has not proved their contention that they are not able to meet any wage increase, an opinion that was concurred in by the National War Labour Board in 1946, when the Company advanced the same argument, that they were not in a financial position to grant wage increases; the Board found that they had not established their case and increases were granted.

In view of the fact that the Company agreed to grant a three cents per hour increase thirty days prior to an increase in

freight rates, and that the freight rate increase was granted on April 1, 1947, and further that the Union had agreed to give favourable consideration to a ten cents per hour increase, five cents per hour immediately, and an additional five cents per hour when a freight increase was granted.

I find that in view of the evidence submitted, that the request of the Union is a fair and reasonable offer and I so recommend.

Respectfully submitted.

Appointment of Industrial Disputes Inquiry Commissions under Wartime Labour Relations Regulations

WHEN the Wartime Wages Control Order, 1943, as amended by Order in Council P.C. 4904 of November, 1946, was revoked on March 31, 1947, by Order in Council P.C. 1166 there were certain cases pending which, if not disposed of, might create an industrial dispute. The cases all involved appeals from decisions of Regional War Labour Boards. Since the National War Labour Board no longer had jurisdiction to hear the said appeals, the Minister of Labour on April 3, 1947, appointed Mr. C. A. L. Murchison, of Ottawa, who was formerly chairman of the National War Labour Board, as an Industrial Disputes Inquiry Commission to confer with the parties and to report to the Minister. The Commissioner's findings and recommendations have now been released to the parties and brief summaries thereof are reported below. Formal reports by the Commissioner proved unnecessary in four of the appeal cases which were under development as of March 31, because of withdrawal, the signing of a collective agreement or other reason.

* * *

The Thetford Foundry, Ltd., Thetford Mines, P.Q.

On August 20, 1946, the Catholic Syndicate of Foundry Employees of Thetford Mines, Inc., applied to the Regional War Labour Board of Quebec for an order directing the Company to increase wage rates generally by 8 cents an hour and, in some cases, by 10 cents an hour.

Apparently some time elapsed before the Company filed its counter-submission to the application, and it was not until January 16, 1947, that the Regional Board issued its Finding and Direction. This called for an increase in wage rates of 8 cents an hour with effect from March 15, 1946, which was apparently the renewal date of the collective agreement between the parties.

The Company appealed the Regional Board's decision as to the effective date of the wage increase, claiming that it was

financially unable to pay the increased rates for the retroactive period and that this financial condition continued until March 3, 1947, when the Company received permission to increase prices on its goods and services.

The Commissioner reported that in his view the Regional Board was fully justified in directing the increases in wage rates, and that he would confirm its decision in its entirety were it not for the financial position of the Company. After careful consideration of the factors involved, and not forgetting that the Company was responsible in large measure for much of the delay experienced in the case, he recommended that the wage increases be made effective from January 16, 1947, the date of the Regional Board's decision.

Children's Shoe Manufacturing Co., Ltd., Quebec, P.Q.

The Union Protectrice des travailleurs en Chaussures de Quebec applied to the Regional War Labour Board for Quebec for an order directing the Children's Shoe Manufacturing Co., Ltd., to increase piece-work rates for approximately 34 operations in the Company's plant in Quebec City. The Regional Board referred the applications to the Quebec Shoe Industry Inquiry and Investigation Commission, and in due course adopted the Commission's report as the basis for its decisions which were made effective December 3, 1945 and January 15, 1946, the dates of the Union's applications. An appeal by the Company took exception to the piece-work rates for edge trimmers and assemblers, as well as to the effective dates of the Regional Board's orders. After hearing oral submissions, the Commissioner found that there was no actual dispute on the piece-work rates for edge trimmers. There was, however, a dispute over the rate for assemblers and, in all the circumstances, the Commissioner stated that the piece-work rate offered by the Company was fair and reasonable, and that the rate directed by the Regional Board should be set aside.

With regard to the effective date of the Regional Board's decisions, the Commissioner pointed out that it had been the practice of the National War Labour Board not to interfere with the discretion exercised by Regional Boards unless it was clearly indicated that the Board erred in its appreciation of the facts or of the law, or both. In this case, the report of the Quebec Shoe Industry Inquiry and Investigation Commission was dated August 12, 1946. Further, it was pointed out that the Provincial Decree providing for increases in minimum hourly rates in the shoe industry was published on August 3, 1946. After careful consideration of all the facts and circumstances, the Commissioner came to the conclusion that the Regional Board erred in fixing the effective dates of its decisions. On the other hand, the Company knew by June 1, 1946, of the increases which were to be made in the minimum hourly rates, and indeed adjusted its piece-work rates from that date. The Commissioner reported that in his opinion it would be reasonable to adopt June 1, 1946, as the date upon which the Company should be required to adjust the piece-work rates for its several operations as directed.

Weldrest Hosiery Co., Ltd., Farnham, P.Q.

Upon the application of the Federation nationale des Employes du Bas faconne et circulaire, the Regional War Labour Board for Quebec on January 16, 1947, directed the Weldrest Hosiery Co., Ltd., to increase piece-work rates for certain occupational classifications in the Company's hosiery mills at Farnham, P.Q. The Company appealed to the National War Labour Board from that direction. The report of the Commissioner, Mr. C. A. L. Murchison, was made following a hearing of arguments by the parties in Montreal, conducted on April 23. While opposing the Union's application, the Company submitted a revised piece-work rate schedule which represented a substantial increase over the previously existing rates. The Regional Board had directed one of its officers to investigate and report upon the rates generally prevailing in the hosiery industry in the Province of Quebec. The decision of the Board was based upon its investigator's report. The Company contended that the Regional Board's decision ordered rates to be established for occupational classifications which were not found in the Company's plant; and on the other hand, it omitted to provide rates for occupational classifications which did exist in the plant. Further it was argued that the rates directed by the Board for certain classifications would

provide earnings considerably above what was thought to be just and reasonable, and would also disturb differentials in earnings which had previously been established for the several classifications in the plant. The Union contended that the Regional Board's decision should not be disturbed as it was based upon an investigation of rates in the industry in the province, and that the rates fixed by the Board were still much lower than those prevailing generally.

The Commissioner pointed out that operations differed in the several plants covered by the investigation. The speeds of several machines and methods of production varied according to plants. Differences also existed in production costs of hosiery made from nylon as compared with those of hosiery made from rayon. In view of such factors, the Commissioner dealt separately with each operation, and by this means was able to obtain agreement between the parties upon the piece-work rates for 14 classifications. With regard to the rates for five classifications remaining in dispute, the Commissioner confirmed the Regional Board's decision in respect to two classifications; approved the new rate offered by the Company for two other operations; and recommended a compromise rate for the fifth.

Bennett Limited and Associated Companies and Lynn Innersole and Chambly Industries, Ltd., Chambly Canton and Chambly Basin, P.Q.

The Industrial Disputes Inquiry Commissioner, Mr. C. A. L. Murchison, reported that Local 313, United Rubber, Cork, Linoleum and Plastic Workers of America (CIO) had been certified in May, 1946, as the bargaining agency for all the employees of the above Companies, except office staff and foremen. Later the Union made overtures to the Companies for the opening of negotiations and presented them with a draft collective agreement. The draft agreement dealt with matters over which War Labour Boards had no jurisdiction, but it also expressly provided for changes in wage rates. The Companies did not agree to the terms of the proposed agreement.

The Union then made an application to the Regional War Labour Board for Quebec for an order directing the Companies to increase wages by 20 cents an hour. The Regional War Labour Board referred the issues in dispute to a Board of Arbitration. The Commissioner suggested that in making such a reference, the Regional Board embarked on a procedure quite foreign to what was considered to be its normal function.

After receiving the report of the Board of Arbitration, the Regional Board ordered the Companies to increase wage rates of all their employees by 10 cents per hour, such increase to be effective from July 23, 1946, for employees of Bennett Limited and Associated Companies, and August 10, 1946, for employees of Lynn Innersole & Chambly Industries, Ltd. The Companies appealed the decisions to the National War Labour Board.

It was pointed out incidentally by Commissioner Murchison that the employees in question were on strike at the time he made his report. In this connection, it appeared that issues other than those involved in the wage appeal had played an important part in causing work stoppage.

Pointing out that the majority of the operations performed in the plants in question were paid for under a system of piece-work rates, the Commissioner stated that it was difficult, if not impossible, to implement an order to increase wages by the given number of cents per hour because it imposed on the employer the task of setting up two methods of remuneration. The Commissioner recommended that the decision of the Regional Board be not recognized. He also stated that it seemed clear that the Companies' profit and loss position was such as to have warned the Regional Board against making such a direction. The products manufactured by the Companies were no longer subject to Wartime Prices and Trades Regulations, and the Commissioner stated that it might be that the Companies could increase the prices of their goods, but that without such increases they could not afford to pay the increased labour costs. Whether they could remain in sound competitive positions with higher costs was a matter for the Companies to determine.

In conclusion, the Commissioner urged that the parties adopt a more co-operative attitude one to the other. He stated that they should proceed forthwith to negotiate in good faith

and that if it were impossible for them to conclude a satisfactory collective bargaining agreement without the aid of conciliators, they should make use of the conciliation service of the Province of Quebec, since jurisdiction over such matters had been restored to the province.

Industrial Glass Works Co., Ltd., Montreal, P.Q.

On December 2, 1946, the Regional War Labour Board for Quebec directed the Industrial Glass Works Co., Ltd., to increase the wage rates of hourly-rated employees in the bargaining unit represented by the Glass Blowers' Association of the United States and Canada. The Company applied for leave to appeal which was refused by the Regional Board, but was subsequently granted by the National War Labour Board. A hearing took place before the National Board on March 25, 1947. The Commissioner, Mr. C. A. L. Murchison, reported that during the hearing counsel for the Company argued with much force that many of the occupational classifications mentioned in the Finding and Direction of the Regional Board did not, in fact, exist in the Company's plant. The Company also contended that the rates directed by the Regional Board exceeded those which might be considered just and reasonable.

The National Board requested the parties to enter into negotiations with a view to reaching agreement on the list of occupational classifications and the wage rates therefor. The parties accepted the suggestion and reached agreement upon a proper list of occupational classifications. They also agreed upon the wage rates for most of the classifications. The report of the Commissioner made recommendations concerning the wage rates or ranges of rates which should be paid in respect of 16 classifications upon which the parties failed to agree.

Conciliation Work of the Industrial Relations Branch during June, 1947, under the Conciliation and Labour Act

OFFICERS of the Industrial Relations Branch dealt with 11 industrial disputes during the month of June, involving 15,030 workpeople employed in 38 separate establishments. Of these, 6 were new disputes which originated during the month and 5 were situations which had been untermiated as of May 31, and received further attention in June. These disputes were dealt with under the provisions of the Conciliation and Labour

Act. They were thus distinct from and in addition to the conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton, N.B. The territory of the officer resident in Vancouver comprises British

Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and North-western Ontario; three officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

A report of one case of general interest is given below:—

Coal Miners, Province of Alberta.—In the latter part of May representatives of District 18, United Mine Workers of America, and the

Western Canada Bituminous Coal Operators' Association made a joint request to the Minister of Labour for the appointment of an Independent Chairman of a Committee of Arbitration. The purpose of the Committee was to deal with disputes involving the interpretation of the collective agreement between the parties as to the holidays with pay due to three employees of three mines. The Minister appointed the Hon. Mr. Justice G. B. O'Connor, of Calgary, as Independent Chairman. The decision of the Arbitration Committee as rendered by the Chairman was as follows:

Pursuant to subparagraph (c), page 6, of the printed agreement (effective from October 1 1946, to March 31, 1948, hereinafter called the current agreement) between District No. 18, United Mine Workers of America and Western Canada Bituminous Coal Association, I was appointed by the Minister of Labour for Canada, Independent Chairman of three joint committees to settle disputes between E. North and West Canadian Collieries Limited (Greenhill Mine), between Charles Gillies and Hillcrest-Mohawk Collieries Limited and between Gus Mattson and West Canadian Collieries (Bellevue Mine), as to what holiday credits each of the said miners has earned during the period from October 1, 1946, to March 31, 1947.

The committee met at Calgary on June 7, 1947.

The Union contended:

At the Greenhill Mine of the West Canadian Collieries Limited, Mr. E. North, miner employed by that Company, for the period October 1, 1946, to March 31, 1947, worked 105 days. The mine was idle on account of mine disability or lack of orders for a period of 16 days. In the month of October, 1946, he lost 3 days through sickness, which was properly certified by his attending physician, making a total of 124 days or an average of 20 days per month for the six months' period.

At the Hillcrest-Mohawk Collieries Limited mine at Bellevue, Mr. Charles Gillies worked 114 days in the period October 1 to March 31. He was idle on account of mine disability or lack of orders 10 days, making a total of 124 days.

At the Bellevue mine of the West Canadian Collieries Limited, Mr. Gus Mattson worked 103 days in the period October 1 to March 31. The mine was idle 19 days on account of mine disability or lack of orders, and he was idle 2 days in that period on account of sickness, which was properly certified by his attending physician, making a total of 124 days.

In these three cases referred to, it is the contention of the Union that the men are entitled to 6 days' holidays with pay as the employees mentioned herein averaged more than 20 shifts per month for the six months' period under view.

The Association contended:

Dealing now with the cases involved, we have set out the necessary data in each case separately. Only the period from October 1, 1946, to March 31, 1947, is involved in the dispute, though we have provided data for each half-year.

(Here was given the attendance record of each of the three employees in question.)

HISTORY

The O'Connor award of October 14, 1943, which affected a settlement of the Coal Mine strike, 1943, provided:

Two weeks' holiday with pay at the basic daily wage rate to be granted to such employees who between April 1 and September 30 in any year have continued in the employment of any one employer for at least twelve consecutive months, and provided that such employee has not been absent from his employment for more than ninety days (including Sundays, holidays and vacation) during such twelve month period, except through causes beyond his control.

Appreciating the difficulties of establishing a working procedure with respect to this matter the Union and the Association on May 31, 1944, entered into an agreement containing the following provisions:

1. (a) That holidays with pay would be granted on the basis of one day for twenty-three days worked in any calendar month except February, and for February would be allowed one day for twenty-two days worked, for all such employees who have been in the employ of the company for 12 consecutive months.

Then followed subparagraphs (b) (c) (d) and paragraph 2, which now are repeated word for word in the current agreement, the material parts of which will be quoted hereafter as parts of sections 1, 2 and 3, pages 21, 22, 23 and 24 of the printed agreement.

Order No. 3 of the Board of Industrial Relations of the Province of Alberta, section 2, subsection (a) is:

One year's employment shall mean employment of not less than 275 days of actual work in a year.

Before considering what each party claims took place during the negotiations leading to the current agreement, it should be noted—

1. Each party is, in my opinion, wholly in good faith in stating what he thinks occurred.
2. I reserve for later consideration the legal effect of what is so claimed.

As to these negotiations the Association says:

It will be appreciated from the foregoing statements that adjustments in our Holidays with Pay provisions were impelled, and that in the negotiations for our present Agreement the United Mine Workers proposed, in their memo of August 15, 1946:

Revision of holidays with pay agreement to conform with the 40-hour week. That the total number of credited days in the calendar year be divided by 19 to ascertain the number of holidays due to an employee. Maximum holidays to be 12 days per year; and further that the clause dealing with sickness and compensation be eliminated.

to which we replied in our memo of August 17, 1946:

We appreciate that if a mutually satisfactory agreement is reached on No. 3 above, revision of the Holidays with Pay agreement will be necessary. *In view of the reduced working time, holidays should only be granted to employees who have consistently attended to their work on all available working days.*

The principle embodied in the Union's proposal was impossible of acceptance, and it was so stated. It would have eliminated all incentive for employees to attend regularly at work, it would have condoned absenteeism, and would have resulted only in the setting up of a deferred amount per day additional to the wages paid, this same amount to be paid all employees for idle days, sickness and accident, and this without regard to the individual employee's behaviour in attendance at work when work was available. This same principle is now being put forward in the present dispute, the only difference being that 20 days instead of 19 is being introduced as the divisor.

The first sentence of Section 1 (a) was worked out as an equitable provision, and the remainder of the Agreement was amended only in so far as its provisions may have conflicted with the new provisions.

In later discussions, the representatives of the United Mine Workers pointed out that

a literal interpretation of this clause could work to the disadvantage in some cases of men who actually did attend to their work faithfully, and that they might actually work as many or more days than the mine worked and still not qualify for holidays. We expressed appreciation that this could be so in some few cases, particularly with respect to repair and maintenance men, and for such men as may be employed in steady occupations, and we proposed to take care of that situation by agreeing that any employee who actually worked 240 days in the year, or an average of 20 days per month, would be granted 12 days' holidays with pay, without any question as to the working days he may have lost.

It should here be pointed out that we were offering a premium for attendance at work, in that while the normal working week is five days, we were offering twelve days' pay to men who would earn it by working.

To further prove that "working shifts" was intended and understood by all to mean "working shifts", we will introduce witnesses (Mr. Wm. Wilson and Mr. V. A. Cooney) who took notes during the negotiations, and will be examined as to these and their intent.

Mr. Cooney produced a draft proposal for an agreement in which he had inserted in pencil during the negotiations before the word "day" the word "working" and in which he has changed the words "twenty days" to "twenty working shifts".

Mr. Livett, the President and Mr. Stokaluk, the Vice-President of the Union, strenuously deny that they agreed that in order to get one holiday credit a month a miner must actually work an average of 20 days. They point out that under the provisions of Section 2, subsections (a) (b) and (h), and Section 3 (a), pages 22 and 23, employees are "to be considered as not being absent" or "credited with this as a day worked" or their time "counted as time worked" and "will be considered as working time", that is, time lost due to causes beyond the control of the employees is included.

Mr. Livett says that he went from one mining camp to another telling the miners that time lost through causes beyond the control of the employee counted in order to average 20 days a month for holiday credit.

The relevant portions of the current agreement are as follows:

1. (a) That one day's holiday credit will be granted to any employee who has lost not more than one working day during the month. However, if any employee averages twenty (20) working shifts per month

during the year he will be entitled to twelve (12) days' holiday with pay.

A maximum of twelve (12) days' pay may be earned but holidays taken must be taken within a period of two weeks.

2. With respect to causes beyond the control of the employee, the following shall apply:

(a) Where an employee is engaged in examination of the mine under Section 147 of the Alberta Mines Act, or Rule 37, Part XI of Coal Mines Regulation Act of British Columbia, he could be considered as not being absent from his employment.

(b) When an employee, being an officer of the Local Union or member of a Pit Committee under the Agreement, is, by arrangement with the management, absent from his regular employment for the purpose of discussing with the management, or with a Joint Committee constituted under the provisions of the Agreement, disputes arising under the Agreement, he shall be considered as not being absent from his employment.

(c) If a mine is idle on account of mine disability or lack of orders, employees shall be credited with this as a day worked providing they have not refused to perform work allotted to them. It should be here noted that this is also invariably not within the control of the employer and he is being penalized for a matter not within his control.

(d) Where employees work a short shift because of mine disability they will be counted as having worked a full day for holiday qualification purposes.

3. *Limitation regarding sickness and compensation.*

(a) In cases of legitimate illness certified by a doctor's certificate, a loss of not more than three days in any one calendar month would be considered as working time, and in compensation cases, a loss of not more than six days in any one month would be so considered.

(b) In the case of a man being off sick or on compensation for a lengthy period, as well as in cases where men are laid off work and subsequently rehired, this shall not be considered as having terminated his employment in calculating the twelve consecutive months of employment.

DECISION

I come to the conclusion that there is no patent (that is, no manifest) ambiguity in the relevant provisions of the agreement. It follows that parole evidence as to the negotiations leading up to the agreement is not admissible to interpret it.

Mr. Stubbs concedes that the words "That one day's holiday credit will be granted to any employee who has lost not more than one working day during the month", mean "lost except through the causes beyond his control set out in sections 2 and 3".

But he says the words "If any employee averages twenty working shifts per month", mean "actually works an average of twenty shifts per month" because he says this was a further concession to the Union and if the Union's interpretation is accepted it makes the preceding provision redundant. He vigorously protests against the employee's right to transfer days "counted as time worked" from one month to another by

including them to make up the 20 days average. I can well believe that he understood the provision to mean "actually works" but the difficulty with this interpretation is that the words are "averages twenty working shifts per month" and I can see no reason why the "days counted as time worked" do not apply to "averages twenty working shifts" since they admittedly apply to "any employee who has lost not more than one working day a month". In other words, time "counted as time worked" is working shifts as much as working days. Redundancy is apt to occur in agreements such as this which are built from year to year on former agreements with modifications.

In the result, my decision is that E. North, Charles Gillies and Gus Mattson are each entitled to six days' holiday credit for the period October 1, 1946, to March 31, 1947. If half the members of the committee agree with me this will then be the decision of the committee.

Wages, Hours and Working Conditions in the Pulp and Paper and Brewery Products Industries, 1946

THE information presented here, on the Pulp and Paper Products Industry and the Brewery Products Industry, was obtained in the general annual survey, 1946, of "Wage Rates and Hours of Labour in Canada."¹ The tables on wage rates contain comparative figures for 1945 which were obtained in the survey of that year.

Employers in these industries were asked to report, for the last pay period preceding October 1, their straight-time wage or salary rates or the average straight-time earnings for workers on piece work. Information was also obtained on certain other conditions of work² such as hours, overtime, vacations with pay, sick leave, Sunday work, and the numbers of workers under collective agreement in each

establishment. The total number of workers in each establishment, including both plant and office staffs, was also obtained.

In the tables on wage rates the averages shown are for selected representative occupations in each industry. They do not include the value of any allowances to employees such as free transportation, group insurance, sick benefits or other welfare plans. The predominant ranges of rates include approximately the middle 80 per cent of the workers in each occupation. The purpose of this is to exclude extremely high and extremely low rates and at the same time to show the ranges between which are included the great majority of the workers. The averages, however, include all the workers in the occupation.

The Pulp and Paper Industry

In 1946 the index of wage rates for the Pulp and Paper Industry was 48.7 per cent higher than in 1939 and 16.8 per cent higher than in 1945. The following index numbers for this group on the base of rates in 1939 as 100 give evidence of the steady rise in wages since the last year prior to the war:

<i>Year</i>	<i>Index</i>
1939	100.0
1940	104.6
1941	109.5
1942	115.1
1943	120.3
1944	125.7
1945	127.3
1946	148.7

As shown in Table I, returns from 88 establishments were included in compiling the data in the accompanying tables. In these establishments more than 40,000 workers were employed, plant and office, of whom less than 5 per cent were female. Eighty per cent of the workers were employed in Ontario and Quebec.

Slightly over one-half of the establishments employed fewer than 400 workers in each case, but these accounted for only 19 per cent of the total employment. The seven largest plants employing more than 1,000 workers in each include about one-fifth of the total number of workers covered in the survey. According to the latest available Dominion Bureau of Statistics Census of Industry report on the Pulp and Paper Industry, which is for 1945, the number of workers was about 40,000 in 109 establishments. Employment had increased substantially however during 1946.

More than 35,000 or 87 per cent of the total employees in the 88 establishments from which returns were analysed are covered by collective agreements. These are in effect in 73 establishments, thirty-four of which are in Quebec and 31 in Ontario. In these two provinces together are found four-fifths of the employees under agreement in the industry.

Table II shows wage rates for representative occupations in the industry in 1945 and 1946 in each of the four main divisions: Pulp, Newsprint, Paper Other than Newsprint, and Maintenance. In the other tables the information is by region for the industry as a whole.

The standard or normal 8-hour day and the 48-hour week were almost universal in the industry except in British Columbia where the plants which reported were on an 8-hour day and a 44-hour week. About 10 per cent of the workers in the industry were employed in those plants which reported the 44-hour week

¹ Comparable information on wages and hours in the Construction and Steam Railways industries for 1946 was published on page 890 of last month's *LABOUR GAZETTE*.

² Information on provincial legislation pertaining to annual vacations with pay, maximum hours of work and minimum wages is contained in an annual publication, *Provincial Labour Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages, and Workmen's Compensation*, by the Legislation Branch of the Department of Labour.

and about 88 per cent were employed in plants from which the 48-hour week was reported. In establishments in which the 8-hour day, 48-hour week obtains for the majority of workers, cases are sometimes found where one or more departments work a 9- or 10-hour day and a 54- or 60-hour week. A few small establishments report operations on the basis of a 60- or even 72-hour week, but these are exceptional cases. Standard or normal hours per week in the Pulp and Paper Industry weighted by the number of workers in each establishment averaged 47·7; the average was 48·0 in all provinces except Quebec and British Columbia with 48·2 and 44·0, respectively.

Many establishments report Sunday work, although it should be noted that some are reporting Sunday work for maintenance crews only. In general, the Pulp and Paper mills with collective agreements have clauses in their agreements stipulating that the regular operation will be six days per week with 24 hours shut-down on Sunday, excepting those departments required to operate the full seven days per week. Although the usual practice is to have a 24-hour shut-down on Sunday, production workers reported by some establishments on Sunday shift are engaged in departments requiring continuous operation.

Time and one-half for overtime was the predominant rate, more than two-thirds of the establishments having reported this provision for overtime work after standard daily hours; while for Sundays and holidays the proportion was considerably greater. Of the 88 establishments reporting, 83 showed this rate for overtime on Sunday and 79 for overtime on holidays.

As shown in Table III, about one in every six plants did not pay more than straight-time

rates for overtime after regular daily hours. No double-time rate was reported.

Vacations with pay are provided by nearly all establishments in the industry for most classes of employees. The initial period reported was one week after one year of service in 80 plants and in a few cases two weeks after one year of service. A few plants mostly in Quebec provided for paid vacations, usually about one-half day per month for less than one year of service. The maximum vacation did not exceed one week in about one-sixth of the plants regardless of the length of service, but in the remaining 72 plants, the maximum vacation was two weeks. The service requirement in these varied; one year in 3 plants; five years in 67; and in two others seven and ten years.

All but four of the establishments reported shift work. Eighty-three of the 88 which submitted returns reported three 8-hour shifts per day. In many of these, however, certain departments worked only two shifts per day. Very few indicated paying wage differentials for second and third shifts, possibly due to the fact that most of the work is rotative.

Of the 88 establishments analysed, 34 report some provision for sick leave with pay. Of these, 15 are in Quebec, 16 in Ontario and one in each of the provinces of Nova Scotia, Manitoba and British Columbia. Policy in some establishments permits sick leave with pay for a definite period after a stated length of service and in others there is no definite policy but the merits of each individual case are considered and length of sick leave with pay is at the discretion of management. Further, many establishments have sick benefit funds while others grant sick leave with pay to office or salaried employees only.

(1) In 4 plants vacation for less than one year of service is one half day per month.

(2) Vacation is one day for one year of service, 2 days for 2 years and one week for 3 to 6 years.

The Brewery Products Industry

Wage rates in the Brewery Products Industry were about 16 per cent higher in 1946 than in 1945 and slightly more than 48 per cent higher than in 1939. The index numbers for this industry based on rates in 1939 as 100 were as follows:

Year	Index
1939	100.0
1940	103.9
1941	113.3
1942	117.1
1943	121.9
1944	123.5
1945	127.9
1946	148.1

As shown in Table I, returns were obtained from 52 establishments in the industry in 1946. The Census of Industry Report of the Dominion Bureau of Statistics covers 60 establishments in this industry in Canada in 1945. These 52 reported a total of more than 7,500 employees, plant and office, of whom only about six per cent were female. More than two-thirds of the employees and about one-half of the establishments reporting were in Ontario and Quebec. Brewery establishments varied in size up to 800 employees, and over one-half the establishments employed between 50 and 150 workers each.

Thirty-nine of the establishments making returns reported having collective agreements

with their employees or with some organization representing them. Six were in the province of Quebec, 14 in Ontario, 13 in the Prairie Provinces and 6 in British Columbia. The number of employees covered by agreements in these plants was 5,796 in 1946.

Wage rates for selected occupations for 1945 and 1946 with ranges of rates for 1946 are shown in Table II.

Plant employees in 15 establishments in Ontario and the Prairie Provinces worked a standard or normal week of 40 hours with no work on Saturdays (Table III). Ten of these establishments were located in Ontario and 5 in Alberta. The total number of workers in this group comprised more than one-third of all the workers covered in this survey. The 44-hour week, which is usually 8 hours per day through the week with 4 hours on Saturday, is the most common standard in the industry although only 25 per cent of the workers are on this schedule. British Columbia, Saskatchewan and Manitoba have this length of week throughout the industry. The greater proportion of the workers are on a 48-hour week, although they are located in only 13 of the 52 establishments.

Average standard or normal hours per week in this industry weighted by numbers of employees are 45.2 for Canada as a whole. Regional averages are: Nova Scotia and New Brunswick, 47.5; Quebec, 47.9; Ontario, 43.6; Prairie Provinces, 42.7; and British Columbia, 44.0.

Sunday work is unusual in the industry, any reported being confined largely to the necessary maintenance and protective staffs.

Table IV summarizes the information reported by the 52 establishments on overtime rates. Payment in 1946 was at the rate of time and one-half in 30 of the plants paying overtime after daily hours. One-half of these were in the Prairie Provinces. Fourteen plants reported this same rate but only after weekly hours have been worked rather than after daily hours. Twenty-three reported time and one-half for overtime on Sunday while 12 had this provision for holiday work. Double time was reported for overtime on Sunday by 21 plants and for holiday work by 33. Six plants

reported straight-time rates for overtime from Monday to Friday, three did not pay any extra for overtime on Sunday and two for holiday work.

All but one of the 52 establishments making returns reported vacations with pay. The initial vacation reported was for one or two weeks in all cases, and the service requirement was one year or less in nearly all cases. In 30 plants the vacation was one week after one year while 12 granted two weeks after one year. Seven plants, all in Ontario, allowed one week after six months of service, and one in the Maritime Provinces granted two weeks after six months of service. In one plant the service requirement in order to qualify was not stated. In seven plants not more than one week was allowed regardless of the length of service while in 39 the maximum was two weeks. In the latter group the length of service was six months for one plant; one year for 22 plants, 13 of which were in Ontario and six in the Prairie Provinces; two years for 12 plants, 10 in the Prairie Provinces; five years for three plants; and 10 years for one plant. In five cases, all in the Province of Quebec, employees were allowed two weeks after 10 years although the maximum vacation was three weeks after 25 years of service.

There is very little shift work reported in the Brewery Products Industry other than that required for maintenance. During the period covered, two establishments worked three 8-hour shifts per day in one department, requiring a total of 149 men on the first shift and 45 on both the second and third shifts. Eleven establishments reported working a second shift in the bottling department, nine of which worked 8-hour shifts and employed a total of 431 and 279 men, respectively, on the two shifts. The other two establishments worked 10-hour shifts, requiring a total of 154 men on the first and 145 men on the second shift.

Of the twenty establishments reporting provision for sick leave with pay, one is situated in New Brunswick, four in Quebec, eleven in Ontario and four in the Prairie Provinces. More than 60 per cent of the establishments do not report any such provision.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. Because of limitation of space it is not possible to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Vegetable Foods

VILLE LA SALLE, P.Q.—STANDARD BRANDS LIMITED (YEAST DIVISION AND COFFEE AND TEA DIVISION) AND UNITED PACKING-HOUSE WORKERS OF AMERICA, LOCAL 225.

Agreement to be in effect from November 1, 1946, to November 30, 1947, and thereafter from year to year subject to notice. The Company recognizes the union as the sole and exclusive bargaining agency for all eligible employees. All present employees shall be members of the union in good standing. New employees must join the union at the expiration of fifteen days.

Hours of work: 8 per day and 44 hours per week to constitute the basic working day and week respectively. Overtime: time and one-half for work in excess of these hours and for all work on Sundays, double time for all work on 7 specified paid holidays. Vacation: one week with pay for employees with 12 consecutive months' service with the company, 2 weeks with pay for those with 2 years' service, 3 weeks with pay for those with 20 or more years' service. Employees with less than one year of service shall receive one-half day with pay for each complete month of service with the company. All female employees shall be allowed two 10-minute rest periods a day. All employees shall be given 10 minutes before the regular quitting time to wash and change clothes.

Hourly wage rates: Yeast Division—engineers \$1.25, firemen 97 cents, oilers 83 cents; yeast department 86 to 97 cents; machinist, electrician \$1.35, mechanic \$1.19, carpenter \$1.03, painter 92 cents, watchmen 75 cents; C and W Department 83 cents to \$1.25, females starting rate 53 cents, after 3 months 57 cents. Coffee and tea division—blending, roasting and bulk departments 76 to 89 cents, grinding department 76 to 82 cents, packaging department 76 cents, shipping department 76 to 95 cents, general plant 71 to 89 cents; bagging department females starting rate 53 cents, after 3 months 57 cents.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Rubber and Its Products

ST. JEROME, P.Q.—DOMINION RUBBER COMPANY LIMITED AND RUBBER WORKERS FEDERAL UNION, LOCAL 144.

Agreement to be in effect from December 2, 1946, to December 2, 1947, and thereafter subject to notice. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, April, 1946, p. 495 with the following changes.

Wages: a premium of 5 cents per hour shall be paid for all work performed between the hours of 7 p.m. and 6 a.m. regardless of whether the shift started before or after 7 p.m. Time and one-half overtime rate to apply only to the regular rate however. Vacation: employees to receive 2 weeks with pay after 5 years' service with the company instead of after 10 years as formerly.

Manufacturing: Metal Products

DUNDAS, ONT.—THE JOHN BERTRAM AND SONS CO. LTD. AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE 1740.

Agreement to be in effect from February 1, 1947, to January 31, 1948, and thereafter from year to year subject to notice. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE* for December, 1945, p. 1823, with the following changes.

Hours of work and overtime: 9 per day or night, Monday through Friday, a 45-hour week; time and one-half for work in excess of these hours; Christmas and New Year's Day, when such holidays fall on a normal working day, will be paid holidays for employees who work their regular full shift immediately preceding and their regular full shift immediately following the above two holidays. A night shift bonus of 5 cents per hour will be paid employees (with certain exceptions) who work the night shift.

Transportation: Water Transport

EAST AND WEST COAST.—CERTAIN SHIPPING COMPANIES AND CANADIAN SEAMEN'S UNION (FOR CANADIAN REGISTERED DEEP SEA DRY CARGO FREIGHT VESSELS).

Agreement to be in effect from October 15, 1946, to October 15, 1947. The companies recognize the union as the sole collective bargaining agency for all unlicensed personnel from time to time employed by the companies on all deep sea ships except those ships with a passenger certificate. The companies and the union agree that in the employment of unlicensed personnel there shall be no discrimination because of race, colour or creed. The

companies agree that all unlicensed personnel to be hired shall be requested from the office of the union through the National Employment Service and shall hire those despatched by the union, if acceptable.

Hours of work: deck department, engine department, in port—8 on week days, overtime rate for work after 5 p.m. and before 8 a.m. and on Saturday afternoons, Sundays and 6 specified holidays; at sea—3 watches of 8 hours each, overtime after 8 hours. Stewards department in port and at sea—8 hours in a spread of 12 hours. Men working on hatches, when long-shoremen are not involved, and when members of the deck department are required to take off or put on hatches or beams to prepare hatches for discharging or loading cargo, they shall be paid one hour's overtime when the vessel is in a bulk cargo trade, but with general cargo shall receive overtime at the regular rate for the watch on deck and time and one-half for the watch below. Carpenters in port required to take soundings after 5 p.m. or before 8 a.m., Saturday afternoons, Sundays and holidays shall be paid overtime for such work performed. Unless unforeseen circumstances interfere, all licensed personnel shall be given a reasonable time for meals. Fifteen minutes shall be allowed for coffee or tea at 10 a.m. and 3 p.m. Night lunches will be provided and an hour allowed for lunch time for any members of the crew working overtime all night.

When the company does not provide room and board, unlicensed personnel during the course of their employment shall receive 75 cents per meal. When men are required to sleep ashore, \$2 shall be allowed for room per night.

Monthly wage rates—bosun, donkeyman \$160, first cook \$180, carpenter \$165, second cook, second steward, able seamen, fireman \$150, oiler \$155, trimmer, wiper \$145, mess man \$140, ordinary seaman \$130, galley boy, deck boy (utility boy) mess boy \$120. When a vessel sails from port without a full complement of unlicensed personnel the wages of a missing crew member or members shall be divided amongst the seamen of the department concerned.

Overtime rates per hour—bosun, carpenter, donkeyman, first cook 80 cents, able seaman, oiler, fireman, wiper, trimmer, second cook, second steward, messman 70 cents, ordinary seaman, deck boy, galley boy, mess boy 60 cents.

Penalty cargoes—when members of the unlicensed personnel are required to clean holds in which penalty cargo has been carried, they shall be paid for such work, in addition to their regular wages, at the rate of straight overtime for the watch on deck, and overtime and one-half for the watch below. Vessels carrying explosives in 50-ton lots or over shall pay unlicensed personnel \$15 per month over regular wages. When members of the unlicensed personnel are required to work explosives, they shall be paid \$2.50 per hour extra.

Provision is made for cleanliness and equipment of seamen's quarters and standard of meals. Provision is also made for the settling of disputes.

EAST AND WEST COAST.—CERTAIN SHIPPING COMPANIES AND THE NATIONAL ASSOCIATION OF MARINE ENGINEERS OF CANADA INC.

Agreement to be in effect from October 15, 1946, to October 15, 1947, and thereafter from

year to year subject to notice. Companies agree to recognize the association as the sole representative for the purpose of collective bargaining for the engineer officers covered by the agreement. Preference of employment: the companies will recognize the association as the source of supply for its engineer officer personnel. In the event of the association being unable to furnish competent officers satisfactory to the companies when and where required, the companies shall have the right to obtain engineer officers elsewhere and such officers so obtained will not be discriminated against by the association. The association agrees that the companies shall have the right for just cause to reject engineer officers furnished by the association who are considered unsuitable or unsatisfactory for the position for which they are to be engaged.

Overtime: the second engineer shall be entitled to additional leave at the rate of 2½ days per month in lieu of all overtime worked. The third, fourth and fifth engineers shall be entitled to one day's additional leave for each 8 hours time worked in excess of 8 whilst vessel is in port and working cargo between 5 p.m. and 8 a.m. weekdays, Saturday afternoons, Sundays and 6 specified holidays. Such leave may be accumulated and added to annual leave or if declared on signing articles may be computed at daily rate of wages.

Vacation: Engineer officers shall be granted 21 days annual leave on pay after having completed one year's satisfactory service with the same company. *Pro rata* leave on pay may be granted before the expiring of 12 months provided mutually agreeable to both engineer officer and/or owner or master. Work on statutory holidays at sea shall be confined to that usually performed on Sundays. Work on statutory holidays when working cargo in port shall come under the overtime clause. Any officer required to be on duty on a statutory holiday when cargo is not being worked in port shall be entitled to the following 24 hours off duty. Where this is not possible the officer shall be entitled to one day's additional leave.

Monthly wages: 4,700 tonners—second engineers \$230 to \$250, third engineers \$200 to \$220, fourth engineer \$170 to \$190; 10,000 tonners—second engineers \$250 to \$270, third engineers \$220 to \$240, fourth engineers \$190 to \$210, fifth engineers \$180, plus \$10 per month increase after 3 years. Standby wages—for engineer officers not on articles their wages shall be those prescribed above for the grade and capacity in which they act. In addition a subsistence allowance of \$2.50 for meals and a room allowance of \$3 per diem shall be allowed if board and/or living quarters are not furnished.

Provision is made for seniority rights and settlement of disputes.

EAST AND WEST COAST.—CERTAIN SHIPPING COMPANIES AND THE CANADIAN MERCHANT SERVICE GUILD.

Agreement to be in effect from October 15, 1946, to October 15, 1947, and thereafter from year to year subject to notice. The companies recognize the Guild as the sole representative for the purpose of collective bargaining for the deck officers covered by the agreement. Preference of employment: the companies will recognize the Guild as the source of supply for its deck officer personnel. In the event of the Guild being unable to furnish competent officers satisfactory to the company when and

where required, the companies shall have the right to obtain officers elsewhere and such officers so obtained shall not be discriminated against by the Guild. The Guild agrees that the companies shall have the right for just cause to reject officers furnished by the Guild who are considered unsuitable or unsatisfactory for the positions for which they are intended.

Overtime: the chief officer shall be entitled to additional leave at the rate of 2½ days per month in lieu of all overtime worked. The second and third officers shall be entitled to one days additional leave for each 8 hours time worked in excess of 8 whilst vessel is in port and working cargo between 5 p.m. and 8 a.m. weekdays, Saturday afternoons, Sundays and 6 specified holidays. Such leave may be accumulated and added to annual leave or if declared on signing articles may be computed at daily rate of wage.

Vacation: no officer shall serve more than one year without being granted or taking annual leave unless mutually agreed. Deck officers shall be granted 21 days' annual leave on pay after having completed one year's satisfactory service with the same company. *Pro rata* leave on pay may be granted before expiry of 12 months provided mutually agreeable to both deck officer and/or owners or master. Work on statutory holidays at sea shall be confined to that usually performed on Sundays. Work on statutory holidays when working cargo in port shall come under the overtime clause. Any officer required to be on duty in port on a statutory holiday when cargo is not being worked in port shall be entitled to the following 24 hours off duty. Where this is not possible the officer shall be entitled to one day's additional leave.

Monthly wages effective October 15, 1946: 4,700 tonners, chief officer \$230 to \$250, second officer \$200 to \$220, third officer \$180; 10,000 tonners, chief officer \$250 to \$270, second officer \$220 to \$240, third officer \$200, plus \$10 per month increase after 3 years. Standby wages—

for officers not on articles the wages shall be as above, in addition subsistence allowance of \$2.50 for meals and a room allowance of \$3 per diem shall be allowed if board and/or living quarters are not furnished. Penalty cargoes—on vessels carrying explosives in 50-ton lots or over, the companies agree to pay deck officers, in addition to their regular monthly wages, \$15 per month while such cargo is on board the vessel.

Provision is made for seniority rights, passes and settling of disputes.

EAST AND WEST COAST.—CERTAIN SHIPPING COMPANIES AND THE MARINE DEPARTMENT OF THE CANADIAN COMMUNICATIONS ASSOCIATION.

Agreement to be in effect from October 15, 1946, to October 15, 1947, and thereafter from year to year subject to notice. The companies recognize the union as the sole collective bargaining agency for all radio officers employed by the companies. The companies also agree to hire all radio officers through the medium of the union. They may reject any officers deemed unsuitable provided such rejections are for valid reasons. If the union cannot furnish a suitable replacement with sufficient promptness to avoid delay in any scheduled sailing, the companies shall have the right to engage forthwith any other radio officer offering and wherever possible will notify the union.

Vacations: radio officers who have completed one year of continuous service shall receive a vacation of 2½ days per month with pay only. Vacations shall be cumulative, if mutually agreed upon, but in any event not in excess of 60 days.

Wages of radio officers covered by the agreement holding second class certificates shall be \$225 per month and for those holding first class certificates \$235 per month.

Provision is made for travelling, subsistence and room allowance and for grievance procedure.

Collective Agreement Act, Quebec

Recent Proceedings under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is admin-

istered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, p. 86. Proceedings under this act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the amendment of fifteen agreements and the correction of three of them. These include the amendment of the agreements for barbers and hairdressers at Quebec and at Three Rivers in the May 24 issue of the *Quebec Official Gazette*, for hairdressers at Montreal, retail stores at Quebec and the furniture industry for the province in the May 31 issue, the amendment of the agreements for the corrugated paper box industry for the province, building trades at Hull and tannery

employees for the province and the correction of the agreements covering plumbers at Three Rivers, barbers and hairdressers at Quebec and at Three Rivers in the June 7 issue, the amendment of the agreements for building trades at Chicoutimi and for barbers and hairdressers at St. Hyacinthe and at Sherbrooke in the June 14 issue. The other amendments are summarized below.

Requests for the amendment of the agreements for the millinery industry at Montreal, barbers and hairdressers at Chicoutimi, building trades at St. Jérôme, and tannery employees for the province and for new agreements for longshoremen (ocean navigation) at Montreal and for retail stores at Granby were gazetted May 31. Requests for the amendment of the agreements for the uncorrugated paper box industry for the province, for clerks and accountants at Jonquière, for retail stores at Chicoutimi and for building trades at Joliette, as well as requests for new agreements for shipliners and for checkers and coopers (ocean navigation) at Montreal, were gazetted June 7. A request for a new agreement for railway car and bus manufacturing at Montreal was published June 14.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing: Fur and Leather Products

FUR INDUSTRY, QUEBEC

An Order in Council, dated May 16, and gazetted May 24, amends the previous Orders in Council for this industry (L.G., Sept., 1943, p. 1253; May, 1944, p. 637; June, 1945, p. 873; Nov., 1946, p. 1583, Dec., p. 1772, and previous issues) by providing that the shop foreman earning \$50 or more per week shall not be entitled to a remuneration for overtime work. Female pattern makers now receive a minimum of \$47 per week instead of \$42. In order to be entitled to any of the specified holidays with pay, an employee must have worked every day of the week in which a holiday with pay falls, or have been absent only with the employer's permission or on account of illness, in which case a doctor's certificate may be required.

Vacation: an employee with less than 30 days' absence approved by his employer in the course of the year is entitled to the vacation with pay provided for in the agreement; an employee having more than 30 days' absence is entitled to a vacation with pay, the duration of which is based on the number of work weeks. However, the employer will not be required to give a vacation with pay to an employee who has been remunerated at the rate specified in the agreement for the authorized days of absences or when the absences not authorized by the employer are equivalent to the days of vacation to which the employee is entitled.

Construction

PLUMBERS, THREE RIVERS

An Order in Council, dated May 16, gazetted May 24, and corrected in the June 7 issue, amends the previous Orders in Council for this industry (L.G., March, 1940, p. 283; Aug., 1941, p. 1011; May, 1942, p. 631; April, 1944, p. 496; Jan., 1945, p. 69; Nov., p. 1679). Present agreement to remain in effect until January 1, 1948, and thereafter from year to year, subject to notice. The name of the contracting party of the first part is changed to "L'Association des Entrepreneurs de Plomberie de la cité et du district des Trois-Rivières". Territorial jurisdiction comprises the counties of Maskinongé, St. Maurice, Laviolette, Champlain and Three Rivers, and is divided as follows: zone I, all municipalities of 5,000 souls and more, as defined for the enforcement of the Pipe Mechanics' Act; zone II, that part of the territorial jurisdiction not included in zone I. However, in zone II operations costing more than \$10,000 (including wages and materials) shall be subject to the wage conditions for zone I. Pulp and paper industry is exempted from the provisions of the present agreement.

Hours: 8 per day, 4 on Saturday, a 44-hour week. However, 2 additional hours may be worked on the first 5 days of the week and one hour on Saturday, which shall be remunerated at the regular rate, provided not more than 55 hours are worked per week. All other overtime and all work on feast days shall be paid for at time and one-half with double time for Sundays. Travelling and boarding expenses of employees required to work outside of town are paid by employer. Travelling which may be terminated within one hour shall be done outside the regular hours of work. Wages are not to be paid for travelling done outside the regular working periods.

BUILDING TRADES, ST. HYACINTHE

An Order in Council, dated May 16, and gazetted May 24, amends the previous Orders in Council for this industry (L.G., Jan., 1943, p. 88, Feb., p. 220; Jan., 1944, p. 70; Jan., 1945, p. 70; Aug., 1946, p. 1094, Oct., n. 1446, Nov., p. 1585, and previous issues). The new wage is given in the accompanying table.

MINIMUM WAGE RATES FOR BUILDING TRADES, ST. HYACINTHE DISTRICT

Trades	Hourly rates Zones	
	I	II
Bricklayer, plasterer and mason.....	\$ 1.00	\$ 0.80
Stone cutter, job.....	1.00	0.80
Carpenter-joiner	0.85	0.65
Saw filer	0.85	0.65

* Rate of the apprentice.

For the municipalities of St. Hilaire, St. Hilaire-East and Otterburn Park, the minimum wage rates are 5 cents per hour less than zone I. Wage-earners doing cellar digging are to be paid by the hour—60 cents in zone I and 45 cents in zone II. Apprentices are to be paid from 40 cents per hour during first year to 60 cents during fourth year in zone I and from 30 cents during first year to 50 cents during fourth year in zone II. For maintenance work in zone I, tradesmen are to be paid a minimum of \$32 per week, labourers \$26 per week. Workers installing portable boilers and tanks are paid \$1.11 per hour, workers installing portable tanks under 2 tons in weight 78 cents per hour, workers installing stokers in furnaces with a horizontal heating surface of 20 feet or less 89 cents, helpers 67 cents; painters (structural iron) \$1 per hour, structural iron erectors and welders \$1.11, boiler maker, steam generator erector and engineman, welder \$1.11, helper 84 cents, apprentices (structural iron industry) 50 per cent of skilled worker's rate during first year and 85 per cent during second. One apprentice is allowed for every 5 structural iron workers employed on any job.

Another Order in Council, dated June 4, and gazetted June 14, amends the previous Orders in Council for this industry by including the parish of Douville in the territorial jurisdiction of zone I.

BUILDING TRADES, MONTREAL

An Order in Council, dated May 16, and gazetted May 24, amends the previous Orders in Council for this industry (L.G., Sept., 1946, p. 1252, Oct., p. 1447, Dec., p. 1774; March, 1947, p. 371, May, p. 690). This amendment applies to the elevator construction industry throughout the province.

Hours: 8 per day, Monday to Friday, a 40-hour week for the elevator construction, maintenance and repair industry. Overtime is payable at double time. Hourly wage rates for the elevator construction industry: mechanics \$1.23 per hour in the Montreal and Hull regions and \$1.17 in the Quebec region, helpers 86 cents in the Montreal and Hull regions and 82 cents in the Quebec region.

Film Visualizes Benefits of Labour-Management Committees

As an instrument for stimulating purposeful interest in Labour-Management Production Committees, the Industrial Production Co-operation Board of the Department of Labour has sponsored a sound filmstrip entitled "A Man with a Plan". It is the work of the National Film Board and depicts in the form of coloured animated cartoons benefits derived by industry from labour-management produc-

tion committees. The dialogue used avoids technical or statistical references, but in direct, idiomatic language emphasizes the advantages to be obtained by both management and labour from co-operative efforts.

The filmstrip which runs about twenty minutes, is available for showings to management and union groups through the offices of the Industrial Production Co-operation Board, Department of Labour, Ottawa.

Fair Wage Conditions in Dominion Government Contracts

THE Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from

the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During May

During the month of May the Department of Labour prepared, on request, 61 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into during this period by the various Government departments appear hereunder:—

(1) *Works of Construction, Remodelling, Repair and Demolition*

NOTE: The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "minimum rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation".

CANADIAN COMMERCIAL CORPORATION

Extension to Transmitting Building, Orleans, Ont. Name of contractors, Messrs. M. J. Sulpher and Sons Limited, Renfrew, Ont. Amount of contract, \$36,275. A fair wages schedule, dated December 9, 1946, in the terms following, was furnished for inclusion in the contract:—

Labour Law

Labour Legislation in British Columbia and Manitoba in 1947

IN both British Columbia and Manitoba legislation was passed dealing with labour relations. British Columbia passed a new Industrial Conciliation and Arbitration Act repealing the former statute of that name and replacing the Dominion Wartime Labour Relations Regulations (P.C. 1003) which were in force in the Province since 1944. In Manitoba, existing laws were amended to provide for a Manitoba Labour Board to enable the continuance in the Province of the Dominion Wartime Labour Relations Regulations, amended as necessary for their provincial administration, and also to provide that any labour relations legislation enacted by the Dominion may be applied by the

Province to employers whose undertakings are carried on in both Manitoba and an adjacent Province.

Changes were made, too, in British Columbia in Acts relating to minimum wages, factories, shops, annual holidays and boiler inspection. The Manitoba Legislature enacted a statute providing a week's holiday with pay for workers in most industries. Other amendments in Manitoba had to do with the early closing of shops, credit unions, old age and municipal pensions. The British Columbia legislative session opened on February 11 and closed on April 3. The Manitoba Legislature was in session from February 25 to April 26.

British Columbia

Collective Bargaining and Industrial Disputes

A new statute, the Industrial Conciliation and Arbitration Act, came into force on May 15, 1947. It repeals the Industrial Conciliation and Arbitration Act, 1937, and amendments, which had been suspended by the British Columbia Wartime Labour Relations Regulations Act, 1944, except as to proceedings already instituted under the 1937 Act and as to matters covered by that Act and not covered by the Dominion Wartime Labour Relations Regulations, 1944 (P.C. 1003). The 1944 British Columbia statute is repealed by the new Act of this session. The latter combines, with important modifications, provisions of the 1937 law and of the Dominion Wartime Labour Relations Regulations.

The Industrial Conciliation and Arbitration Act, 1947, provides machinery for the settlement of disputes of any kind between employers and employed; requires an employer to recognize and negotiate with the representatives of his workpeople, or, where there is a union, with the representatives of the union in which a majority of his employees or a majority of a certain class of his employees, are organized; safeguards the workers' right to organize; sets out the procedure for determining the proper bargaining agent, if any; requires a collective agreement to be observed by both parties and to

provide means of settling disputes arising out of it by agreement or arbitration; stipulates that certain practices on the part of employers or workpeople are "unfair" and punishable; and prohibits strikes and lockouts during the life of a collective agreement or, until the procedure for settling disputes has been complied with.

To assist in composing any differences, the Act provides for a conciliation officer, a tripartite conciliation board, or, if the parties so desire, a mediation committee formed by themselves, and, in certain cases, an industrial inquiry commission.

To determine questions concerning the bargaining authority, the Act authorizes the creation of a Labour Relations Board (British Columbia) by the Lieutenant-Governor in Council, to consist of a chairman and such number of other members as are considered desirable. The Board's constitution and powers follow closely those of the Dominion Wartime Labour Relations Board as laid down in P.C. 1003.

Some important changes were made in the Bill by the Legislature. Chief among these was the insertion of a clause declaring that no strike may legally take place until a Government-supervised secret ballot on the question of a strike has been held of all employees in the unit affected and a majority of the employees who vote have voted in

favour of a strike. A provision authorizing the Lieutenant-Governor in Council to exclude an employer or employee or any class of them from the Act was struck out. The penalty of \$10 a day for individual workers engaged in an illegal strike was removed and other fines were cut in half. Also struck out was a section dealing with the certification of the bargaining authority for a unit of employees in fish-processing and canning plants.

The Act applies to every employer who employs one or more than one person to do manual, clerical or technical work. "Employee" does not include a person employed in a confidential capacity or one who has authority to hire or fire, a person who acts on an employer's behalf in collective bargaining or in considering an employer's labour policy, an apprentice under the Apprenticeship Act, or a domestic servant, farm worker, hunter or trapper. The Bill as introduced excluded a person "who can effectively recommend the employment or discharge of employees" but these words were struck out by the Legislature.

The Act, like that of 1937, declares the rights of employees and employers to join and participate in the lawful activities of their organizations, including in the case of workers, trade unions. A trade union is again defined as an international, national or provincial employees' organization or a local branch chartered by and in good standing with such an organization. An employees' organization is an organization of employees, other than a trade union, that has as its object, or one of its objects, the regulating of relations between an employer or employers and his or their employees.

FREEDOM OF ASSOCIATION

To safeguard the worker's freedom of association certain provisions were enacted. These vary somewhat from similar clauses of the 1937 Act and from P.C. 1003.

No employer or person acting for him may refuse to employ or continue to employ or discriminate against any person in regard to employment or any condition of employment because of membership in a trade union or employees' organization; or impose any condition in a contract of employment seeking to restrain an employee from exercising his rights under the Act; or seek by intimidation, dismissal, threat, by imposing a penalty or by a promise or other means to compel or induce an employee to refrain from becoming or continuing to be a member of a trade union or employees' organization. The employer's right to suspend, transfer, lay off or discharge an employee for proper cause is, however, not to be affected.

No employer, employers' organization or person acting on its behalf may participate in or interfere with the formation or administration of a trade union or employees' organization or contribute financial support to it, provided that an employer may permit an employee or trade union representative to confer with him or to attend to the business of the organization during working hours without any deduction of wages. A union which the Board considers to be dominated or influenced by an employer so that it cannot properly represent employees in collective bargaining may not be certified under the Act as a bargaining agent, nor may an agreement made by it with an employer be deemed a collective agreement.

Freedom to join or not to join a union or a particular union is the concern of two clauses of the Act. No person may use coercion or intimidation to compel or induce anyone to become, refrain from becoming or to continue or to cease to be a member of a union or employees' organization, but it is expressly provided that the Act does not preclude parties to a collective agreement inserting in the agreement a provision requiring, as a condition of employment, membership in a specified union or employees' organization or granting a preference of employment to members of a specified union or employees' organization, or to preclude the carrying out of such provisions. The Act does not, therefore, prohibit a closed or union or preferential union shop.

A new feature of the Act is the provision for referring a complaint that an employer has committed an "unfair labour practice" in regard to the worker's right to union membership or activity to a Referee who is to be appointed by the Minister and given the same powers as a Conciliation Board to make an investigation. A Referee's report must be considered by the Minister before he consents to a prosecution for violation of these sections.

Except with the employer's consent, no union, employees' organization or person authorized by either may attempt at the employer's premises during working hours to persuade an employee to join or not to join the union or organization. The words "or not to join" were added by the Legislature.

The check-off of union dues is permitted only when the individual workers indicate their agreement. Each worker must authorize the deduction of the fee from his wages, and the employer must deduct the proper amount unless the assignment is revoked in writing. The dues deducted must be remitted to the union or employees' organization at least once

a month, together with a written statement of the employees' names and the deductions made. The Legislature added the stipulation that, if a worker revokes the assignment, the employer must give a copy of the revocation to the union. No employer is to be financially responsible for an employee's unpaid dues unless there are sufficient unpaid wages for that employee in the employer's hands.

CERTIFICATION

To facilitate the carrying out of the employer's obligation to negotiate with a trade union or employees' organization in which a majority of his employees are organized, the Act, like the Dominion Wartime Regulations, provides machinery for the determination of claims to represent the workers in collective bargaining and for certifying as the bargaining authority the union or the employees' representatives complying with the statutory requirements.

These provisions are new in British Columbia except as they appeared in the Dominion Wartime Regulations.

Where there is a question as to the right of a trade union or of bargaining representatives to represent the employees in a unit which is appropriate for collective bargaining, the Act provides means of determining the validity of the claim.

The Labour Relations Board (British Columbia) is to certify as the "bargaining authority", a trade union or the bargaining representatives having the support of a majority of the employees in such a unit. Application to be certified may be made where no collective agreement is in effect, if no bargaining authority has been certified or six months have passed since one was certified or the Board has consented to entertain an application before the expiration of six months, or, where there is a collective agreement, application may be made if ten months of its term have expired.

Workers employed by two or more employers who are members of one union may be represented by the union if it has as members a majority of the employees in a unit which is appropriate for bargaining, but the union can be certified only if all the employers consent and if the bargaining authority would be entitled to be certified for the employees of each employer if separate applications were made. Two or more trade unions claiming to have as members in good standing a majority of employees in an appropriate unit may make a joint application to be certified as a bargaining authority.

Where the majority of a group of employees of an employer are members of

a craft union, such union, if otherwise appropriate as a unit for collective bargaining, may apply to the Board to be certified as the bargaining agent of those employees, and, if the trade union so claims, they must be excluded from any other bargaining unit and not be counted as members of any other unit.

In determining whether a unit is appropriate for collective bargaining, the Board may include additional employees in, or exclude employees from, the unit.

Certification must be granted if the Board is satisfied (a) that the majority of the employees in a unit are members in good standing of a trade union, or (b) that as a result of a vote a majority have selected the trade union as their bargaining agent or have voted for bargaining representatives to be the bargaining authority on their behalf, but if the Board is not satisfied, it may reject the application and designate the time, not more than 90 days, that must elapse before a new application will be considered. This time-limit was inserted in the Bill by the Legislature.

To determine the merits of any application, the Board may make any examination of records and any inquiries it considers necessary, including the holding of hearings or the taking of votes, and may prescribe the nature of the evidence to be furnished in support of the application and the manner of making application.

No certificate may be granted to a trade union or to bargaining representatives, that, in the Board's opinion, are dominated or influenced by an employer so that their fitness to represent the workers in collective bargaining is impaired. Certification may be cancelled if, on investigation, the Board finds that the trade union has ceased to be a trade union or the employer has ceased to be the employer of the employees in the unit, but where a business is sold, the new owner is to be bound by the proceedings under the Act and the proceedings are to continue as if there had been no change.

A section dealing with certification of a bargaining authority for a unit of employees in the fishing industry, fish-processing plants, canneries and other seasonal operations was struck out by the Legislature. It provided that the Board might reject or hold in abeyance the application if, at the date of application, the number of employees was less than 60 per cent of the average for the previous 12 months.

On certification, a new bargaining authority is to replace immediately any other bargaining authority for the unit and is to have exclusive authority to bind it by a collective agreement. The certification of any

previously-certified authority is deemed to be revoked but any collective agreement to which the retiring bargaining authority was a party remains in force and is binding upon the newly-certified bargaining agent.

COLLECTIVE BARGAINING

When certified by the Board, the bargaining authority or the employer or employees' organization may, by notice, require the other party to begin negotiations. Where there is a collective agreement in force, either party may, within two months before the date of its expiry, give notice to the other to begin negotiations for its renewal or revision or for a new agreement. In either case, negotiations must begin within 10 days after notice is given.

Where, in either case, notice has been given, the employer is forbidden, except in the ordinary course of operation, to increase or reduce wages or to alter any condition of employment without the consent of the bargaining authority until a collective agreement has been concluded; or, if the negotiations break down, until a Conciliation Board has reported to the Minister and the report has been submitted to a separate vote of the employers and employees concerned and 14 days have elapsed after the result of the vote has been reported to the Minister. If both votes favour acceptance of the report, no lockout or strike may legally take place. The Minister may direct that these votes be by secret ballot and be supervised by some person appointed by him but this is not mandatory. For changing any wages or conditions of employment contrary to this provision, an employer or any person authorized by him, is subject to a maximum fine of \$10 a day for each employee whose conditions were changed.

CONCILIATION

If collective bargaining has continued unsuccessfully for 15 days or more, the Minister, on the written request of either or if he considers it advisable, may appoint a Conciliation Officer, who, within 14 days or any longer time allowed by the Minister, must report to the Minister setting out the points on which the parties agree and those, if any, on which there is disagreement. If they cannot agree, the Conciliation Officer is to state whether he considers it advisable to appoint a Conciliation Board.

Such a Board may be appointed by the Minister on the recommendation of a Conciliation Officer or on his own initiative.

Two members of the Board must be nominated by the parties to the dispute

within seven days of the Minister's notice to them and the Chairman by the two representative members within five days of their appointment. Where the various parties fail to make their nominations within the allotted time, the Minister may make the appointments without nomination.

The Board is allowed 14 days to report its findings and recommendations to the Minister but it may have longer time if the parties agree to an extension of the time or the Minister grants it. A Board's report is to be sent to the parties and may be published as the Minister sees fit.

The powers and duties of a Conciliation Board, like its constitution, are very similar to those of Conciliation Boards under the Dominion Wartime Labour Relations Regulations (P.C. 1003). Except for the time-limits, they are similar to those set out in the Industrial Disputes Investigation Act.

The British Columbia Act stipulates that members of the Legislative Assembly may act as members of Conciliation Boards and be paid for their services without being disqualified as members of the Legislature.

If, before or after a Board's report, the parties agree to be bound by its recommendations, the agreement submitted to the Minister is to be deemed to be a reference to arbitration, the Board to be an arbitral tribunal for the purposes of provincial law, and the decision of the Board to be an award.

The parties to a dispute may agree to set up a Mediation Committee of their own and if the Minister approves the reference of the dispute to such Committee, the latter is to be considered for all purposes of the Act, except payment of the Chairman's remuneration and expenses, to be a Conciliation Board.

In addition to these provisions to aid the parties in composing their differences, the Act gives to the Minister power to have inquiry made into any dispute, actual or threatened. Like the authority conferred on the Dominion Minister by an Order in Council of June 6, 1941 (P.C. 4020), is the power given the British Columbia Minister to refer such a matter to an Industrial Inquiry Commission of one or more members. The Commission must investigate and report within 14 days or such longer time as the Minister may permit and a copy of the report is to be sent to the parties. It will have similar powers to those of a Conciliation Board to summon witnesses and to enter and inspect premises.

COLLECTIVE AGREEMENTS

Collective agreements are to be for a term of one year, and may not be terminated within that time except with the consent of

the Labour Relations Board. There may be no strike or lockout during the life of an agreement and every agreement must contain a provision for final settlement of all differences concerning its interpretation, application, operation or any alleged violation. Where an agreement, whether entered into before or after the passing of the Act, does not contain such a provision the Board, on the application of any party, must prescribe it. Every person bound by a collective agreement must do everything he is required to do by the agreement and refrain from doing anything that he is required to refrain from by the agreement.

A copy of an agreement must be filed with the Minister by each party to it.

The names and addresses of the officers and a copy of the constitution and by-laws of a trade union, employees' organization or employers' organization which is a party to an application for certification or to an existing collective agreement may be required by the Board to be filed.

STRIKES AND LOCKOUTS

The Act sets out the conditions under which strikes and lockouts are illegal and establishes penalties for illegal work-stoppages.

Strikes and lockouts are prohibited: during the life of a collective agreement; until the conciliation proceedings have been carried out in connection with a dispute arising in the course of collective bargaining or after an agreement has expired or been terminated or in the case of any dispute arising under any other circumstances. Only after a Conciliation Board has been appointed and its report has been sent to the parties, and after a vote has been taken of the employees or employers concerned on the question of the acceptance or rejection of the report and, further, until a Government-supervised ballot has been held on the question of a strike or lockout and a majority of the employees or employers who vote have voted in favour of a strike or lockout, may a stoppage of work be legally brought about.

The requirement for a secret ballot of the employees and employers on the question of a strike or lockout under the supervision of an officer appointed by the Minister was added to the original Bill by the Legislature. The Bill as introduced merely provided that no stoppage might occur until 14 days after employees and employers had voted by secret ballot, under the Minister's supervision, on the findings of a Conciliation Board. No strike vote was required.

Another prohibition imposed by the Act is taken from the Dominion Wartime Labour

Relations Regulations. No union, employees' organization or person authorized by either may support, encourage, condone or engage in any activity which is intended to restrict or limit production, but this provision is not to apply to any act or thing required by a collective agreement for the safety or health of employees. For an offence under this section an individual is liable to a maximum fine of \$50, and a corporation, trade union, employees' organization or employers' organization to a maximum fine of \$125.

ENFORCEMENT AND PENALTIES

No prosecution for violation of the Act may be undertaken except with the Minister's written consent. Before giving his consent, the Minister may require the Labour Relations Board or a Conciliation Officer to investigate and report to him.

If in any legal proceedings a question arises which is within the scope of the Labour Relations Board's powers and it has not been decided by the Board, the Court must stay proceedings until the Board decides the question.

Penalties provided for offences under the Act, in addition to those already mentioned, are: for employers or their representatives who cause a lockout and trade unions or employees' organizations or their representatives who authorize or call a strike a maximum of \$125 a day in the case of employers and trade unions or employees' organizations and \$50 a day in the case of individuals. For refusal or failure to bargain collectively fines of \$25 for individuals and \$125 for corporations, trade unions, employees' or employers' organizations are to be levied. For attempting during working hours on the employer's premises to persuade a worker to join or not to join a union the maximum fine for individuals is \$50 and for corporations, trade unions, employees' organizations or employers' organizations, \$125. The same penalties are laid down for refusal or neglect to supply any information required or for refusal or failure to comply with a Board order. These penalties are half those provided in the Bill as introduced. For any act prohibited by the statute or for refusal or neglect to do anything required by it, the maximum penalties are \$50 for individuals and \$250 for corporations, trade unions or employers' organizations. Any officer or representative of an organization of employees or employers, a corporation or trade union who assented to the commission of an offence by the organization, corporation or union is a party to and guilty of the offence.

Wages

New sections were added to both the Male and Female Minimum Wage Acts stipulating that an employer who is required by the Board of Industrial Relations to pay to his employees the difference between the wages paid and the minimum wage and who is unable to find any employee to whom such difference is payable may pay the sum to the Board and so discharge himself of any further obligation. If the Board cannot find the employee within a month the money must be remitted to the Minister of Finance to be held in trust for the employee.

A similar section was added to the Semi-monthly Payment of Wages Act, 1939, which applies to mines, factories, shipyards, electrical plants, logging, construction and the fishing industry, providing, as above, for payment of such wages as are in arrears, according to the provisions of the Act, to the Board or to the Minister of Finance to be held in trust.

Sections of the Female Minimum Wage Act are struck out which limited the number of inexperienced workers over 18, other than apprentices, who hold special licences to one-seventh of the total number of employees in any establishment and restricting to 35 per cent of the total the aggregate number of such employees and of those under 18.

Factories

An amendment in the Factories Act permits factories to be exempted in writing by the inspector from the provision that employers must allow young girls and women not less than one hour at noon of each day for meals. As regards overcrowding, the Act has required the posting of notices specifying the number of workers allowed to work in each room; it now stipulates that not less than an average of 300 cubic feet of space must be provided for each worker in a room.

Repealed are sections of the Act dealing with hours of girls or women, permitting exemptions and requiring the keeping of a register of women employed. These are now covered by the Hours of Work Act. Other changes include those consequent on the Hours of Work Act and the Control of Employment of Children Act, 1944.

Shops

The Shops Regulation and Weekly Half-holiday Act has been amended by replacing "half-holiday" by "holiday".

Shops and stands for the sale of vegetables have been removed from the businesses exempt from the weekly holiday provisions and the section is repealed which prohibited

any worker being employed in a bake-shop, except with the inspector's written permission, on Sunday, or more than 12 hours in a day on more than 60 in a week.

The Act now permits a municipal council by by-law to set aside a whole day each week as a holiday for any class of shops during the whole or any part of each year. No occupier of a shop in that class may allow an employee to be in the shop on any part of such day. A repealed section of the Act provided for a weekly whole-day holiday on petition of not less than three-fourths of the licensed occupiers of any class or classes of shops within the municipality.

Another amendment allows a municipal council 60 days instead of one month before making an early closing by-law after receiving an application from at least three-fourths of the occupiers of any class of shops.

As amended in 1946, the Act stipulated that a by-law requiring the closing of garages, repair-shops or service-stations should permit as many of such places as are necessary for the accommodation of the public to remain open after the appointed closing hour, those remaining open to be nominated in writing by three-fourths of the occupiers of such workplaces, or, failing such nomination, appointed by the council. A new subsection stipulates that the Vancouver City Council in any such by-law must make the provision it considers necessary for the accommodation of the public with respect to service required after closing time.

When Christmas Day falls on a Thursday, Friday or Saturday, or when two or more of the public holidays enumerated in the Act, other than Christmas Day and the day following, occur in the same week, the provisions of the Act with respect to the closing of shops or a weekly holiday are not to apply.

New sections authorize the Government to make regulations requiring an employer to provide a rest-room for the women employed in the shop and to allow them to spend rest-periods there, at such times and of such duration as the regulations prescribe. The penalty for violation of such regulations is the same as for most other infractions of the Act, a fine of not less than \$20 and not more than \$50.

Holidays with Pay

"Working-year" in the Annual Holidays Act, 1946, the qualifying period, has been changed to not less than 250 days of actual work, instead of 280 days as originally provided. "Calendar year" is defined as "a period of one year, commencing on any day in the year"

and "working year" as "one calendar year's continuous service, comprising not less than two hundred and fifty days of actual work".

Holidays due or accruing due or their equivalent in wages under the Act are deemed to be wages payable to employees for work done. Another addition is a section identical with those inserted in the Minimum Wage Acts providing for unpaid holiday wages being held in trust by the Board of Industrial Relations for employees who cannot be located.

Boiler Inspection

A number of amendments were made in the Boiler Inspection Act.

"High-pressure heating plant", as defined in the Act, is a steam-plant in which no engine is used, in which the working-pressure exceeds 30 pounds per square inch, and the capacity of the steam-boiler does not exceed 50 h.p.

"Pressure-vessel" is now defined as any vessel or appliance with a cubic capacity of more than one and one-half cubic feet in which steam, gas, air or liquid is contained above 15 pounds pressure and which is used in an industry within the scope of Part I of the Workmen's Compensation Act.

With respect to the inspection of steam boilers during their construction, the fee continues to be 10 cents per h.p. but it is now stipulated that the minimum must be \$5. Another amendment makes it clear that the fee for inspection of a pressure-vessel when designed for a working pressure of 1,000 pounds is \$5 and where the working pressure is to be over 1,000 pounds and up to 2,000 pounds, \$10.

Changes were made with respect to the qualifications for engineers. A first-class engineer must be qualified to take charge of any power-plant; a second-class engineer, a steam-plant up to 900 h.p. and to act as second or assistant engineer of any steam-plant; third-class, a steam-plant up to 450 h.p. and, as assistant, up to 900 h.p., or to take charge of any low-pressure heating plant; and fourth-class, a steam-plant up to 100 h.p., as assistant up to 450 h.p., and a low-pressure heating plant up to 150 h.p. As before, an engineer with a temporary certificate must be qualified to take charge of the steam-plant mentioned in his certificate and no other. An engineer with a special certificate is authorized to take charge of a low-pressure heating-plant up to 75 h.p., a high-pressure heating plant up to 50 h.p., a logging donkey or other type of steam-plant which may be provided for in the regulations. Where two or more engineers are employed in any steam-plant, one must be designated as chief engineer, and the others

must work under his direction. No person without an engineer's certificate may fire or raise steam on any steam-boiler unless an engineer is present. An engineer in charge of a steam-plant or shift must not leave the plant for more than 15 minutes while it is operating, unless relieved by another engineer, or attend to other duties which will endanger the safety of the plant.

It is now provided that, in cases where an engineer's certificate is not granted, the candidate may again be examined on payment of half-fee. Previously, no further fee was required for a re-examination.

Higher qualifications are now required of a candidate for appointment as Inspector of Steam-boilers. He must (1) be a Canadian citizen and have resided in British Columbia for at least two years; and (2) have had four years' experience as a practical machinist and three years as engineer of a steam-plant of not less than 750 h.p.; or (3) have graduated in mechanical engineering from a university approved by the Board and have had two years' experience as engineer of a steam-plant of not less than 750 h.p., and in either case have passed a satisfactory examination. Previously, the Act required five years' practical experience or two years' experience and a degree in mechanical engineering.

Teachers

Amendments in the Public Schools Act, effective April 1, 1947, provide for compulsory membership of all British Columbia teachers in the British Columbia Teachers' Federation. Present and future teachers in the Province are required to be members of the Federation, but not required to join the organization are: (1) a teacher who notifies the general secretary of the Federation within six months after the passing of the Act of his desire to be excluded; or (2) a student enrolled in teacher training classes who notifies the general secretary within six months after being appointed as teacher of his desire to be excluded; or (3) a teacher on leave of absence by reason of illness, further study or service in the Armed Forces and who similarly notifies the Federation within six months after returning to classroom duties; or (4) a person teaching only in a night school. The executive committee of the Federation is given authority to suspend or expel any teacher from membership but any teacher so suspended or expelled may appeal from such decision of the Federation to the Council of Public Instruction.

Co-operatives

Amendments in the Co-operative Associations Act prohibit the use of "co-operative" or of any abbreviation of the word in the name of any corporation or firm other than that of an association under the Act; empower co-operative associations to subscribe to, become members of, co-operate with, or hold shares in, a credit union; provide penalties for breach of a co-operative marketing contract; and stipulate that any person who uses to catch fish a fishing vessel owned or controlled by another person engaged in the fishing industry is not bound by a co-operative marketing contract to sell or deliver such fish through an association.

Bill Not Passed

A Bill to amend the Trade-unions Act failed to pass. It would have prohibited an

application to a Court for an injunction in a labour dispute, except with the consent of the Minister.

Resolutions

A motion was agreed to on March 26 urging that a conference be held of all Provinces, or of the Provinces which have signed taxation agreements, for the purpose of implementing the social security measures presented to the Dominion-Provincial Conference in August, 1945.

The Legislature on April 3 defeated a resolution requesting the Dominion Government to amend the Old Age Pensions Act to remove the means test, to raise the maximum pension in line with increased living costs, and to reduce the age at which persons become eligible for pension to 65 for men and 60 for women.

Manitoba

Holidays with Pay

The Vacations with Pay Act, to be administered by the Manitoba Labour Board, is the first statutory provision for holidays with pay for workpeople in the Province. It provides for a week's holiday for employees in every industry, business, trade and occupation except farming, ranching and market gardening, and except railway and express companies under Dominion jurisdiction. The Act includes domestic workers in private homes but excludes independent contractors. It applies also to His Majesty in right of Manitoba and to every Government-appointed board, commission, association or similar body in the Province and to the University of Manitoba.

A worker becomes entitled to an annual paid holiday on completion of a year's service with an employer, and he must be permitted to take it within 10 months after qualifying. Not less than 95 per cent of the regular working hours during a continuous 12-month period constitutes a year's service, but not to be included are the holiday week and periods, not totalling more than 30 working days, consisting of authorized absences and time lost on account of illness certified by a medical practitioner.

If a public holiday occurs during the holiday week, one working day is to be added to the annual holiday.

The 12-month qualifying period is deemed to have begun on the latest of the following dates: (a) one year immediately before April 26, 1947, the date of the coming into force of the Act; (b) the date of entering employment with the employer; or (c) the

date on which a worker became entitled to an annual holiday under any Act, custom, agreement or under his contract of service.

Holiday pay must equal the wages that a worker would earn during the entire holiday week at the prevailing rate at the beginning of the holiday, and, where meals, lodging or an allowance in lieu of meals or lodging are provided as part of a worker's remuneration must include an amount equal to their money value for the week. The cash value of board, lodging or both is the amount actually deducted from wages of an employee by his employer, or, where no deduction is made, the amount agreed upon between employer and employee or stipulated in minimum wage regulations. Where a worker works on an incentive basis his holiday pay must be calculated on his average weekly production during the six months immediately before the beginning of his holiday.

Holiday wages must be paid not later than the day before the holiday begins, but if a worker who is paid semi-monthly or less frequently agrees, the employer may give him his holiday pay at the time of the regular payment of his wages. Repayment of any holiday pay by an employee is strictly forbidden.

If a worker leaves his employment after having worked at least 95 per cent of the regular working hours of the previous 11 months or more he is entitled to the holiday pay which would be due to him after completing a year's service.

Where a plant is shut down for a holiday period, an employer must give to workers not

yet entitled to a holiday an opportunity to earn wages, or a holiday of not more than one week, with or without pay, as may be prescribed in the regulations. Regulations may require the employer to file with the Board a report setting out what provision he proposes to make for such employees and empower the Board to approve the report or alter it as it deems reasonable. As introduced, the Bill provided that a worker who had less than a year's service should be given an opportunity to earn wages by doing maintenance, repair, clean-up or other work about the plant while it was closed.

The Act does not affect any more favourable conditions as to paid holidays laid down in any Act, agreement or contract of service or established by custom, but any less favourable provisions are invalid.

Questions as to whether holiday conditions are more or less favourable to employees, the date on which a worker is entitled to begin a holiday, holiday wages or the application of the Act to any person may be referred by either employer or employee to the Labour Board whose decision is to be final and binding on all persons concerned.

The Act requires every employer to whom the Act applies to keep a holiday book in which he must record any information which may be required by regulation. The holiday book may be incorporated with any other holiday or wages book required by any other Act of the Legislature.

The Minister or any person authorized by him may inspect the vacation record and require the employer to verify entries on oath and to furnish any necessary further information.

Penalties are provided for contravention or neglect of or failure to comply with the Act, regulations or any Board order, for making a false statement or for interfering with the Minister or his representative in the exercise of the powers conferred upon him by the Act or regulations. For a first offence the fine is not more than \$50 or, in default, imprisonment for not more than 10 days, and, for a subsequent offence, not less than \$25 or more than \$100 or, in default, imprisonment for not more than 30 days.

The Lieutenant-Governor in Council may make regulations as may be necessary for the carrying out of the Act.

Motions in the Legislature to provide for a two weeks' holiday after one year's employment and to provide for two weeks after two years' service were voted down.

War-time Labour Relations

The Manitoba War-time Labour Relations Regulations Act, 1944, which applied the Dominion Regulations (P.C. 1003) to industries in the Province which are ordinarily within provincial jurisdiction was amended by two new statutes. One authorizes the Lieutenant-Governor in Council to declare by proclamation that the regulations, as amended by the Act, shall be in effect from such date as may be fixed in the proclamation.

Another section of this amending Act, which is to come into force on proclamation, makes provision for payment to members of conciliation boards of such remuneration as may be fixed by the Lieutenant-Governor in Council and such out-of-pocket expenses as may be approved by the Comptroller-General.

This Act permits the Lieutenant-Governor in Council by proclamation to declare that any future Dominion Act or Order in Council dealing with labour relations shall apply to employers whose undertakings extend across the boundary between Manitoba and another province and the operations of which are carried on in both provinces.

This last provision relates particularly to the Hudson Bay Mining and Smelting Company whose premises are on the Manitoba-Saskatchewan boundary. A Bill to bring the Company's undertakings within Dominion law has received third reading, and will be noted in the next issue of the *LABOUR GAZETTE*.

Under the other Act the Minister of Labour for Manitoba, with the approval of the Lieutenant-Governor in Council, may enter into an agreement with the Dominion Minister of Labour for the administration of any Dominion Act or Order which has been declared by the Province to apply in place of P.C. 1003, insofar as such administration relates to matters or persons subject to the exclusive legislative jurisdiction of the Province.

Labour Relations

A new section has been added to the Department of Labour Act providing for the establishment of the Manitoba Labour Board which is to replace the Regional War-time Labour Relations Board. The new Board is to be equally representative of employers and workers and to consist of three or more members, of whom one is to be named as chairman. Each member is to hold office for the term fixed by the Lieutenant-Governor in Council. The Government may also appoint a person, who is not a member of the Board and who may be the registrar, to

act as vice-chairman. The latter while acting during the absence or illness of the chairman or for any other reason is to be a member of the Board.

Subject to the Lieutenant-Governor in Council's approval, the Board may make by-laws and rules for the conduct of its business. It is to hold regular meetings and may also meet at any special time on request of the Minister, at the call of the chairman or on the written request of two members addressed to the chairman. Other provisions set out further powers and duties of the Board and provide for the remuneration of its members.

Shops

Gasoline service stations were added to the classes of shops covered by the Shops Regulation Act. The shop-closing provisions of the Act are declared to apply and to have applied to Winnipeg and St. Boniface, and the provisions of the charters of those cities applicable to by-laws, including penalties which may be imposed, are to apply to by-laws passed under the Act. This enactment follows the decision of the Manitoba Court of Appeal that a Winnipeg by-law requiring the closing of service stations was *ultra vires*.

The amending Act authorizes a municipal council to enact a by-law providing a plan of closing whereby one or more service stations in the municipality, selected in rotation, or a certain class or classes of service stations as defined in the by-law, may remain open while all other service stations are required to be closed. This provision applies to any city, including Winnipeg and St. Boniface, and to any town, village, suburban municipality or municipal district, and to any rural municipality other than a suburban municipality which enters into an agreement with an adjacent city, town or village for the enactment of a uniform by-law. "Suburban municipality" is defined to include St. James, Fort Garry, St. Vital, East Kildonan and West Kildonan. Any city, town, village or suburban municipality may also enter into an agreement with any other adjoining city, town, village or rural municipality for a uniform by-law, and such by-law must not be amended or repealed during the term of the agreement except in accordance with the agreement or by unanimous consent of all parties.

A by-law requiring the closing of service stations must be made by a municipal council within a month after receiving an application signed by not less than three-fourths of the occupiers of the service stations in all the municipalities or parts of municipalities to which the agreement applies, whether or not the application is signed by three-fourths of the

occupiers in each municipality or part of a municipality. With respect to a rural municipality the by-law may be enacted only in cases of agreement with a neighbouring city, town or village. A by-law enacted by the council of a rural municipality may apply only to a part of the municipality.

Another amendment provides that the council of a rural municipality, incorporated village or town may by by-law require any class or classes of shops to be closed between 12 noon and 6 p.m. on one day a week, the day to be fixed in the by-law, during the whole or any part of the year. The Act previously declared Thursday to be the day of the weekly half-holiday.

Old Age Pensions

An amendment in the Old Age and Blind Persons' Pensions Act authorizes the Lieutenant-Governor in Council to make any orders necessary to put into effect any Dominion Old Age Pensions Act enacted in 1947 or any regulations or any agreement made under such legislation which provides for an increase in the maximum pension or for a change in the amount of a pensioner's allowable income.

Other sections, in force by proclamation on May 14, repeal certain amendments which were made to the Act in 1943. These provided for the payment of a supplementary allowance of \$1.25 per month to each resident pensioner who qualified for a pension in Manitoba. Also revoked are regulations under the Act, gazetted December 4, 1943, and effective from September 1, 1943 (L.G., 1944, p. 107) which related to the amount of pension payable under the agreement made between the Dominion Government and the Manitoba Government on September 1, 1943, providing for a wartime increase not exceeding \$5 a month in old age and blind pensions, and which laid down the conditions under which the supplementary allowance of \$1.25 a month was to be paid.

Credit Unions

An amendment in the Credit Unions Act, 1946, requires each union on filing its annual statement to pay a fee of such amount as may be set by the Lieutenant-Governor in Council, and for failure to file the return on time to pay a penalty of one dollar for each period of three months in default, beginning with March 1 in each year.

Miscellaneous

An amendment in the Public Schools Act stipulates that the School District of Winnipeg

No. 1 may by by-law provide for cumulative sick leave for its employees other than teachers, not in excess of cumulative sick leave granted by the City of Winnipeg to its employees.

The payment of pensions for municipal officials at 65 for men and 60 for women was provided for by an amendment in the Municipal Act. A Canadian Government annuity is to be provided for clerks, treasurers or secretary-treasurers, the cost to be borne jointly, but Winnipeg, St. Boniface and Brandon are excluded. A by-law may be passed to apply this pension plan to any other municipal officer or employee holding office on January 1, 1947, or appointed after that date.

The Brandon Charter was amended to provide for a contributory pension or super-annuation plan for city, parks board and public library employees, and to authorize the city to enter into housing agreements with Wartime Housing Limited.

A further amendment in the Municipal Act provides that "relief" does not include benefits under the Unemployment Insurance Act, 1940 (Canada) nor, as previously, hospitalization, mothers' allowances or pensions.

The Relief Debt Adjustment Act provides that, if the Dominion Government writes off or otherwise discharges part of the debt of the Government of Manitoba to the Dominion Government which was incurred for expenditures for unemployment relief, the Lieutenant-Governor in Council is to apportion among the various municipalities who have borrowed from the Manitoba Government for relief purposes one-half of the amount to be written off.

Amendments in the Highway Traffic Act repeal sections which were added in 1943. These provided that, for the duration of the war, boys of 14 and over might be licensed to drive farm trucks and high speed tractors and boys of 16 and over might be licensed as chauffeurs to drive motor vehicles other than public service vehicles and trucks with a carrying capacity of one ton. The previous minimum age of 16 in the former case and of 18 in the latter again apply.

The Garment Manufacturers' and Employees' Fund Act sets up a corporation, composed of employers who are members of the Garment Manufacturers' Association of Western Canada and Local 459 of the Amalgamated Clothing Workers of America representing their employees, to administer a fund to be used in cases of illness or death of workers or their dependents. Employees and workers are to contribute equal amounts.

Resolutions

A motion of March 13 to request the Government to have the Workmen's Compensation Act subjected to review and amendment in 1947 and at two-year intervals thereafter instead of the customary five-year periods was defeated by a vote of 37 to 17.

A resolution defeated on April 17 urged the Government to issue instructions to employers and employees affected by Manitoba law to continue the practice instituted by the Dominion Government under P.C. 2796 of April 24, 1945, of giving seven days' notice of separation from employment.

Several resolutions had to do with old age pensions. A motion was carried on April 24, requesting the Federal Government to amend the Old Age and Blind Persons' Pensions Act to provide the scale of pensions set out in its proposals at the Dominion-Provincial Conference in 1945, and to implement as soon as possible in the provinces which have entered into tax agreements with the Dominion Government such social security measures as were proposed at that time.

A defeated resolution requested the Federal Government to amend the Act to provide pensions of not less than \$50 a month at 65 without a means test, and free medical, dental, optical and hospital care, the entire cost to be paid from the Dominion Treasury. Another proposed amendment called for pensions of \$50 a month on the basis of the social security program proposed by the Dominion Government in 1945.

A resolution defeated on April 17 requested the Government to increase by \$10 a month old age and blind persons' pensions with a corresponding increase in the maximum income allowable until the Dominion Government should assume full responsibility for old age and blind pensioners.

The Legislature on April 24 voted down a motion urging an increase in mothers' allowances benefits in line with the increased cost of living, the raising of the eligible age to 16 and, in cases where the child is attending school, to 18, and the widening of the application of the Act, but agreed to the resolution, as amended, approving the present rate of benefits paid and requesting the Government to survey the situation as to the actual need of raising the eligible age to 16.

Bills Not Passed

A Private Member's Bill which would have limited hours of work of employees in "industrial undertakings" to eight in a day and 40 in a week failed to pass second reading. The Bill defined "industrial under-

taking" as every establishment and undertaking and all work in or about any industry; and any establishment, undertaking or work in or about any business, trade or occupation which may be prescribed by regulations.

A Bill, withdrawn after first reading, and similar to one introduced during the 1946 legislative session, would have prohibited discrimination on the ground of class, race, creed or ethnic origin against any class of person in the matter of employment,

membership in a trade union, or professional society, in respect to admission to educational institutions, and by hotels, theatres, etc. A second Bill presented by the same member, which also failed to pass, set out certain civil rights of every person and class of persons, including the right to obtain and retain employment, and provided penalties for acts of discrimination which interfered with those rights.

Recent Regulations under Provincial Legislation

AMONG the more important Orders described this month is one in Quebec permitting, on certain conditions, women and boys under 18 to be employed on a two or three-shift system. Revised minimum wage regulations in Saskatchewan do not materially change the weekly rates fixed in July, 1946, but make them applicable to the 44-hour work-week provided by the Hours of Work Act, 1947, and require payment of wages for eight public holidays.

Alberta Public Service Pension Act

By Order in Council of May 6, gazetted May 15, the Public Service Pension Act, 1947, which enacts new provisions relating to pensions for Government employees, was declared to apply to the members of the Alberta Workmen's Compensation Board and to persons employed by the Board otherwise than temporarily. The Act requires contributions from employees of five per cent of their salaries and by the Government of at least an equal amount.

The Workmen's Compensation Board instead of the Provincial Treasurer is to make the deduction from its employees' salaries and instead of a contribution from the Government the required amount is to be paid from the Accident Fund.

The Board is to determine questions as to whether any person is an employee, or regarding salary or pensionable service, but any other question as to the application of the Act is to be submitted to the Lieutenant-Governor in Council for final decision.

British Columbia Hours of Work Act

Working hours of persons employed on three Government road-building projects have been extended by three Orders (32, 32A and 32B) made by the Board of Industrial Relations on May 21 and gazetted May 22. The maximum hours permitted by the Act are eight and 44, but the Board may allow temporary exceptions in cases of exceptional

pressure of work. From May 22 to November 15, inclusive, workers employed on the Pine Pass Highway and the Hope-Princeton Highway may work nine hours in a day and 54 hours in a week, and on the Princeton-Kaleden Highway 10 hours in a day and 50 hours in a week.

British Columbia Male Minimum Wage Act

Male office workers in logging camps are declared exempt from the overtime provision of the minimum wage order covering logging, No. 1 (1947), which requires time and one-half the regular rate to be paid after eight hours in a day or 44 in a week (L.G., 1947, p. 198). The amending Order of May 21, gazetted and effective May 29, is to remain in force to December 31, 1947.

Ontario Adolescent School Attendance Act

Regulations of April 19, gazetted May 24, lay down rules for exempting children of 14 and 15 years of age from school attendance and granting them home permits or employment certificates. The Act does not require a child of these ages who resides in a rural district and whose services are needed in the home or on his parents' farm to attend school and such children do not have to obtain home permits or employment certificates.

An applicant for a home permit or an employment certificate must appear before his school attendance officer and submit an application in the form prescribed properly completed by his parent or guardian, evidence of age, and, for an employment certificate, a promise of employment in the form prescribed signed by his prospective employer. The school attendance officer must investigate carefully the home and employment conditions of the applicant and prepare a report in the prescribed form. Where the permit or certificate is granted, the officer must deliver it to the parent or employer, as the case may be, and notify the teacher or

principal of the school in which the adolescent is enrolled. He must also keep an employment record according to the form prescribed for every adolescent to whom he has granted a permit or certificate and report monthly to the school board and annually to the provincial School Attendance Officer the number of permits and certificates he has granted. The provincial Attendance Officer is to supervise the issue of permits and certificates. School inspectors must notify the attendance officer of any persistent non-compliance with the Act and, upon request, issue a card of legal discharge from school to the parent or guardian of any adolescent at least 16 years of age who has fulfilled the requirements for school attendance.

Ontario Minimum Wage Act

All female employees of companies owning or operating a telephone system, switchboard or exchange, except those serving fewer than 300 subscribers, are now covered by the new Minimum Wage Order applying to all women workers in the Province, except domestic servants (L.G., 1947, p. 697), which became effective June 1. The earlier telephone Order of November 1, 1935, was not rescinded when other Orders were revoked by the June 1 Order. By an amendment of June 2, gazetted June 21, the telephone Order was repealed and telephone workers placed under the general Order.

Ontario School Attendance Act

This Act requires a child under 14 to attend school but permits him to be absent for not more than six weeks in any school term if his services are required in husbandry or in urgent and necessary household duties or for the necessary maintenance of himself or of some person dependent upon him. Regulations, made on April 19 and gazetted May 31, set out the qualifications of school attendance officers, and the duties of appointing bodies, provincial school attendance officer, principals and inspectors; provide for employment certificates and prescribe the form of such certificates as well as of the reports and applications required by the Act.

Ontario Workmen's Compensation Act

New regulations under the above Act provide for the establishment of the Workmen's Compensation Board Superannuation Plan. The regulations, approved on April 17 and gazetted May 3, set out conditions for membership in the plan, provide for contributions to the Fund by the Board, its members and employees and prescribe the conditions under

which pensions are to be paid. Tables set out the annual contribution rates for new employees according to age and the percentage of pension payable at earlier than normal retirement-age.

Quebec Industrial and Commercial Establishments Act

Women and boys may now be employed on shift-work provided their daily hours do not exceed eight and do not extend beyond midnight.

The Regulations under this Act were amended by Order in Council of May 16, gazetted and effective May 24, to allow the Chief Inspector, at the employer's request, and under conditions the inspector may determine, to grant a permit for the operation of a two or three-shift system in an industry in which boys under 18 and women are employed. The Act permits these classes to be employed only on a single shift between 6 a.m. and 9 p.m. or on one of two shifts between 6 a.m. and 11 p.m. but it authorizes the Lieutenant-Governor in Council to exempt establishments from any of its provisions.

The permit must indicate the employer's name and address; the number of male and female workers on each shift, classified as to sex and age, from 14 to 16 and from 16 to 18; meal intervals and rest periods, if any; and any other working conditions the inspector considers necessary. A permit may be revoked and the conditions under which it was issued may be changed by order of the Minister.

Within three days after issuing a permit, the inspector must forward one copy to the Minister and two copies to the employer. The latter is required to sign and return one copy, thus making himself responsible for the information given and for the observance of the conditions under which the permit was granted.

For a meal at least 30 minutes must be allowed in each shift of five hours or more.

Before or after granting a permit, the Minister may, if he deems it advisable, have an industrial hygiene physician investigate conditions in any establishment with respect to hygiene, ventilation, lighting, temperature, humidity, dietetics, industrial fatigue and other matters, and on the basis of such enquiry an establishment may be classified as unhealthy, inconvenient or dangerous.

In industries which the Minister considers unhealthy, inconvenient or dangerous, on the advice of the hygienist, the Chief Inspector may require one or two rest periods, of such length of time as he may fix, apart from the meal period.

Order in Council No. 1640 of May 10, 1946 (L.G., 1946, p. 1649), is rescinded which permitted the Minister to set the time to be allowed for meals when work was arranged in shifts.

Quebec Minimum Wage Act

Two more minimum wage Orders (Nos. 22 and 34) governing bricks and building blocks manufacturing and ice industry and trading in Quebec city and district have been repealed by an Order in Council of June 11, gazetted June 21.

Saskatchewan Hospitalization Act

As a result of a 1947 amendment empowering the Lieutenant-Governor in Council to reduce for any class of persons the six-months residence requirement under the above Act, the regulations have been amended by an Order in Council approved on April 22 and gazetted May 3. Conditions are now laid down under which are eligible for benefits persons temporarily residing outside the Province or moving from an area in the Province where they are exempt from taxation and benefits under the Act to an area in which they are payable.

Saskatchewan Minimum Wage Act

Revised minimum wage Orders, effective June 30, reproduce, in the main, the minimum weekly rates put in effect on July 22, 1946 (L.G., 1946, p. 995), but make them applicable to a 44-hour week instead of a 48-hour week in cities and in factories, shops and offices in smaller towns and villages. Workers must be paid for eight public holidays and if they are required to work on such days, they must be paid their regular wages plus time and one-half the regular rate. Slight increases are made in rates for janitors and caretakers and for persons, such as long-distance truckers, who in the course of their duties travel between two or more cities, towns or villages which are at least 10 miles apart. Employees of hospitals, nursing homes and educational institutions who were previously included in the Order covering hotels and restaurants have now been given a special Order. Other revisions are consequent on the Hours of Work Act, 1947, which becomes effective July 1 and which limits working hours to 44 in a week with time and one-half for overtime in cities, in all factories in the Province, and in offices and shops in any part of Saskatchewan to which the Minimum Wage Act applies.

The Orders were made by the Minimum Wage Board on May 20, approved by Order

in Council on May 23, and gazetted June 14. All earlier Orders (1 to 8) are rescinded.

PUBLIC HOLIDAYS

Specific authority to make Orders fixing the minimum wage to be paid for public holidays was given the Minimum Wage Board at the recent session of the Legislature, following a Regina Magistrate's decision that the Board had no power to require payment for public holidays when no work was done.

On July 22, 1946, payment was first required for public holidays but the stipulation was that a worker who had been employed by the employer for at least six months was to be paid for work done on a holiday or part of a holiday at the regular rate increased in the proportion which the hours worked on the holiday bore to the normal work-week. The holidays were New Year's Day, Good Friday, May 24, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day, together with any civic holiday and a weekly half-holiday prescribed by statute or civic by-law.

Employees who work 32 hours or more in a week containing a public holiday in all workplaces in cities, in factories, shops and offices in towns and villages (36 hours or more in other workplaces in the eight larger towns and in the 49 smaller places listed in the Orders) must be paid for the holiday one day's wages at the regular rate whether they work or not. Remembrance Day has been added to the seven holidays listed above but local holidays have been dropped. For work on a holiday a full day's wages and, in addition, one and one-half times the day's wages must be paid for all time worked by employees, with the exception of those in hotels and restaurants and in hospitals, nursing homes or educational institutions. The latter classes, in addition to one day's wages must, as before, be given regular pay for every hour or part of an hour worked, or be granted, without reduction of wages, equivalent time off within four weeks after the holiday.

Employees who work less than 32 hours in a week or less than 36, as the case may be, must be paid for the holiday the same proportion of a day's wages as the number of hours worked bears to 32 or 36, and are subject to the same provisions as the above with regard to work done on a holiday.

NEW ORDERS

Instead of eight Orders, as before, there are now 16, divided into three main groups, three covering cities and the area within a five-mile radius; four applying to eight

larger towns, Canora, Estevan, Humboldt, Kamsack, Lloydminster, Melville, Shaunavon and Wynyard and their vicinity; and four covering 49 smaller towns and villages and a five-mile radius. Previously, cities and the eight larger towns were grouped together.

The city Orders are:—

(1) General, including factories; (2) Hotels and restaurants; and (3) Hospitals, nursing homes and educational institutions.

Orders covering the larger towns are:—

(4) Factories, shops and offices; (5) Miscellaneous; (6) Hotels and restaurants; (7) Hospitals, nursing homes and educational institutions.

The Orders for smaller towns and villages are:—

(8) Factories, shops and offices; (9) Miscellaneous; (10) Hotels and restaurants; (11) Hospitals, nursing homes and educational institutions.

The minimum rates fixed on July 22, 1946, remain in effect for all these workplaces. Other Orders govern amusement places, long-distance truckers, janitors and caretakers, lumbering and summer resorts. Changes in these are noted below.

For part-time workers employed to operate horse-drawn or motor vehicles, a new section in the general Orders and those dealing with factories, shops and offices fixes a minimum of at least 60 cents an hour.

HOTELS, RESTAURANTS AND HOSPITALS

In the new hotels and restaurants Orders and in the three hospital Orders, which exclude registered nurses, it is provided that a female who does not reside on the premises must not begin or finish work between 12.30 a.m. and 5 a.m., instead of between 12 midnight and 5 a.m., as formerly, and that workers must be allowed at least half an hour, exclusive of working hours, for meals eaten on the premises and one hour for meals not consumed on the premises.

LONG DISTANCE TRUCKERS

A new Order (No. 13) provides a minimum of 60 cents an hour for any employee who regularly travels in the course of his duties to two or more cities, towns or villages at least 10 miles apart. Previously, the general orders applied to any worker whose duties required him to travel in or through or within a radius of five miles of any city, town or village of over 500 population, and these provided a minimum of \$18.50 and \$16 for full-time workers and 50 cents an hour and 40 cents an hour for part-time workers, according to the size of towns.

JANITORS AND CARETAKERS

Order 14 governs janitors and caretakers in one or more buildings used exclusively for residential, office or commercial purposes in any city or town of over 500 population and within a five-mile radius.

The new minimum for these workers working full time, that is 48 hours or more, is \$24 a week. The former rate was \$18.50 for more than 36 hours in a week.

For part-time workers, the rate remains the same, not less than 50 cents an hour, but this applies to workers employed for less than 48 hours a week instead of less than 36 hours. The new Order, unlike the earlier one, does not include charwomen.

SUMMER RESORTS

The only change made in this Order (No. 16), which applies from June 15 to September 15 inclusive in each year, was to relate it to five instead of seven summer resorts. These are Carlyle Lake, Kenossee Lake, Katepwe, Regina Beach and Waskesiu.

HOURS OF WORK AND OVERTIME

Orders 1-11 inclusive provide for payment of time and one-half for overtime but "overtime" is defined differently.

In the rescinded Orders minimum rates applied to "the normal work-week" which was defined as 48 hours or the number of hours customarily worked in an establishment in a week, if less than 48. For work beyond the normal work-week, time and one-half the regular rate was required to be paid to any worker earning not more than \$35 weekly in the cities and larger towns and to workers paid \$30 or less in a week in smaller towns and villages.

The new Orders covering all workplaces in cities and the two Orders applying to factories, shops and offices in towns and villages define "full-time employee" as a worker whose weekly hours are not less than 36 nor more than 44, and a "part-time employee" as one working less than 36 hours. In these Orders "overtime" is time worked beyond eight hours in a day or 44 hours in a week, except for a week which contains a public holiday in which case overtime is time worked beyond 36 hours. The proviso is added, however, that the Lieutenant-Governor in Council may exempt any industry or undertaking from the Act for such period of time or season of the year as may be necessary or expedient. It is also stipulated that time and one-half is not payable where in order to have a five-day week, work consists of nine hours in a day but not more than 44 in a week, or where shift-workers work more than eight hours in

a day or 44 in a week but over such period of weeks as may be prescribed by the Minister not more than an average of eight or 44.

The Orders applying to hotels, restaurants, hospitals, etc., and other workplaces in towns and villages stipulate that "full-time employees" are those working not less than 37 nor more than 48 hours, and "part-time employees" as those working less than 37 hours in a week. In these Orders, overtime

is time worked beyond 48 hours, or in a week containing a public holiday, beyond 40 hours.

There is no provision for overtime pay for truckers, janitors or caretakers, lumber workers or persons employed in summer resorts, but workers in cities in bowling alleys, billiards halls, skating or curling rinks, dance-halls, theatres, shooting galleries, etc., must now be paid time and one-half for work done beyond eight hours in a day or 44 in a week.

Legal Decisions Affecting Labour

British Columbia Worker Wrongfully Dismissed Cannot Collect Damages for Time Off Work If He Seeks No Other Job

A TEST case to determine the legal position of a man who had been dismissed for being absent with leave was decided by Mr. Justice Coady of the Supreme Court of British Columbia on April 21. Injured in an accident during employment and consequently off the job for some time, the man suffered another accident at home during that period and remained off work without notifying his employer of the reason for his failure to return when expected. On his recovery, he was prevented from returning to the job by a strike which lasted for over a month. When he presented himself for employment at the end of the strike he was told that he had been dismissed.

The Court, while agreeing that the plaintiff had been wrongfully dismissed, considered that the only damages to which he was entitled were the equivalent of one week's wages, amounting to \$51.52.

In accordance with the collective agreement between the local of the International Woodworkers of America and the defendant company, the question of the man's dismissal was referred to arbitration. The Arbitration Board found the dismissal wrongful and recommended the plaintiff's reinstatement. This was done. The plaintiff, however, brought action for damages, claiming the amount he would have earned had he been in the defendant's employ from June 21, the day after the strike, until September 26, the day he was reinstated. He had made no effort during this period to seek other employment.

Mr. Justice Coady did not agree with the defendant's contention that all matters in dispute between it and its employees were to be determined by the Arbitration Board and the plaintiff having sought and obtained his remedy before that Board, it was not open

to him then to come to the Court seeking damages for wrongful dismissal. Mr. Justice Coady pointed out that the only question referred to the Board was whether or not the dismissal was wrongful. The Arbitration Board found that it was wrongful, and added the recommendation for reinstatement which was accepted by the Company. He continued:—

The determination of such other legal rights as accrued to either party incidental to, or following upon the dismissal was not before the Arbitration Board for consideration. The Board was not dealing with, and did not presume to deal with any claim for damages to which the Plaintiff might be entitled as a matter of law should the Board decide that the dismissal was wrongful.

Concerning the question as to whether the plaintiff should have sought other employment in order to minimize his loss, the Company contended that it was his duty to do so, and since he had not done so, he was entitled only to nominal damages. In reply, the plaintiff argued that it would have prejudiced his position if he had taken another job pending the hearing before the Arbitration Board, and, further, that it was unreasonable to expect him to seek other employment since, before getting a permit to seek employment, he would have had to obtain his Unemployment Insurance card and notice of separation from the defendant and return these to the Unemployment Insurance Office. Moreover, he argued that his seniority rights after four years of service would have been affected if he had taken another job.

Mr. Justice Coady disagreed with this argument. He considered that the plaintiff should have taken the necessary steps to obtain a permit to seek other employment and have taken such employment temporarily until the arbitration decision was handed down. There was evidence that similar employment was available to the plaintiff in other mills working under agreement with the local union.

"The law in this matter", the Court stated, "is well settled". The plaintiff was entitled only to one week's wages.—*Hnatnicky v. Pacific Pine Company Limited*, Supreme Court of British Columbia, April 21, 1947.

Vancouver Early Closing By-Law Invalid under Shops Act

A Vancouver City by-law to provide for the early closing of shops, including automobile garages, automobile service and repair shops and gasoline service stations, was quashed by the Supreme Court of British Columbia on May 28 on the ground that it did not comply with the statutory requirements for such by-laws.

Application was made to the Court by way of *certiorari* to quash the by-law after an operator of a service station had been convicted of violating the by-law by keeping open for the sale of gasoline between 7 p.m. and 7 a.m. on June 14, 1946. It was argued that the by-law was *ultra vires* of the city.

The by-law was made under the Shops Regulation and Weekly Half Holiday Act, 1943. A clause of the Act stipulates that in every by-law, passed under the authority of the section, requiring the closing of automobile garages, service or repair shops or gasoline service stations, the City Council shall make provision for the accommodation of the public "in respect of any service immediately required by any person thereat after the hour for closing appointed by the by-law". The by-law, however, required every such place of business to be closed between 7 p.m. and 7 a.m. on the following day unless the Licence Inspector granted to "the owner or occupier of any completely licensed storage garage having a minimum capacity of 25 cars wherein the business of retailing to the public is carried on, a separate permit to remain open for the sale of gasoline. . . ."

Chief Justice Farris considered that the Act did not contemplate that any garages or service stations should be allowed to operate in an unlimited manner for 24 hours in a day but merely that such places should be free to give "service immediately required by any person thereat" whether gasoline or emergency repairs. Moreover, he considered the by-law discriminatory.

The Shops Regulation and Weekly Half Holiday Act was amended in 1946 to replace the section referred to above by one stipulating that a by-law requiring the closing of garages and service stations shall provide that as many of such places as the Council deems necessary for the accommodation of the public may remain open after the ordinary hour of closing and that the places permitted to

remain open may be nominated in writing by not less than three-quarters of the occupiers of such places of business. Failing such nomination, the City Council may name the places permitted to remain open. In 1947 the section was amended further to require a Vancouver by-law to make such provision for the accommodation of the public after the normal closing time as it considers necessary. —*In re Caddell 2* (1947) *Western Weekly Reports* 40.

Early Closing By-Law under Manitoba Shops Act Cannot Apply to Winnipeg

A Winnipeg City by-law made under the Shops Regulation Act, which required closing of gasoline service stations at certain hours, was declared *ultra vires* by the Manitoba Court of Appeal on May 12 on the ground that the part of the Act providing for early closing by-laws does not apply to Winnipeg. Chief Justice McPherson dissented.

Under the by-law of July 30, 1945, purporting to be made under the authority of the Manitoba Shops Regulation Act, service stations were required to be closed from Monday to Friday of each week at 7 p.m., on Saturday at 9 p.m. and on Sunday at noon. Provision was made for allowing them to close on Wednesday at noon instead of Sunday on certain conditions. A service station operator was convicted on November 7, 1946, for keeping his business open on Saturday after 9 p.m. The Magistrate, however, prepared a stated case for the Appeal Court.

The fourth question submitted in the amended stated case, is the by-law *ultra vires* and void in whole or in part, the Court of Appeal answered in the affirmative. Being of this opinion, the majority of the Court considered it unnecessary to answer the first three questions. Chief Justice McPherson, believing the by-law *intra vires*, replied to the other questions that, in his opinion, the business of the accused was a service station within the meaning of the by-law, that a "service station" was a "shop" within the meaning of the Shops Regulation Act, and that, subject to some modification as to form, the City had power under the Shops Regulation Act to make the classification of businesses as in the by-law and that in so doing it did not discriminate between persons in the same class.

The difference of opinion in the Court arose from a clause in the Shops Regulation Act which states that, subject to certain provisions, a by-law passed by a municipal council under the authority of the Shops Regulation Act shall

for all purposes whatsoever be deemed and taken to have been passed under and by authority of the Municipal Act and as if the preceding sections of this Act had formed part of the Municipal Act, and the preceding sections of this Act and the Municipal Act shall be read and construed together as if forming one Act.

This provision, together with a change made in 1902 in the Municipal Act to stipulate that the expressions "Municipality" and "City" in that Act did not include the City of Winnipeg, and the enactment in 1902 of the Winnipeg Charter which came into force ten months before the revised Municipal Act, led the majority of the Court to hold that the Shops Regulation Act, being part of the Municipal Act as it stood before its revision, applied to Winnipeg up to March, 1903, when the revised Municipal Act, which did not apply to Winnipeg, came into force.

It was the opinion of the majority that the legal effect of the provision of the Shops

Regulation Act quoted above was to incorporate those provisions of the Shops Regulation Act in the Municipal Act where they applied only to the municipalities governed by the Municipal Act. They would, therefore, not apply to the City of Winnipeg.

Chief Justice McPherson considered that the Shops Regulation Act is a statute in itself which is still in existence and that under its terms it is applicable to municipalities other than those governed by the Municipal Act.

It may be added that a 1947 amendment to the Shops Regulation Act brings service stations in Winnipeg within the Act so as to enable a by-law to be made for the closing of such places of business in accordance with a plan set out in the by-law providing for a rotation system or for some classes of service stations to remain open for business during the hours others are required to be closed.—*Rex v. Hoot*, 1 (1947) Western Weekly Reports 961.

Progress of Vocational Training

THE number of new trainees enrolled during the month of May, 1947, in all branches of Canadian Vocational Training was 1,785 (1,641 men, 144 women). The number under training at the end of May, 1947, was 26,910 (24,653 men, 2,257 women). The breakdown in the different types of training may be studied from the accompanying table.

New veterans enrolled for training in the following classes:—

Course	Men	Women
Training-on-the-Job	697	11
Correspondence	45	2
Pre-Matriculation	73	7
Private Schools	140	70
Canadian Vocational Training Schools	686	54

There has been a steady decrease in the numbers "enrolled" and "under training" in pre-matriculation courses. It is anticipated that by the end of September, the number of veterans taking training under this heading will possibly be confined to one Training Centre in each Province. The training that will be given after September will be mostly on a pre-vocational basis, that is, training to increase the academic status necessary for certain vocational trades. There will also probably be a limited group of veterans whose training has been delayed by disability, hospitalization, or for special personal reasons.

The numbers taking Training-on-the-Job have been fairly well maintained since August, 1946. The co-operation and interest of industrial managers in this type of training has been commendable.

Training in Schools has shown a continuous decline since January. The backlog for May has decreased approximately 200, as compared with that for April, 1947. A year ago, the number awaiting training was 5,528; by the end of May, 1947, it had fallen to 605. The following five trades received over 400 of this total: barbering 174; hotel trades, 56; brick-laying, 33; watch repair 146; graphic arts 38.

Contraction of training facilities has presented a problem co-incidental with the steady decrease in enrolments. While Regional Directors have been given discretionary authority to consolidate certain classes, the decision to close a whole training centre can be made only by the Committee for Closing CVT Schools at Ottawa. Presentations are to be made to this Committee by the Regional Directors, if from an economical

point of view, enrolment does not warrant keeping open a Training Centre.

To date, this Committee has held several meetings and has made certain tentative and finalized arrangements for closing CVT Schools. According to the reports of this Committee, it is felt that most of the CVT Schools for veterans will be closed by the end of October. However, provision is made under special arrangements with the Provincial Governments for priority in training for veterans in the regular municipal or provincial schools.

Women's Training

The survey at the end of May showed that 9,820 women have taken training under the Canadian Vocational Training program, and that over 2,200 were still in training. The most popular fields of training for women veterans continue to be commercial, pre-matriculation, dressmaking, hairdressing, and the auxiliary to nursing. It is very interesting to note the progress that has been made in the subsidiary group for nursing. The following summary, based on a recent survey by provinces, indicates the current position of training for auxiliary nursing services.

Maritimes.—For the Maritime provinces a basic training centre was established at Moncton in July, 1946, to provide three months' "basic" and six months' "hospital training" for "practical nurses". The provincial civil service has set a salary scale for practical nurses for the tuberculosis hospital at Moncton, New Brunswick. In Nova Scotia legislation is pending. The total enrolment was 33, all of whom were war veterans.

Quebec.—Courses for "trained attendants" were arranged in Quebec province in January, 1946. These provided for three months' "basic" and six months' "supervision". Much of the training was given in private schools licensed under provincial charter. CVT gave its approval to the Parker school at Montreal. Legislation in Quebec has not been finalized. There has been a total enrolment of 44, all of whom completed the training.

Ontario.—In Ontario, three months' "basic" and nine months' "hospital" training was provided at Toronto for "nurses' assistants", from February to September, 1946, under the CVT program, and subsequently under the provincial Department of Health. Legislation is pending to licence "nurses' assistants" under the Nurses Act. The total enrolment has been 176, of whom 48 were veterans and

128 were civilians. Sixteen veterans and 18 civilians did not complete their training.

Manitoba.—Manitoba provided three months' "basic" and nine months' "hospital" training, for "practical nurses", commencing in September, 1946. The basic training was provided by St. Joseph hospital, Winnipeg, licensed under the "Practical Nurses" Act, March, 1945. There has been a total enrolment of 120, of whom 19 were veterans and the remainder were civilians.

Saskatchewan.—In Saskatchewan, three months' "basic" and three months' "hospital" training for "nurses' aides" was made available under the CVT program in October, 1946. Basic training centres were established at Saskatoon and Maple Creek. No provision for licensing has been made as yet. Twenty-two veterans and eight civilians enrolled for the courses.

Alberta.—Three months' "basic" and nine months' "hospital" training was provided under the CVT program in Alberta in January, 1946, with a basic training centre at Calgary. Legislation providing for the licensing of "nursing aides" was enacted this year. A total of 84, of whom 59 were veterans, have enrolled, since the training was provided.

British Columbia.—In April, 1946, British Columbia established under the CVT program, with a basic training centre in Vancouver, three months' "basic" training and eight months' "hospital" training for "practical nurses". There have been 34 trainees enrolled, all of whom are veterans.

Canada.—For all Canada, 449 are in training or have graduated, and 72 discontinued the courses.

At the present time, there is lack of uniformity in the several provinces in such

matters as the length of the courses, in the nomenclature used in describing the graduate trainees and in the types of uniforms the latter are required to wear.

Thus, while each of the provinces has established a three month basic training period, the Maritimes and Quebec have set the hospital training period at six months; Ontario, Manitoba and Alberta stipulate nine months, Saskatchewan three months and British Columbia, eight months.

In the Maritimes, Manitoba and British Columbia, the graduate trainees are known as "practical nurses"; in Quebec, as "trained attendants"; in Ontario, as "nurses' assistants"; and in Saskatchewan and Alberta as "nurses' aides".

Green uniforms are specified in the Maritimes and Ontario; various colours are permitted in Quebec; yellow in Manitoba; blue in Saskatchewan; grey in Alberta; blue in British Columbia.

Unemployment Insurance

Correspondence Courses for U.I.C. Personnel

IN the administration of the Unemployment Insurance Commission, as well as in its National Employment Offices, one of the problems connected with Staff Training lies in the teaching of many technical subjects to personnel not directly responsible for the technical work, but who require an over-all knowledge of the work of the Commission in order to perform their own functions properly. For example, personnel responsible for certain employment functions, must have an over-all knowledge of insurance work and vice versa.

In addition, the problem is further aggravated because some of the personnel are in constant travel status, and also because National Employment Offices are spread across the country.

Regular training is planned and systematically carried out dealing with specific work, but this training cannot always cover the other knowledge required to round out a complete knowledge of the work of the Commission. To overcome this situation, the Staff Training Division of the Unemployment Insurance Commission has devised correspondence courses, and it is intended to teach the over-all knowledge required through this medium.

Instruction Procedure

Research and administration of correspondence courses is undertaken by the Staff Training Division at Head Office. The courses do not attempt to give the technical detail of procedure, and are written for ease in understanding a complicated subject.

Each correspondence course is made up of a number of assignments which contain an explanation of the subject matter. Problems for study are included, and sufficient space is left for the student to record his answers. A set of model answers for each assignment and problem enables the student to check his own work.

The first assignment consists of a small booklet containing general notes on correspondence courses and particular notes of the specific course being started. Two assignments are sent the student after enrolment. The student completes and returns the first

assignment for correction, and while he is working out the second assignment, the first one is corrected and returned to him with a set of model answers, together with the next assignment and problems. Therefore, the student has always one assignment to work on while another is being corrected.

An employee may select any available correspondence course he desires. The courses are voluntary and are sent free of any cost. By taking any of these courses, the employee increases his knowledge of the Commission's work, which may stand him in good stead should he be called before an Examining Board for promotion. In addition, it is felt that some recognition should be given individuals who make this extra effort to become better acquainted with the work of the Commission, and to each employee who satisfactorily completes a course, a certificate is issued as an acknowledgment of this achievement. There is no compulsion to complete a course even after enrolment.

The first correspondence course was developed on the subject of insurance contributions, it is designed for all personnel not directly engaged in contribution work. The course consists of six assignments with an anticipated return of one assignment every two weeks, thereby covering the entire subject in twelve weeks or less. The first course was announced to the field early in June and the response has been exceedingly gratifying, as more than 50 per cent of the entire personnel of the Commission have already enrolled and it is anticipated this number will increase after the summer holidays. The second course is now in the process of research and development. It will be a general non-technical course entitled "Working with people".

It is intended that a series of such courses will be prepared in due time, covering all of the work of the Commission. It is further intended to have specific non-technical courses covering an over-all knowledge of a particular subject, general non-technical courses teaching personnel how to deal with the public, and specific technical courses for personnel working in specific technical branches.

Unemployment Insurance Statistics, May, 1947

Analysis of Claims for Benefit—Registrations

DURING May, 27,603 claims for Unemployment Insurance benefit were filed at local offices across Canada. This compares with 35,859 in April and 34,777 in May, 1946. Between April and May there was a decrease in claims filed in all provinces but the most substantial decrease (accounting for 3,285 out of the total 8,256) occurred in the Province of Quebec.

Similarly, the number of live claims showed a marked decrease at May 31 over April 30. As at May 31, there were 59,410 (40,164 male and 19,246 female) live ordinary claims as against 82,276 (60,490 male and 21,786 female) at April 30 and 98,810 (74,130 male and 24,680 female) at May 31, 1946. All provinces shared in this decline between April and May. In addition, at May 31, 3,264 other claimants (2,800 males and 464 females) had live claims, compared with 3,794 (3,391 males and 403 females) at April 30. These are largely short-time claimants.

A total of 38,344 claims was adjudicated at Insurance Offices during May, 24,939 being considered entitled to benefit and 13,405 not entitled to benefit. The chief reasons for non-entitlement were: "insufficient contributions while in insurable employment" (5,302 cases), "refused an offer of work and neglected an opportunity to work" (2,815), "voluntarily left employment without just cause" (2,628 cases). These include re-adjudications in

cases where circumstances such as the refusal of an offer of suitable employment arise after the original disposition of the claim.

During May, 83,982 beneficiaries were paid a total of \$3,072,952 for 1,584,428 compensated unemployed days, compared with 100,285 persons paid \$3,780,749 for 1,943,793 days in April and 127,866 persons paid sums totalling \$5,221,870 for 2,719,294 compensated days in May, 1946.

Thus, the average duration of the unemployment compensated during May was 18.9 days as against 19.4 days in April and 21.3 days in May, 1946. The average amount of benefit paid per beneficiary was \$36.59 in May, \$37.70 in April and \$40.84 in May of last year. The average amount of benefit paid per compensated day of unemployment was: \$1.94 in May, \$1.95 in April and \$1.92 in May, 1946.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending May, 1947, showed 2,580,754 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1947.

As at May 31, 1947, 176,344 employers were registered as having insurance employees.

The column for "Bulk" includes Miscellaneous \$1,742.38 and Contributions for Armed Service \$11,370,360.45.

The column "Interest on Investments and Profit on Sale of Securities" represents:

(a) The exact amount of interest earned for each completed fiscal year and the approximate amount for each month in the current year;

(b) Profit on sale of securities taken into account at the end of each year only.

*April receipts for Stamps and Meter were included with figures for March 1947.

Digest of Selected Decisions of the Umpire under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945, number of the *LABOUR GAZETTE* and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

The selected decisions are published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU-B. 97

(27 June, 1946)

Held that a statutory holiday should not be regarded as a non-compensable day if such statutory holiday comes within a period of unemployment.

The material facts of the case are as follows:—

The claimant, a single man, aged 19, was employed as a labourer with a fuel company from December 28, 1945 to January 21, 1946. On March 7, 1946, the claimant filed claim for benefit and from that day on signed the Unemployment Register declaring himself to be unemployed on each of the days for which he was claiming benefit. The claimant declared Good Friday, April 19, 1946 (a statutory holiday) as an unemployed day and requested that benefit be allowed for this day. Good Friday was treated as a holiday in accordance with Commission Minute under Section 33 (c) of the Act and no payment was made for that day.

The claimant appealed to the Insurance Officer who confirmed the ruling of the local office, on the grounds that Good Friday was a statutory holiday and therefore an idle day rather than an unemployed day, it being general practice in industry to allow employees statutory holidays as idle days, with the exception of those persons whose employment is of such a nature that it would be necessary for them to continue their work

because of some exceptional condition or circumstances.

From this decision the claimant appealed to the Court of Referees on the grounds that he had worked on Good Friday, 1945, and had paid a contribution for that day. The Court of Referees reversed the decision of the Insurance Officer, being of the opinion that any person whose employment has been terminated is wholly and completely unemployed during the period following the termination of employment until new employment is obtained, regardless of whether any of the days falling within such period of unemployment is a holiday or not.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the grounds that the Court of Referees had misinterpreted or did not properly consider the true intent and purpose of Section 28 (ii) of the Act.

DECISION

The decision of the Umpire was that the claim should be allowed and gave as his reasons:—

It is submitted by the Insurance Officer that statutory holidays are in fact "idle days", and not being days of usual employment for the people of Canada the said days should be ignored and non-compensable whether occurring during a period of employment (See 33 (c)) or when the claimant has no current employer. Statutory holidays being idle days (those on which no work is being done) may be considered as potentially idle days (days on which no work would be done or available), when unemployed, and as such should be non-compensable.

Reference is made to Section 33 (c) of the Act in connection with which I have already given a decision in case No. CU-B. 62 wherein I stated:—

It is my opinion that Paragraph (c) of Section 33 of the Act must be interpreted as applying only to claimants who are actually employed but who are laid off for a day or more and who claim benefit for a holiday.

In the present case the claimant is completely separated from his employment and is not affected by any holiday which occurred at the factory where he was last employed. The question involved is whether all statutory holidays should be treated as non-compensable days.

It appears from the submissions of the Insurance Officer that the claimant should be deemed to be not unemployed even though he signs the proper declarations saying that he was unemployed on that day and may also be available for employment if same were offered to him. In this case the claimant has shown in the submissions that he was actually employed on Good Friday of the previous year indicating that he was available on that particular day. He might have been available again on the day on which the Insurance Officer claims he was not available because of it being a statutory holiday and therefore regarded as an idle day.

The term "idle day" is a new definition which is not to be found anywhere within the provisions of the Unemployment Insurance Act and therefore it would be beyond my jurisdiction and against the provisions of the Act if I had to declare statutory holidays as idle days, and therefore non-compensable.

In my opinion Section 28 (ii) is not ambiguous. If an insured person proves in the prescribed manner that he is unemployed and that he is entitled to benefit, and if a statutory holiday comes within such period of unemployment it would appear to me he is entitled to benefit on such day so long as he is available to accept suitable employment if such be offered to him.

Section 28 (ii) must also be considered in relation to Sections 35 and 36 of the Act. Section 35 states:—

An insured person who is unemployed for six full days in any calendar week or for the full number of days constituting the normal week at the plant, factory, workshop or other place of usual employment, shall receive benefit subject to the provisions of section thirty-six at the weekly rates prescribed in the Third Schedule to this Act, and for any calendar week during a portion of which he is unemployed, he shall receive benefit for his benefit days in that week at the daily rates prescribed in that Schedule.

It would appear to me in considering this Section that it is intended to give a person in receipt of benefit, payment for six full days in any calendar week as there is no reference made to any deductions for any statutory or other holidays.

Section 36 of the Act specifically states the days on which an insured person shall not be entitled to receive benefit and again no reference is made to statutory holidays.

Had it been the intent of the Act not to regard statutory holidays as days of unemployment or as days where compensation

should not be paid to one in receipt of benefit, then reference would have been made to same in one of the two Sections of the Act to which I have referred.

Taking all factors into consideration I cannot help concluding from the wording of the Act that it was not intended nor does its wording infer that an insured person be debarred from receiving payment for statutory holidays assuming the man is unemployed on that day and that he conforms in other respects to the provisions of the Act.

CU-B. 199

(24 January, 1947)

Held that insured persons who are merely off work owing to the plant, where they are employed, being shut down for a holiday or vacation period are not entitled to receive benefits under the Act during that period and that no distinction can be made between those who receive pay during vacation periods and those who do not.

The material facts of the case are as follows:—

The claimant, a married man, aged 78 years, registered for work as a machinist, was employed as such at 76 cents an hour by a steel works from January 27 to July 27, 1946, on which latter date a general stoppage of work occurred at the plant in the form of a vacation for the employees and the claimant was amongst those affected by this temporary suspension of employment.

The claimant made claim for benefit on July 29, 1946, which was disallowed by the Insurance Officer who disqualified the claimant under Section 28 (ii) of the Act as from July 29, 1946, stating:

- (1) that the claimant was unemployed during a period recognized as a holiday for his grade or class or shift;
- (2) that the holiday period was established by mutual agreement between employer and employees; and
- (3) that the holiday period had first been established in 1945;

and that he was not deemed to be unemployed under the provisions of Section 33 (c) of the Act.

From this decision claimant appealed to a Court of Referees and made the following submission:—

The Company posted a Notice which reads as follows:

The annual vacation for.....will be held from July 28 to August 3 for all

departments. We are advised that the Unemployment Insurance Commission will consider any man not entitled to vacation with pay, as being out of work through no fault of his own for this period or part thereof.

The claimant was represented before the Court by the secretary of the union to which he belonged and the Court, by a unanimous decision, reversed the decision of the Insurance Officer, stating, in part:

"The question for the Court to decide is, was the appellant unemployed within the meaning of the Unemployment Insurance Act on the day he filed his claim for benefit?

"It was submitted by.....(the secretary of the Union) that the arrangement for the annual holiday period made in 1945 was agreed to by the Union representing the man, but the agreement only took care of the class of employees who were entitled to vacation with pay. It was primarily intended for them, and as all agree, the men of this class are admittedly not eligible for Insurance Benefits. But the shutting down of the plant affected others who were not so fortunately situated. It was a hardship for the class of employees who was not eligible for the vacation period. They were therefore in 1945, considered to be out of work through no fault of their own. Applications were made for benefits which were recognized as in order, and they were paid without question.

"We consider that it has not been shown that the holiday period, when the appellant was unemployed, was a recognized holiday period for the men of his class, that is, the men not entitled to vacation with pay. It was neither agreed to nor recognized by the contracting parties. On the contrary, it was definitely understood and agreed that all for whom work could be found would work during this holiday period, and we are informed that the men would be glad to do so. Work was found for some maintenance men not entitled to vacation, who worked as usual. Others for whom no work could be found were idle and some could ill afford it.

"An earlier decision of the Umpire deals with conditions approaching in some respects the circumstances of the appellant. It is Case No. CU-B. 2, which was decided by the Umpire in 1943. The claim was disallowed under what seems to be similar circumstances. There are, however, some important differences which will be seen by an examination of the cases.

"The stoppage of work in the plant for two weeks was admittedly customary. The period was recognized as an annual holiday period without pay. It had been accepted as such

by the firm and by the employees as such for the past few years. It was a settled custom and the employees determined the period. The question of insurance benefits was raised by one of the employees who claimed that she was not a party to the arrangements about the holiday period and therefore filed her claim for benefits. It was shown however, that the agreement and recognition of the holiday period, was a matter of several years standing. It was recognized by both parties and it applied equally to all the employees. They were all in the same class and the claim was therefore disallowed.

"We have a different situation in this case before us. The arrangement for the shut-down was not understood and recognized as a holiday period for him and others classed with him. He was considered as temporarily unemployed because of the shut-down and actually was so. The shut-down in this case was first carried out in 1945, but it had not reached the stage where the term 'customary and recognized' could be applied to it for it is evident that whatever decision is made, a new arrangement must be worked out for 1947.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the following grounds:—

"(1) that the vacation period was established by agreement between management, the Union, representing all employees, and the War Labour Board as an annual event involving a shut-down of all departments.

"(2) that such vacation period therefore became an implied condition of an employee's contract of service and a recognized holiday for all employees.

"(2) that the employees not entitled to vacation with pay cannot be deemed to be a separate grade or class or shift within the meaning of Section 29 (c) of the Revised Act. (Section 33 (c).)

"It is respectfully submitted:

"(1) that the Court of Referees was in error in deciding

(a) that the vacation period was not a recognized holiday within the meaning of Section 29 (c) of the Act. (Section 33 (c).)

(b) that the employees in question belonged to a grade or shift or class of employees which was beyond the scope of the holiday agreement made between the Union, Management and the War Labour Board.

"(2) that the claimant was not unemployed within the meaning of the Unemployment Insurance Act during the vacation period commencing July 28, 1946, and that the original decision imposed by the Insurance Officer should be restored."

DECISION

The Umpire's decision was that the claim should be disallowed and gave as his reasons:—

I am asked to decide whether the temporary and partial suspension of work, which took place on July 27, was a vacation period within the meaning of the Act. If such was the case, then the claimant is not entitled to benefit. On the other hand, if the suspension of work and his separation from employment was due to other causes, such as a temporary lay-off, and was not a vacation period, then the claimant would be entitled to benefit.

The only actual evidence in this matter on record is the statement that was posted by the Company just prior to the stoppage of work on the 27th day of July, the first paragraph of which reads as follows:

"The annual vacation for.....will be held from July 28 to August 3 for all departments."

In the latter part of the notice, it is stated:—

"We are advised that the Unemployment Insurance Commission will consider any man not entitled to vacation with pay as being out of work through no fault of their own for this period or part thereof."

This is an assumption both by the local office of the Unemployment Insurance Commission and by the management of the firm which cannot be accepted, because it is contrary to the purpose and intent of the Act and to the very terms thereof.

There was either a stoppage of work on account of the annual vacation or there was

not. One cannot separate the men who are to receive vacation with pay and those who do not.

The evidence given before the Court of Referees indicates many anomalies which arose between the Company and the men in regard to those who are entitled to receive vacation with pay, but these conditions of employer and employees' relationship at the plant can in no way affect the interpretation of the Act.

The Act is quite clear; Section 33 (c) reads as follows:—

"An insured person shall not be deemed to be unemployed . . .

(c) on any day which is recognized as a holiday, for his grade or class or shift in the occupation or at the factory, workshop or other premises at which he is employed unless otherwise prescribed."

The temporary suspension of work was undoubtedly a recognized holiday at the factory at which the claimant was employed and the latter also belonged to a grade or class affected by the vacation period. These holidays had been mutually agreed upon by both the Company and its employees, but evidently there was some misunderstanding as regards the position of the men in their relation to the Unemployment Insurance Act. Although the employees at the plant may have been paid benefit previously, under somewhat similar circumstances, it does not alter the basic fact that during the time that these men were not working, subsequent to July 27, 1946, they were actually on annual vacation; therefore, they cannot be deemed to be unemployed within the meaning of the Act.

Whether the employees received pay or not during the vacation period does not alter the meaning of the Act; as already pointed out no distinction can be made between those who receive pay during vacation periods and those who do not. This is a matter entirely between employers and employees to determine.

"Benefit Years" under Unemployment Insurance Act

DURING recent years Treasury offices of the Unemployment Insurance Commission have prepared daily reports on benefit years established, and monthly reports on benefit years terminated by insured persons. These have been analysed and tabulated by the Dominion Bureau of Statistics and made

available in monthly reports for the convenience of actuaries, statisticians and other administrative officers of the Commission.

In June the Bureau of Statistics issued a summary report covering the twelve monthly tabulations for the calendar year 1946. It is explained that the report must be considered

as preliminary and the data presented as subject to revision when final checking is completed and additional information, such as benefit days paid on each benefit year, has been assembled. On the basis of past experience, however, it is pointed out that such revisions and adjustments will be of a minor nature.

Benefit Year Defined

In relation to a person insured under the Unemployment Insurance Act, 1940 and its subsequent amendments, a "benefit year" means the period of 12 months beginning on the date on which an application for benefit is made and proof furnished that contributions have been paid by the applicant or on his behalf, while he was in insurable employment for not less than 180 days during the two years immediately preceding the date upon which the claim for benefit was made. (U.I. Act, Section 40, subsection 1.)

Thus, a benefit year is established for an insured person, who upon becoming unemployed, makes application in the prescribed manner, and has satisfied the minimum contribution requirements. However, it is pointed out that the receipt of benefit is contingent upon other conditions, and, in order to draw benefit a person must prove that he is unemployed, capable and available for work and unable to obtain suitable employment. (U.I. Act, Sections 28 and 29.)

In the case of each benefit year except the first, at least 60 of the required 180 days' contribution must have been paid since the commencement of an applicant's immediately preceding benefit year. Effective October 1, 1946, a person must also prove that: (1) of the contributions paid in respect of him during the immediately preceding year, not more than half were paid at the lowest schedule rate (class "O"); (2) he is at least 16 years of age.

The duration of benefit authorized is computed in each case as "one-fifth of the number of days for which contributions have been paid during the preceding five years, less one-third of the number of benefit days drawn during the preceding three years."

Daily Rate of Benefit

The daily rate of benefit is based upon the average daily contribution paid by the person during the immediately preceding two years and upon whether or not he has a dependent within the meaning of the Act. (Third Schedule.) The daily rate of benefit is 34 times the average daily contribution in the case of a person without a dependent and 40 times the average daily contribution for a person with one or more dependents.

It is stated that in many cases where all the conditions are fulfilled, the persons concerned become re-employed before any benefit days accrue. The first nine days (called "waiting days") of unemployment in any benefit year are not compensable, nor is the first day of unemployment in any claim week unless the person is unemployed for the whole of that week, or unless the first day of unemployment immediately follows a week of continuous unemployment. Thus, of the 270,413 persons with benefit days available at some time during the year 1945, 88,985 drew no benefit.

Attention is drawn to the fact that "once a person establishes a benefit year and proves his entitlement to benefit, he may draw at the daily rate and for the number of days authorized, so long as he satisfies the provisions of the Act." Further, "the benefit days may be paid during one or more periods of unemployment in the 12 months beginning on the day the benefit year commenced . . . but the person must prove his entitlement to benefit during each period of unemployment in the course of that benefit year."

The report indicates that "a benefit year *automatically* terminates twelve months from the day on which it is established, if the rights authorized are not completely used up by that time. It terminates by *exhaustion* when the benefit days authorized have all been used—this may happen at any time throughout the year." However, "upon termination of one benefit year a person may establish another if he makes application in the prescribed manner, has made 180 days' contribution during the preceding two years and 60 days' contribution since the commencement of his immediately prescribed benefit year."

Tabular Analysis

The report presents in tabular form (1) the number of benefit years established during the calendar year 1946, for Canada and by provinces and by sex; (2) benefit years classified by age groups; (3) benefit years by daily rate of benefit authorized; (4) breakdown of benefit years established, by industry; (5) benefit years terminated during 1946, and, of these, the number terminated by exhaustion of benefit rights and the days paid on these exhausted claims during 1946; (6) benefit years exhausted during the calendar year 1946, classified by province and by sex, by daily rate of benefit authorized, by industry and by occupation.

Copies of the report may be obtained from the Dominion Bureau of Statistics, Ottawa, price 25 cents.

Employment, Hours and Earnings

Introduction

EMPLOYMENT continued its usual seasonal upswing during May and early June. Labour surpluses had been reduced substantially below all 1946 records and labour shortages were developing rapidly in a large number of areas. Seasonal activity in agriculture, in construction, and in mining began during May and steadily gained momentum thereafter. During June transportation, logging, and service added to the general demand for manpower. The late spring handicapped production to some extent although only isolated cases reported any serious repercussions on employment.

For the first time in two years, construction contracts awarded were declining, and it was not expected that the 1947 total would reach that of 1946. Residential construction had fallen off in many areas. The small investor was waiting until the competition for labour and materials was not so great and costs were lower. Industrial construction was influenced by the same trends but to a lesser extent. Despite these developments, however, the immense amount of work on hand for this industry indicated an unprecedented labour shortage.

Agricultural activity, seriously delayed by the late spring, was picking up rapidly. Inter-regional seasonal transfers of farm labour were progressing smoothly. Several hundred farm workers were expected to arrive shortly from Holland which would further ease the scarcity of year-round agricultural labour.

The tourist season opened later than usual this year because of unfavourable weather, but a heavy volume of tourist trade was expected during the summer and autumn. Students on vacation offered a valuable source of labour for summer resorts and other service establishments.

Employment in heavy manufacturing was expanding as steel supplies improved. Foundry workers and metalworkers of all types were in heavy demand.

By the end of June, unplaced applicants were 19,000 fewer than the lowest amount reached during 1946. That is, available job-seekers were already substantially below those recorded in the peak of seasonal activity

which normally occurs in the late summer and autumn months. The remainder of 1947, therefore, was expected to see a definite shortage of labour rather than any general scarcity of jobs. At July 3, the number of applicants on file at National Employment Service offices totalled 114,528 (80,977 male and 33,551 female). Similarly, the number of persons signing the unemployment insurance register was declining sharply. Live claims fell from 82,000 at May 1 to 59,000, one month later.

Employment in the eight leading industries (as reported by employers to the Dominion Bureau of Statistics) showed a slight contra-seasonal downtrend during April due to the sharp reduction in logging employment. The index of employment (June 1, 1941=100) fell by six points to total 117.7 at May 1. At that time, recorded employment in firms reporting 15 or more employees totalled 1,849,000.

The continued upward revision of wage rates was reflected in a gain of seven points in the hourly earnings of hourly-rated employees in manufacturing. At May 1, the post-war peak of 78.3 cents per hour was reached. Average hours worked, on the other hand, remained steady over the last two months and totalled 43.2 per week in the last week of April.

The Maritime region reported that, due to the normal seasonal expansion, unemployment was markedly lower in construction, agriculture, and fishing. Steady movements of workers to factories and construction projects in Ontario relieved to some extent the chronic unemployment problem. The recent settlement of the coal strike was expected to improve general conditions in coal areas. Farm labour demand had not been very heavy because of the unfavourable weather which delayed seeding. Deep-sea fishing catches were large and fish processing plants were working at capacity. Port activity at Halifax and Saint John was slack, but most of the jobless dockworkers were returning to their usual summer work or to farms, or taking jobs as general labourers. Shipbuilding employment was

increasing slightly. Construction work was progressing well, with no shortage of workers.

The Quebec region reported that general industrial activity remained at the high level of the previous month, but shortages of materials, machinery and housing prevented the usual marked seasonal advance. Farmers working temporarily in factories during the winter also caused some dislocation by returning to their farms. Heavy manufacturing industries were very active, production of structural steel, boiler engines, and other machinery was expanding steadily. Ship-building employment was on the uptrend. Textile centres still reported an urgent need for labour and were trying to recruit workers from the surplus centres such as Quebec City. The log drive, already delayed by late ice-clearing, had run into further difficulty because of high water levels in most rivers. Persistent bad weather and flood conditions held up farming and construction work in the western section of the region. Construction, however, was gaining momentum and the list of available tradesmen was diminishing rapidly. Weather conditions also delayed summer activity in the tourist trade, but a record number of visitors was expected once the season opened.

In the Ontario region, there was a growing demand for workers in all industries and labour surpluses were speedily disappearing. Manufacturing employment was approximately 30,000 higher than at this time last year, and expansion continued daily. Seasonal movements of factory and foundry labour to outdoor jobs had further increased industrial labour requirements. The transfer of unemployed workers from the Maritimes had helped to speed up heavy industry and foundry production. The shortage of female labour was growing even more acute and plans for inter-regional transfers and for immigration of women workers were warmly supported. The chronic scarcity of textile workers had been aggravated by a high rate of labour turnover; labour-management committees were studying this problem in several plants. The logging industry reported a general need for pulpwood cutters; river drives had been progressing well, although high waters were a handicap in some areas. Improved weather permitted greater activity

in construction, and tradesmen were in heavy demand.

In the Prairie region the seasonal upswing was well underway despite the delay of the late spring. There was an active demand for farm labour; orders for Polish veterans were still being received, but the veterans arriving at the end of May all signed contracts with sugar beet associations which were extremely short of help. Mining exploration companies required men for development work. Hardrock miners were in demand for base metal operations, and certified coal miners remained scarce in Alberta coal fields. Experienced pulpwood cutters were needed; some university students were being placed as bushmen. The commercial construction program continued to expand, in the face of rising costs of materials and labour. Residential builders were showing greater caution as evidenced by a slackening in building permits, but nevertheless projects were so numerous that a shortage of tradesmen was expected.

In the Pacific region the general employment situation showed rapid improvement, the current picture presenting a great advance over that existing a year ago. Since employment in this region is based chiefly on primary industries, the seasonal fluctuations were greater than in the highly industrialized central regions. The upswing was reaching the point where employment was available for all job seekers who could meet requirements with respect to ability and location. The problem of job location was important since almost 70 per cent of the labour surplus recorded at employment offices was centred in Vancouver alone, while much of the labour demand came from outlying areas. There was every indication of increasing labour shortages in all primary industries. University students temporarily eased the scarcity of mining labour, but skilled miners were still needed urgently. Wage increases were successfully negotiated for the base metal industry at Trail. Logging placements were affected by uncertainty due to wage negotiations. Most orders for construction workers were for out-of-town projects. In construction, employment seemed to be shifting away from low-costing housing into large industrial projects.

Employment and Payrolls at the Beginning of May, 1947

LARGELY as a result of seasonal curtailment in logging operations, employment as reported by leading establishments in the eight major industrial divisions showed a decline at the beginning of May, when the trend was also downward in railway construction and maintenance. On the other hand, moderate improvement was indicated in manufacturing as a whole, and there was increased activity in mining, communications, transportation, construction and maintenance, hotels and restaurants, wholesale trade and other industries.

The Dominion Bureau of Statistics tabulated monthly data from 17,612 firms which employed a working force of 1,848,688 persons. This number was less by 10,818 than the total reported by the same employers at the beginning of April; the loss of 0.6 per cent in the month was contra-seasonal in character according to pre-war experience, although there were general reductions at May 1 in several of the war years. Based on the 1926 average as 100, the index fell from 180.7 at April 1, to 179.7 at May 1, when it was the highest in the record for that date. The previous maximum index for May 1 was 178.2, in 1944 and 1945, while the figure at May 1, 1946, was 169.3.

Payrolls

Accompanying the indicated recession in employment at May 1 from April 1 was a slight loss in the sums disbursed in weekly salaries

and wages by the co-operating establishments. The decline amounted to 0.1 per cent, while that in employment was stated as 0.6 per cent. The payrolls reported at the date under review aggregated \$66,379,999, as compared with \$66,444,606 in the preceding period of observation. The latest total represented an average of \$35.91 per person in recorded employment, as compared with \$35.73 at April 1. The per capita figures at May 1 in earlier years for which statistics are available were as follows: 1946, \$32.05; 1945, \$32.55; 1944, \$32.26; 1943, \$30.59 and 1942, \$28.59.

Based on the June 1, 1941, disbursements as 100 per cent, the index number of payrolls in the eight leading industries at the date under review was 163.7, as compared with 163.9 at April 1, 1947, and 137.6 at May 1 of last year. In the latter comparison, there was an increase of 19 per cent in the indicated weekly salaries and wages, as compared with that of 6.1 per cent in the number of workers. The average weekly earnings showed an advance of 12 per cent.

When the figures for financial institutions are included, the latest survey shows a total of 1,928,704 persons in recorded employment, and payrolls amounting to \$69,375,004. The same establishments had reported 1,939,388 employees at the first of April, when their disbursements in weekly salaries and wages had been stated at \$69,396,376. The per capita figure in the nine major industrial

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

groups, including finance, stood at \$35.97 at the beginning of May, as compared with \$35.78 at April 1, and \$32.16 at May 1 a year ago. In the 12 months, there was a rise of 6.2 per cent in recorded employment in these industries, accompanied by that of 18.8 per cent in the aggregate weekly payrolls, while the average earnings were higher by 11.8 per cent.

Table II summarizes the latest statistics of employment and payrolls for the major industrial divisions, the provinces and economic areas, and the leading industrial cities, with comparisons as at April 1, 1947, and May 1, 1946. Table I contains a monthly record for the eight leading industries as a whole and for manufacturing, showing the movements of employment and payrolls since 1943.

The disbursements of the co-operating firms at June 1, 1941, are used as the base in calculating the index numbers of payrolls. To provide a comparison of the trends of employment and payrolls, the index numbers of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. Table I shows that in the period for which information on payrolls is available, the number of persons on the staffs of leading establishments in the eight major industrial groups has risen by 17.7 per cent, their aggregate weekly payrolls by 63.7 per cent, and the per capita figure, by 42.2 per cent. Including finance, the increase in employment from June 1, 1941, to May 1, 1947, amounted to 18.2 per cent. The gain in the salaries and wages in this comparison was 64 per cent, while that in the average weekly earnings amounted to 41.1 per cent. As in previous reports, the following factors may be mentioned as mainly responsible for the much greater rise in the payrolls than in employment: (1) the payment of higher wage-

rates in very large numbers of industries and establishments, in addition to the general increase resulting from the mandatory payment of cost-of-living allowances to the majority of workers; the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage-rates as from February 15, 1944; (2) the progressive up-grading of employees as they gained experience in their work and (3) reductions in the numbers and proportions of women workers.

The general increase in employment in manufacturing at May 1, 1947, as compared with June 1, 1941, amounted to 16.5 per cent, that in the indicated salaries and wages to 62.7 per cent, while the weekly average earnings rose by 41.8 per cent. The advance in recorded employment in the same comparison in the non-manufacturing industries taken as a whole was 19.1 per cent, and that in weekly payrolls, 64.9 per cent. The general increase in the per capita figure in the non-manufacturing classes taken as a unit was 42.3 per cent.

With regard to the marked variations in the average earnings of workers in the different industrial classes, it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups, and in the working hours. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time, or over-time may also considerably influence the reported aggregate and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of paramount importance.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT, PAYROLLS AND WEEKLY EARNINGS, BASED ON JUNE 1, 1941=100, TOGETHER WITH PER CAPITA WEEKLY EARNINGS

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, and clay, glass and stone products.

The Sex Distribution of the Persons in Recorded Employment

As already stated, the co-operating firms in the eight leading industries employed a staff of 1,848,688 persons at May 1, of whom 1,445,394 were men and 403,294 were women. As compared with April 1, the reported number of men showed a decrease of 9,794, or 0.7 per cent, while the accompanying loss among women amounted to about 1,024, or 0.3 per cent. In the nine leading industries, in which there was a general decline of 10,684 persons, the number of women in recorded employment was lower by 947, or 0.2 per cent, at May 1 as compared with a month earlier. The number of men laid off by the co-operating establishments approximated 9,737, or 0.6 per cent. The disparities in the rates of

change among workers of the two sexes result largely from seasonal causes, the pronounced curtailment in logging and in railroad construction and maintenance particularly affecting men workers.

The latest ratio of women per 1,000 employees in the case of the eight major industrial groups was 218, as compared with 217 at April 1, 1947, and 225 at May 1, 1946. In the case of the nine leading industries, the proportion at May 1 was 228, as compared with 227 at April 1 and 236 at May 1 of last year. When the ratio of women was at its highest point, at October 1, 1944, the number of women reported in the eight industries constituted 261 per 1,000 workers, and in the nine major industrial divisions, 271 per 1,000.

Operations of the National Employment Service

IN the face of sharp reductions in both persons seeking work at employment offices and employers requesting additional help, placements have shown relatively little decline.

During the first five months of 1947, the respective decreases over the comparative period last year were: applications, 17 per cent; vacancies, 10 per cent; placements, 3 per cent.

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

In general, the lessened activity at employment offices was the reflection of the relatively stable employment situation. Unplaced applicants had fallen to an all-time low and by July 3, the latest available date, totalled 114,500. All indications pointed to an easy absorption of "first jobbers" at the close of the school year. Heavy orders were on file from employers for immigrant labour while

others were utilizing the pools of unemployed labour in Nova Scotia and other areas.

A conference of employment advisers representing all universities throughout Canada convened at Laval University, Quebec City, June 17-21. It was disclosed that, except for isolated cases, absorption of university students into both summer and permanent employment was complete.

Agriculture

Interruptions in seeding operations, especially in the Eastern provinces, tended to lower the usual labour requirements at this season of the year. However, excellent haying conditions offset, to some extent, the downtrend in labour needs.

The announcement and subsequent arrival of the Dutch and Polish immigrants brightened the farm labour scene. A large number were directed toward the seriously undermanned sugar beet areas and others were scheduled to be absorbed in general farming.

Two of the three main agricultural excursions normally undertaken each year by National Employment Service were getting under-

way. Movement of workers to British Columbia for berry picking began at the end of May and will conclude around the end of July. The movement of Prairie farm labour to Eastern points was charted to begin June 23; some 2,000 experienced farm workers were expected to be moved within an approximate three-week period.

Placements into agriculture and fishing edged downward from the April peak to average 477 per week in May. Similarly, fewer vacancies were reported during the May period with the result that the number on file dropped to 3,157 at the month-end.

Non-Agricultural Industry

Vacancies Notified

The seasonal upswing in vacancies during the spring of 1947 was relatively slow. During March, April and May the respective monthly percentage increases were 8 per cent, 6 per cent and 6 per cent. In contrast, the comparative period in 1946 registered gains of 19 per cent, 18 per cent and 8 per cent.

In part, the current picture is a reflection of the era of full employment now existing. Employers, realizing the limitations of the available sources of labour are not placing orders for help in full. There has been a growing tendency to look toward immigration or transfer of labour from depressed areas, such as Cape Breton, as a possible means of satiating demand.

During May, vacancies showed a slight seasonal gain with jobs reported in increasing numbers in construction, trade, service, food processing and machinery manufacturing. Average weekly vacancies numbered 34,017 leaving 99,491 on file at the month end. One year before, 40,089 had been notified each week with 112,426 unfilled at the end of the period.

Mining.—The employment situation in the mines throughout the post-war period has been one of continued labour shortages. Any large-scale remedial measure has been blocked by limitations on housing accommodation. The

industry has been particularly handicapped by the shortage of skilled labour which in turn has curbed expansion of opportunities for unskilled help.

To some extent, labour shortages were eased by the summer employment of university students but this offered only temporary relief. Until more trained help becomes available, either through importation of skilled miners or enlarging training programs, the extensive expansion warranted by the heavy world demand for base metals and gold is unlikely to take place.

There were 689 vacancies notified per week in mining during May—representing a 23 per cent drop over the April requirements and a 45 per cent decline over the number reported in May, 1946. The falling off reflected largely the inactivity in the Maritime coal mines due to labour disputes.

Manufacturing.—The volume of industrial production continued at close to capacity. However, signs of over-production had begun to appear in certain specific lines of manufacturing—stuffed furniture, nylon thread, shoes, aluminum cooking utensils and certain basic building materials. With the exception of these, prospects for employment during the remainder of the year appeared to be excellent.

TABLE I.—UNFILLED VACANCIES AND UNPLACED APPLICANTS AS AT FIRST OF MONTH

Month	Unfilled Vacancies			Unplaced Applicants		
	Male	Female	Total	Male	Female	Total
July, 1944	142,365	64,608	206,973	40,218	28,586	68,804

July ⁽¹⁾ , 1947	59,979	35,273	95,252	80,977	33,551	114,528

(1) Latest figures subject to revision.

Heavy industry in general had been undermanned and the movement of workers to agriculture and construction during the warmer weather aggravated the shortage. Some easing had resulted from the importation of labour from the Maritimes. Also, steps were underway for recruiting help in Great Britain.

Labour demand in food processing plants grew steadily during May. Little difficulty was expected in meeting needs since a large proportion of help is recruited locally among the married women and student labour force.

The shortage of woman power for factory work became even more acute during May. Textile, rubber and radio workers continued in short supply with little possibilities of satisfying demand through the normal channels. Many employers have indicated their desire to import help.

Average weekly vacancies notified in manufacturing numbered 10,201, indicating a 2 per cent decline over the month, while a 20 per cent drop occurred during the year.

Construction.—The construction boom predicted for the 1947 season had not materialized. Rising costs brought about a large scale cancellation of contracts, especially in residential building. Many contractors would not quote a specified price on tenders for fear of additional upward revisions in material costs.

The withdrawal of much residential work was offset by accelerated activity in industrial and public utility construction. Already journeymen, especially in the trowel trades, were in great demand and serious shortages were expected to develop in practically all areas. It was hoped that the situation would be eased somewhat by an integrated plan of moving tradesmen from job to job.

Vacancies notified in construction averaged 5,423 a week leaving 11,562 unfilled at the end of May.

Transportation.—Track maintenance men were difficult to obtain in some areas, principally in Ontario and British Columbia. Orders were placed in clearance, however, and relief was forthcoming from the Maritime and Prairie provinces.

The opening up of inland waterways greatly increased port activity in Montreal while at the same time causing some unemployment among stevedores and longshoremen at the ports of Saint John and Halifax.

The seasonal upswing of activity in highway transportation was reflected in the marked downtrend in the number of unplaced truck drivers.

Vacancies in transportation totalled 1,649 per week during May, leaving 3,045 unfilled at the end of the month.

Trade.—The restraining effect of price decontrol on retail business was being felt throughout the country. Trade was reported slack in the Prairie and Maritime regions; the latter region was suffering particularly from the reduced purchasing power caused by the prolonged strike. In the remaining regions, trade was stimulated to some extent by the start of the tourist traffic.

Labour demand in trade establishments compared favourably with that reported in 1946. The increased employment needs, however, were concentrated mainly in Toronto where large retailers were seriously short of clerical help. Jobs on a commission basis were in abundance but interested applicants were scarce. Orders for summer help were absorbing a fair number of students temporarily during the holiday period.

Vacancies in trade averaged 3,732 per week in May leaving 10,334 positions unfilled at the end of the month.

Service.—The holiday needs of tourist camps and summer homes were adequately met with

little difficulty. Recruitment of help took place largely among students and teachers although a considerable number of the regular staff left restaurants, domestic service, laundries, and hotels for the summer season.

The exit of the regular service workers aggravated the existing shortage of personal and domestic workers in urban centres. Labour needs in restaurants and hotels continued at a high level in order to cover the usual labour turnover as well as replacements for regular staff on vacation. The unrelenting demand for domestics showed little signs of alleviation and various women's organizations throughout the country were pressing for immigration as the only means of relief. Labour turnover was increasing in laundries and dry cleaning establishments due to the warmer weather.

Vacancies in service (other than public and professional) jumped by nine per cent during May to average 6,530 per week.

Applicants Registering

The relative stability existent in the labour market was indicated by the dropping off in job-seekers to an all-time low. Weekly applications fell to 29,000 in May in contrast to the yearly high of 41,000 in January and 60,000 during peak demobilization. The winter unemployed had, for the most part, been successfully absorbed into summer employment by the end of May. The unplaced had fallen to 128,000 which represented less than 3 per cent of the civilian labour force.

In general, undermanned industry was looking to three main sources for recruitment of additional help—first jobbers, transfers from unemployment areas, and immigration.

The normal influx of first jobbers at the close of the school term had begun. Relief was felt in the technical field with the absorption of graduating engineers, but the limited number graduating left much of the demand unsatisfied. Several thousand high school students would be available at the end of June and already many employers had contacted them for employment.

Transfer of workers from chronic unemployment areas was gaining momentum. Some 1,200 Maritime workers had, since the beginning of 1947, been moved to gainful employment in labour-short mines, factories and farms in Ontario. The unemployed in Windsor and Oshawa were recruited for factory work in Brantford and Kitchener. Unplaced women in Sudbury were recently transferred to factory work in St. Thomas.

Immigration offered an important source of labour supply. During the first four months

(Continued on page 1056)

Method Used to Adjust for Seasonality

On the basis of their periodicity, the movements of any time series can be classified as secular, cyclical, seasonal, and irregular.

For analytical purposes, it is valuable to adjust a specific time series so that the seasonal movement is eliminated. This adjustment has been made to the indices of employment shown in the charts entitled, "Employment Trends in Canadian Industries" and "Regional Employment Trends".

There are several methods whereby these adjustments can be made. The one used in this case is outlined below.

First, a 12-month moving average was computed from the original indices. This moving average was then centred by means of a 2-month moving average computed from it. This step was based on the assumption that the length of the seasonal period movement is 12 months. In general, this assumption is correct.

Second, the original employment indices were expressed as percentages of the appropriate centred 12-month average. Percentage deviations were computed rather than numerical deviations because inspection of the original series showed that since 1939 there have been very extensive cyclical movements. If numerical deviations were used as the basis for determining the seasonal pattern, this wide cyclical movement would tend to distort the pattern obtained. Percentage deviations are not distorted in this manner to nearly so great an extent.

Third, the percentage deviations were then arrayed by months. The purpose of this step was to determine whether the seasonal pattern was relatively stable or whether it was changing over the period under consideration. This inspection showed, in almost every case, a changing seasonal pattern.

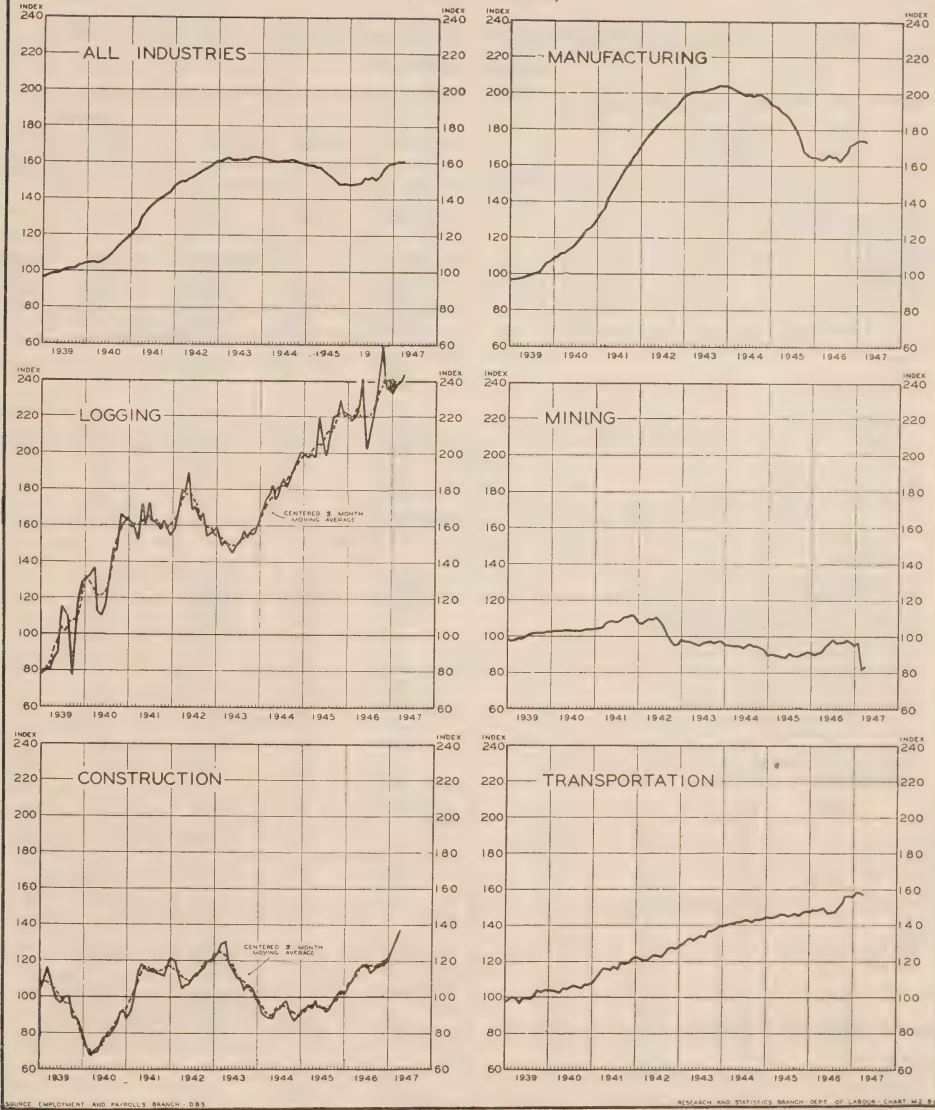

Fourth, since both the amplitude and pattern of seasonality changed considerably during the war and are still changing, it was felt that the percentage deviations should be averaged, by months, for the relatively short period of three years. These average percentage deviations were then used to adjust the original indices for the middle of the three years. In other words, the 3-year moving average seasonal pattern was used as the basis of adjustment.

Fifth, the actual process of deseasonalization was accomplished by dividing the original indices by the appropriate 3-year average seasonal index. This procedure, of course, would not apply to the most recent year. In this case, a 36-month average seasonal pattern was computed and used as a basis of adjustment for the most recent 12 to 23 months. As succeeding monthly data were obtained, the 36-month average seasonal pattern was moved ahead one month, and new indices obtained. The new indices were then used as a basis of adjustment for the most recent month only.

The general procedure, then, was to compute a 3-year moving average seasonal pattern and to use this as the basis for adjusting the original series.

In the case of two industries, logging and construction, the seasonal variations were so great and so irregular that when the original indices were adjusted in the manner outlined above, a very erratic trend was obtained. In order to depict more clearly the general movement, a 5-month moving average of the seasonally adjusted indices was computed.

EMPLOYMENT TRENDS IN CANADIAN INDUSTRIES
SEASONALLY ADJUSTED
FROM 1939 TO 1947
(AVERAGE - 1939 = 100)

of 1947, 11,000 persons had entered Canada and the number expected to arrive will show steady gains throughout the summer.

The number unplaced at employment offices fell by 30,000 during May to total 128,000 at the month-end. The decline was evident in all main occupational groups although it was somewhat more pronounced in construction, truck driving, food processing, service and

unskilled groups. At the end of May, 40,000 or 32 per cent were unskilled, 36,000 or 29 per cent were skilled or semi-skilled, 19,000 or 15 per cent were clerical and 14,000 or 11 per cent were service workers (see Table II). Of the unskilled, the largest single classified group was registered for construction while in the skilled groupings the unplaced were heaviest in transportation.

Referrals

The level of referral activity reflects the balance existing between labour demand and supply. Necessarily the geographical and occupational distribution, job requirements and wage rates, physical strength, traits and responsibilities of the jobseeker, degree of mobility of workers, and the skill of the placement officer, etc., rather than the actual numbers reported are the decisive "matching" factors. The interplay of these factors during the first five months of 1947 resulted in greater proportionate referral activity than in the corresponding period one year before. Referrals indicated only a 4 per cent decline despite a 17 per cent dropping off in applications and a 10 per cent decrease on jobs reported. In May, referrals averaged 26,087 per week, representing a 7 per cent rise during the month. The monthly gain was proportionate to the increase in jobs reported. That is, a constant ratio of 46 referrals per 100 jobs available (those on file at the beginning in addition to those reported during the month) was maintained. On

the other hand, there was a decided gain in the proportion of applicants referred to jobs. Whereas in April 32 per cent of available applicants received referral slips, by May the percentage had risen to 38.

Placements

Similar to the referral trend, placement activity had shown a much smaller proportionate drop than either vacancies or applications. During the five-month period recorded in 1947, placements showed a 3 per cent decline over the comparative months in 1946. Since a 4 per cent drop was recorded in referral activity it was evident that there had been a slight upswing in the effective referral ratio—that is, more referrals were resulting in placements.

Reports from employment offices indicated that the chief deterrent factors in placement activity were the tightening up of job specifications by employers and the "selectiveness" of applicants in certain lines of unskilled work.

Seasonal influences upped the placement activity by 6 per cent during May. The most noteworthy increase took place in mining followed by substantial upswings in construction, service and sawmill employment. The rise was general throughout the country and was common to both men and women. Average weekly placements totalled 15,762 per week as compared with 14,849 and 17,985 one month and one year before respectively.

Twelve per cent of placements were short-term, that is, of less than seven days duration. As reported in previous issues, these placements were concentrated largely in trade and services.

Movement of labour accounted for 2 per cent of placements. Although normally confined largely to the seasonal logging and mining industries, over 100 persons were trans-

ferred into textile employment. The continuing housing shortage was the main obstacle limiting transfer of help.

The following table gives the placements effected by employment offices, each year, from January 1937, to date:

Year	Placements		
	Regular	Casual	Totals
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295

1946.....	785,593	73,819	859,412
1947 (21 weeks).....	265,555	39,087	304,642

Special Placements

There has been a constantly growing co-operation received from employers in the absorption into employment of physically handicapped personnel. To date placements had averaged a 38 per cent gain over 1946 and the spread was widening in the latest recorded period. From April 15-May 14 placements totalled 1,414 in comparison to 1,269 and 1,109 one month and one year before respectively.

Many offices were reporting that those on file were narrowing down to very seriously impaired cases or over-age applicants having little training in any specific line of work.

By the mid-May date the unplaced had fallen to a new all-time low (4,938); this represented 3 per cent of the total unplaced at that date.

The work of the Employment Service in guiding youths into gainful employment was progressing favourably during May. Applications from youths registering for work were supplemented with information from school records in order to exact the most selective placing. Job opportunities, in all except chronic unemployment areas, appeared to be excellent.

Executive and Professional Offices

Placement of executive and professional personnel during May reached the highest peak since the beginning of 1946, excepting the month of February in the current year. This upswing reflected the absorption of university graduates at the termination of the spring semester. Engineering graduates were in great demand, but because of the limited number completing their courses, many orders remained unfilled. Fewer vacancies existed for the general Arts and Commerce students with many of these students getting appointments through personal contact. Placements during May averaged 69 per week as compared with 61 in April.

Many of the orders on file required personnel of exceptional ability, with both

diversified experience and scholastic background; they were also expected to be in the younger age bracket. Applicants presently unemployed tended to be beyond 45 years of age and limited in practical experience. At the end of May, 2,297 applicants were unplaced while vacancies available numbered 1,720.

Gainful employment for the summer months was found for practically all undergraduates, with the aid of the E & P and local offices. Applied and practical science students were able to secure employment in their chosen line of work while those in the more general courses usually accepted job opportunities offering good wages.

Veterans

Applications.—The steady reduction in applications evident in the general field was not shared by veterans. Veteran applications during the last three months had remained relatively stable in contrast to the general experience of an eight per cent decline elsewhere. This contrasting upward movement largely reflected the influx of veteran students at the close of the university year. An average of 7,430 applications were received from veterans each week in May.

Placements.—With a greater proportion of veterans available at employment offices, placements showed a markedly greater percentage rise than in the general field. Placements rose by 13 per cent to total 4,380 per week during May.

Dual Service and World War I veterans received more appointments in May than were recorded in any month during the past year. This remarkable account, in the face of the declining rate of demobilization, indi-

cated the great success achieved by the public campaigns launched on behalf of the older veteran.

Special Placement officers and Casualty Rehabilitation officers continued to devote special attention to the selective placing of physically impaired veterans. Employers generally showed great willingness to accept amputation cases but were sometimes more reluctant to employ persons with less visible forms of handicaps. From April 15 to May 14 placements totalled 692, the annual high to date.

Unplaced Applicants.—Veterans, registered as unplaced at N.E.S. offices, fell by 14,000 or 27 per cent during May. Sharp reductions took place in practically all centres, with the exception of certain university cities.

The duration of registrations for work also indicated a decided drop. Whereas at the end of April 77 per cent of the unplaced had been registered for more than two weeks, one

month later the percentage had fallen to 73. A heavy proportion of the "long-term" unplaced ex-servicemen were in the Halifax centre where 6,080 had been seeking work for more than two weeks. This was indicative

of the chronic unemployment problem existent in that area. Centres reporting more than 2,000 in the "15 days or more" unplaced group were: Vancouver (3,205); Winnipeg (2,749); Saint John (2,452); Montreal (2,398).

Regional Analysis

The following regional analysis is based on reports received from National Employment Service offices throughout the country. The report covers the month of May, 1947.

Maritime Region

The seasonal upswing in employment activities materialized and gradually gained momentum throughout the period. The settlement of the coal strike and the subsequent return to work of 13,000 miners will be reflected in all industries.

Agriculture.—The continued wet weather resulted in hardly 50 per cent of the yearly seeding being completed. Only the advent of more favourable weather will save the crops.

A serious shortage of farm help had developed in the dairying counties. This was attributed to the long hours and competition of the logging industry which offered higher wages on a year round basis.

Logging.—With the exception of the year round operations, the lumber cuts had been completed. Heavy rains provided ideal water conditions for the drive. It was estimated that a record drive would be established.

Fishing.—The fishing industry returned to normal after months of idleness due to strike action. Salmon fishing in New Brunswick was reported to be good. Offsetting this gain was the report that poor catches and low prices had had an adverse effect on lobster fishing around Prince Edward Island.

Mining.—About 1,000 coal miners had gone back to work in the Minto area and the Intercolonial Coal Co. mines.

Negotiations were still going on at the Dominion Coal Co. mines and it was expected that a settlement would be effected shortly.

Manufacturing.—Sawmills were operating at full capacity and mill workers were being affected by steady employment during the season.

Processing plants at Halifax were busy and had placed orders for more fish cutters and packers; canneries were only working about half-time. Many fishermen were salting their fish.

Foundries, steel plants and textile mills were operating at a high level although some-

what hindered by the prevailing coal strike. The Eastern Car Co. of Trenton was preparing to start on a 250 car order for the Canadian National Railways which will enlarge the number on the payroll.

Brick and tile plants were operating full time but were unable to keep up with the demand for this product.

The Halifax shipyards were maintaining a steady level of employment. Yards engaged in building wooden craft were busy on fishing and small boats.

Construction.—Building was one of the few bright spots for employment. Despite unfavourable weather and material shortages, road improvements and general construction were progressing. The lack of housing accommodation was hindering the transference of workers from one locality to another.

Highway construction and street repair were in progress in the Halifax, Moncton and Cape Breton areas. Labour turnover was high as few men with sufficient skill were applying for this work.

Tenders were called for a two million dollar expenditure for the extension of runways at the Moncton airport. This will be a severe drain on the local labour supply.

Transportation.—Ballasting operations on the Canadian National Railways were well underway with an ample supply of labour to meet requirements.

The closing of the port season at Saint John and Halifax forced unemployment among waterfront workers. Freight train crews had also been reduced due to the decreased flow of material. These men were then available for summer employment.

Quebec Region

Persistent rain and flood conditions in May further delayed agriculture and construction activity throughout the province. Manufacturing remained at a high level while expansion projects were retarded by the shortage of material, machinery and housing accommodation.

Agriculture.—The outlook for agriculture was not promising as seeding was already a month late in most areas. As the ground was still flooded in some places little hope was held for prospective crops.

The Polish veterans were proving to be a great asset in strengthening the farm labour situation.

It was expected that workers for thinning the sugar beets would be recruited from the urban centres.

Logging.—During the first two weeks in May there were approximately 20,000 men in woods operations. The work was being held up to some extent by snow and floods but by the middle of the month driving operations had started. Operations will be prolonged as much extra work will be involved in refloating logs which were driven from the main course by the flood waters.

Mining.—Renewed activity in northern mining fields was being met by an adequate supply of workers. Gold mines reported that new fields were being opened up and others extended.

Drilling crews have been flown in to the Hollinger and Labrador M & E Co. properties. The Government authorization of the Quebec North Shore and Labrador Railway Company Bill would be a great factor in the opening up of this area.

The Canadian Johns-Manville in Asbestos had been successful in getting some much needed help in Quebec City and was planning on seeking help in other Quebec cities.

In the Gaspé area the former oil workings should be reopened.

It was expected that the demand for miners and beginners will be a heavy one and efforts were being made to have an adequate supply of workers available.

Fishing.—Fishermen were busy along the Gaspé Coast with lobster, salmon and herring fishing.

Cod fishing had been delayed because of bad weather but was expected to begin about the second week in June. At that time the fleet will consist of about 1,500 boats and 4,000 men.

Manufacturing.—General industrial activity did not change appreciably from that reported for last month. Iron and steel industries continued to push forward, reporting an adequate supply of raw materials. However, companies engaged in the fabrication of structural steel, engines and other machinery were experiencing an acute shortage of skilled tradesmen.

Unsettled labour conditions and a shortage of material had a retarding effect on the leather industry in the Quebec and Chambly areas while labour scarcity was the deterrent factor in Valleyfield shoe factories.

Workers for textile mills were in short supply. A campaign to recruit female help

in Quebec City for the Dominion Textile Mills was met with some success. The low starting rate plus uncertain housing conditions, however, made workers generally unwilling to move to textile centres.

Construction.—This industry steadily improved and had drained all available labour sources. However, contract awards showed a decline and it was expected that the 1947 total would not exceed that of 1946 as had been expected. Skilled craftsmen were already difficult to obtain and it was predicted that all tradesmen would be employed by the end of June.

With a budget of \$24,000,000 for road construction, the largest amount in the history of the Province, skilled and unskilled workers will be in heavy demand. Work had started on an asphalt road through the Laurentide National Park and on sections of a roadway in the Gaspé Peninsula.

There was almost a complete halt in residential construction, the investor biding his time until costs were more stable.

A heavy commercial construction program was underway, headed by a \$500,000 structure for the International Harvester Co. of Canada. Preliminary work had started on the Belmont Street Bridge in Montreal and large additions to the textile plants in Drummondville and Grand Mere. Laval College was erecting an addition costing \$175,000 and the town of Rouyn was building a \$150,000 school.

The scarcity of skilled help and material hampered shipbuilding at many points.

Work on the 300 miles of Canadian National Railway line being laid this summer in the Abitibi area was proceeding rapidly.

Transportation.—It was hoped that the partial delivery of the 6,200 box car order will avert a repetition of the bottleneck experienced during the preceding winter months.

Bus traffic had been stepped up and several new runs inaugurated.

Ontario Region

The scarcity of skilled labour was a shadow on the face of increased activity. The upswing, however, was somewhat modified by the prevailing cold weather and material shortages.

Agriculture.—Throughout a large part of the province, prospects for field crops were uncertain. Wet weather had kept the farmer off the land. This delay resulted in only 50 per cent of the usual crop of oats and barley being sown. Shortage of these feed grains will undoubtedly result in a lower production of live stock and will lessen, to some degree, the demand for year-round farm labour.

Logging.—River drives progressed favourably although high water made sweeping difficult. In two districts operators resorted to hot-logging in order to get additional raw material to the mills.

Pulpwood cutters were still needed. Mills in the Hearst area received a group of men from Nova Scotia to fill their vacancies.

Mining.—Mine operators have placed orders for all types of workers, experienced and inexperienced—they were willing to accept all who were physically fit. It was expected that requests for mine beginners will increase in the near future.

Non-metallic mines were operating at full capacity with no serious labour trouble.

Manufacturing.—Activity in this field was at a much higher level with approximately 30,000 more persons engaged in it than at this time last year. Seasonal movements to outdoor jobs had further increased the number of job opportunities for inside work. The failure to make more placements was linked with the prevailing shortage of houses in most industrial centres.

Isolated cases were reported of a few plants where operations had been curtailed due to over-production. These included some manufacturers of aluminum products and nylon yarns. However, these workers were being readily absorbed.

Producers of grey iron soil pipe had inter-regional clearance orders to the Maritimes for foundry labour. Over 200 of these workers had already been brought to a farm implement manufacturer in Brantford and were being housed in former R.C.A.F. buildings there.

The moulder situation was critical in Toronto plants. Some transfers from the Maritimes were effected. The Dominion Steel and Foundry, Toronto, had secured their first applicant in response to an extensive advertising program in Great Britain.

Electrical plants reported an improvement in the basic material supply and additional workers were being taken on daily. The settlement of the strike at the Moffat Stove Co., Weston, will put approximately 650 workers on the production of stoves, radios and refrigerators.

The manufacture of furniture was showing a general slackness due to the lack of experienced workers and the lessening of consumer purchases.

Sharp increases in rubber plant vacancies had appeared both for skilled and unskilled workers. Importation was suggested but the local housing situation presents a hindrance. One centre had arranged for a private bus to transport workers from a neighbouring town.

The textile industry experienced a high rate of labour turnover with orders for workers showing a marked increase. Some factories, however, were reducing their hours due to shortage of material or over-production. This situation was also true of shoe manufacturing.

Some firms were employing students after school and on Saturdays so as to train them for full-time employment during the summer months.

Construction.—Weather conditions permitted greater activity and as a result, available help decreased rapidly. Rising cost of material and labour reduced home building and to a lesser degree industrial construction in some quarters. Nevertheless, booms were in evidence in such force as would indicate an unprecedented labour shortage. Public work projects, dormant during the war, promised to further aggravate the situation.

Citing only a few of the highlights in this program, Ottawa estimates an expenditure of \$3,000,000, Peterborough \$2,000,000, and Hamilton \$1,300,000.

Power and highway projects in the North Bay area were absorbing all available help.

Transportation.—Seamen's sections in lake-port offices have had no difficulty in supplying crews for the ships.

Railways continued to place orders for section and extra gang workers, but generally, gangs were well supplied with help. Students helped fill vacancies.

Highway transportation and airway needs were at a low ebb.

Prairie Region

Activity was brisk in this region with a fair supply of available labour. Even with the few seasonal lay-offs, forecasts for the near future were very promising.

Agriculture.—Despite the late spring, seeding had been completed. The severe frost damage done to the flax in Southern Alberta resulted in an almost total loss of the crop.

Orders were still being received for Polish veterans. The large group which arrived this month were referred to the sugar beet associations. Even with their help the Manitoba Sugar Co. was seeking weeders and thinners.

Logging.—Experienced plupwood cutters were in heavy demand at the Lakehead. However, no labour difficulties were anticipated as wages this season were very attractive.

Mining.—The opening of navigation brought renewed activity to the base metal mines in the Steeprock area.

Gold mining was on the upgrade. Experienced miners and muckers were needed to push production forward.

Coal mines in many districts were operating on a part-time basis, but were expected to revert to full production in July. Housing accommodation hindered expansion at some sites.

Certificated miners were required at all points.

Manufacturing.—Although there had been no production to date, Imperial Oil had had good results from the seven wells being drilled at Leduc.

Meat packing plants reported a shortage of livestock shipments and an early summer lay-off was expected. Canning plants were conditioning machinery for the summer run and had placed advance orders for workers.

Men will be required in greater numbers in sawmills and pulp and paper mills as logs arrive from the bush. One large planer mill estimated that they would process the winter cut in 8 to 10 weeks.

Brickyards were at full production—some were working a night shift to meet the demand for this commodity. Other manufacturers of building material were working at capacity.

Steel foundries were having difficulty in filling their orders due to a shortage of skilled and unskilled workers.

Construction.—The peak of construction which had been anticipated did not materialize. This dropping off was most noticeable in the number of permits being granted for private homes. The lack of space for expansion caused industry to proceed with building in the face of increased costs.

Public works programs were not large and there was a tendency to confine expenditures to maintenance and repairs.

Varied types of labour were required but the main demand was for skilled carpenters, bricklayers and structural steel workers.

One of the chief deterrents was the inability to secure the services of contractors.

Some road building and development projects were outlined for the summer, the largest being the drilling of a tunnel south of Lethbridge. Once the tunnel is completed work will begin on what is expected to be the largest earth-filled dam in Canada. Labourers and operators of earth moving machinery will be in great demand.

Transportation.—Shipping at Lakehead ports was in full swing. The Canadian Pacific Airlines inaugurated a daily passenger and mail service from Winnipeg to the northern town of Flin Flon.

Pacific Region

The general employment picture continued to show rapid improvement with great reductions being made in the number of persons seeking jobs.

Agriculture.—Strawberry picking was at its peak with an adequate supply of workers to meet the demand. The local pickers were reinforced by some 350 women from the Prairie Region. Indications pointed to an abundant raspberry crop which was expected to result in more than the usual demand for workers.

There was a decided shortage of year round farm help due to the unattractive wages being offered.

Logging.—Due to uncertain labour conditions workers were reluctant to go to the camps—many already there were leaving. It was expected that once a new agreement was completed the good wages offered would attract the necessary workers.

Operations had been temporarily stopped at several camps for fear of bush fires which might result from the prolonged dry spell.

Mining.—There was an increasing demand for both certificated miners and labourers but the critical housing situation was hindering the transfer of workers from one mining camp to another. However, mines in the Fernie area were offering a limited amount of accommodation and so have been receiving applicants.

The quartz mining section of this industry continued to be exceedingly short of miners and timber men. The filling of this need would provide many employment opportunities for persons of lesser skills.

Gold placer mining was moving forward, due to the establishment of a more favourable wage scale.

Base metal mining was experiencing some difficulty in obtaining sufficient help. This would be further aggravated if the proposed plan of a seven day week was accepted, which would mean a 25 per cent increase in mining and milling crews.

University students were being readily absorbed.

Manufacturing.—Until this time, the demand for workers in sawmills had been easily met with the exception of certain skilled craftsmen. However, it was thought that a serious shortage would materialize when some 40 sawmills, which were then idle in the Prince George area, commenced operations.

The present shortage of raw materials was having a slowing up effect on box shoo production, but it was not expected that it would reach a critical stage due to the anticipated 30 per cent decrease in the apple crop.

Shipyards continued to be busy on repair and regular overhaul work—many of them reporting a full program which would carry them well into 1948. Progress was slow in several areas because of material shortages.

Construction.—All areas within the region, with the exception of Prince Rupert, reported an active building season accompanied by a shortage of workers. The most acute scarcity was felt in Prince George which was experiencing the largest building boom in its history. Vernon was striking at a 90 house project while the Mission area had a \$600,000 industrial and service building project underway.

Construction was relatively quiet in Vancouver and Victoria. The building of low cost homes was falling off, and efforts were turned towards large industrial construction projects.

Highway work was progressing at both ends of the Hope-Princeton Highway. The Pine Pass Highway at Prince George expected to increase their present crew of 850 workers to 1,400 shortly.

Transportation.—The opening of the tourist season saw all coastal passenger vessels completely manned. However, other ships were having some difficulty in signing on certificated personnel, particularly engineers and seagoing cooks.

Track maintenance workers continued to be in short supply.

Strikes and Lockouts

Strikes and Lockouts in Canada during June, 1947

THE time loss due to strike activity in Canada during June, 1947, showed a decline of about 200,000 days as compared with the previous month, and by more than 765,000 days as compared with June, 1946. There was also a substantial decline in the number of workers involved in strikes, both as compared with the previous month and with June, 1946. The demand for increased wages was the principal cause of 25 of the 31 strikes in June, 1947. Preliminary figures

for June, 1947, show 31 strikes and lockouts in existence, involving 17,201 workers, with a time loss of 166,370 man-working days, as compared with 43 strikes in May, 1947, with 34,013 workers involved and a time loss of 365,424 days. In June, 1946, there were 36 strikes, involving 70,600 workers, with a time loss of 933,876 days.

For the first six months of 1947 preliminary figures show a total of 107 strikes and lockouts, involving 45,361 workers, with a time

* Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

loss of 1,501,935 man-working days. Three strikes of coal miners in Nova Scotia and New Brunswick were responsible for more than 86 per cent of this time loss. During the same period last year there were 127 strikes, with 94,011 workers involved and a time loss of 1,622,745 days.

Of the 31 strikes recorded for June, two were settled in favour of the workers, four in favour of the employers, nine were compromise settlements and five were indefinite in result, work being resumed pending final settlement. At the end of the month 11 strikes were recorded as unterminated, namely: vegetable products factory workers, Port Credit, Ont.; textile factory workers at Lachute Mills, P.Q.; paper products factory workers at Chambly, P.Q.; wood products factory workers at Lachute Mills, P.Q.; metal factory workers at Ottawa, Ont.; truck

drivers at Windsor, Ont.; textile factory workers at St. Johns, P.Q.; furniture factory workers at Hanover, Ont.; fireclay products factory workers at Acton, Ont.; bus drivers at Sydney, N.S.; and laundry workers at Nanaimo, B.C.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., which commenced May 30, 1946, are still continuing. A strike of food products factory workers at Vancouver, B.C. has not been declared terminated.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1947⁽¹⁾

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars ⁽²⁾

TRANSPORTATION— Other Local and Highway— Bus drivers, Sydney, N.S.	1	44	100	Commenced June 27; against dismissal of eight drivers for allegedly collecting fares improperly; un-terminated.
Water— Freight handlers, Cap de la Madeleine, P.Q.	1	56	86	Commenced June 17; for increased wages and against piece-work rates instead of hourly rates of pay; terminated June 18; negotiations; compromise.
SERVICE— Public Administration— Civic labourers, Duncan, B.C.	1	7	10	Commenced June 12; for increased wages; terminated June 13; return of workers and replacement; in favour of employer.
Business and Personal— Hotel employees, Moose Jaw, Sask.	1	46	250	Commenced June 7; for a new agreement providing for increased wages; terminated June 12; conciliation, provincial; compromise.
Laundry workers, Nanaimo, B.C.	1	28	490	Commenced June 9; against dismissal of two workers for being absent without leave; un-terminated.
Dry cleaners and dyers, Sudbury, Ont.	1	(5)10	10	Commenced June 9; against dismissal of a worker for infraction of company rules; terminated June 10; negotiations, and return of workers pending reference to Ontario Labour Relations Board; indefinite.

(1) Preliminary data based where possible on direct reports from parties concerned; in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(3) 500 indirectly affected; (4) 20 indirectly affected; (5) 8 indirectly affected.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing up to date that given in the March, 1947, issue in the review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the countries for which such figures are available. Statistics given in the annual review and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The *British Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in April, 1947, was 207 and 18 were still in progress from the previous month, making a total of 225 during the month. In all stoppages of work in progress in the period there were 61,200 workers involved and a time loss of 235,000 working days was caused.

Of the 207 stoppages which began during April, 11 arose out of demands for advances in wages; 77 over other wage questions; five

on questions as to working hours; 34 on questions respecting the employment of particular classes or persons; 76 on other questions respecting working arrangements; two were on questions of trade union principle, and two were in support of workers involved in other disputes.

India

Figures now available for the year 1945 show 820 work stoppages with 747,530 workers involved and a time loss of 4,054,499 man-days.

New Zealand

Figures now available for the year 1946, show 97 strikes, involving 15,696 workers with a time loss of 30,393 working-days.

United States

Preliminary figures for May, 1947, show 425 strikes and lockouts beginning in the month, in which 200,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 5,700,000 man-days. Corresponding figures for April, 1947, are 460 strikes and lockouts, involving 600,000 workers with a time loss of 7,750,000 days.

Prices

Prices, Retail and Wholesale, in Canada, June, 1947

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics cost-of-living index for Canada, on the base 1935-39=100, advanced a further 1.8 points to 134.9 between May 1 and June 2, 1947. Higher food prices continued to dominate the advance, the food index moving up 2.8 points to 157.7. Principal items to show increases were butter, eggs, potatoes and cabbage. Among other groups, rentals rose 2.4 points to 117.8, clothing 2.4 to 142.4, homefurnishings and services 1.2 to 139.8, fuel and light 0.5 to 116.7, and miscellaneous items 0.3 to 117.1.

Cost of Living in Eight Cities

Cost-of-living indexes for eight regional cities all moved higher between May 1 and June 2, 1947. Composite city index changes were as follows: Toronto 2.1 points to 133.3; Edmonton and Vancouver each 1.7 to 131.3 and 134.3 respectively; Halifax 1.6 to 131.0; Saint John 1.5 to 132.1; Montreal 1.3 to 137.7; Winnipeg 1.3 to 129.7, and Saskatoon 1.1 to 136.2.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada, at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices were not warranted, although chain store prices are used in the calculation of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the

provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail price of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is included in Table I.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expenditure was \$1,413.90 divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.59; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other

(a) First of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) New wartime price series on base December 1942=1000, computed quarterly beginning March, 1943. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised. (j) From August, 1945, "Consumers Price Index for Moderate-Income Families in Large Cities".

CHANGES IN COST-OF-LIVING INDEX NUMBERS, FIRST QUARTER OF 1947

Country	Percentage Change		Principal Group Changes
	March, 1947 August, 1939	March, 1947 December, 1946	December, 1946—March, 1947
Canada.....	+ 27.9	+ 1.4	Increases: homefurnishings, foods.
Czechoslovakia.....	+201.1 (a)	+ 1.3	Increases: rent, foods. Decreases: clothing.
Iceland.....	+201.0	+ 1.3	Increases: foods.
Mexico.....	+195.3	— 1.1	Increases: clothing. Decreases: soap and fuel, foods.
Newfoundland.....	+ 60.5	+ 1.9	Increases: foods, clothing.
Norway.....	+ 59.5	— 0.3	Increases: miscellaneous. Decreases: clothing, foods.
Peru.....	123.7	+ 6.4	Increases: foods, clothing.
Union of South Africa.....	+ 39.6	+ 2.7	Increases: foods.
United Kingdom.....	+ 31.6	0.0	Increases: foods, fuel and light. Decreases: clothing.
United States.....	+ 58.5	+ 2.0	Increases: clothing, housefurnishings, foods.

(a) Increase over year 1939.

CHANGES IN WHOLESALE PRICE INDEX NUMBERS, FIRST QUARTER OF 1947

Country	Percentage Change		Principal Group Changes
	March, 1947 August, 1939	March, 1947 December, 1946	December, 1946—March, 1947
Argentina.....	+137.0	+ 1.4	Increases: non-farm products. Decreases: farm products.
Canada.....	+ 66.5	+ 7.5	Increases: non-ferrous, fibres, wood.
Czechoslovakia.....	+174.3 (a)	— 0.1	Decreases: food products, textiles.
India (Calcutta).....	+270.0	+ 0.8	Increases: raw jute, hides and skins. Decreases: tea, textiles, raw cotton.
Mexico.....	+136.3	— 2.6	Increases: construction materials, power. Decreases: foods, household articles, clothing.
Peru.....	+169.6	+ 17.5	Increases: building materials, metals, foods.
Sweden.....	+ 76.6	+ 2.1	Increases: chemicals, vegetable products. Decreases: animal products.
Union of South Africa.....	+ 66.5	+ 0.5	Increases: metals, dairy produce. Decreases: grain, meal and potatoes.
United Kingdom.....	+ 87.2	+ 2.1	Increases: non-ferrous metals, chemicals and oils, miscellaneous foods and tobacco.
United States.....	+ 99.3	+ 6.1	Increases: building materials, farm products, foods. Decreases: hides and leather products.

(a) Increase over year 1939.

expenditure not directly represented in the index brought the total family living expenditure to \$1,453.80.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527 became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the *LABOUR GAZETTE* under the title *Price Control in Canada*.

Wholesale Prices, May, 1947

Further substantial increases in wholesale prices in May were reflected in a gain of 2.4 points to 125.3 in the general wholesale price index, which is on the base 1926=100. Since the beginning of the year there has been a gain of 11.1 points in this index or 9.7 per cent. Among particular groups of the index, wood, wood products and paper rose 7.2 points to 161.0, largely due to advances in

fir, cedar lumber and groundwood pulp. Animal products prices moved up 3.5 points to 128.0, reflecting increases for butter, canned milk, eggs and livestock. Strength in the non-metallic, group index, which advanced 3.1 points to 111.4, was due to higher prices for imported bituminous and western domestic coal, manufactured gas and asbestos mill-board and pipe covering. Raw wool and wollen cloth advances were responsible for a gain of 2.7 points to 123.9 in the textile group while strength in rye, potatoes and onions was responsible for a gain of 0.8 to 111.4 in the vegetable products group. Bananas, oranges, lemons, raw rubber and rosin were lower in this group in May. Chemicals and allied products held unchanged at 103.9 while one group, non-ferrous metals, registered a decline from 115.8 to 115.1 due to weakness in silver quotations. The monthly index of Canadian farm product prices at wholesale rose a further 1.6 points to 118.5 between April and May. Both sub-groups were higher, field products advancing 1.9 points to 103.6 due to firmer quotations for rye, potatoes and onions. In the animal products sub-group higher prices for livestock and eggs were sufficient to move the index up 1.0 to 143.4.

Publications Received in Library of Department of Labour Ottawa, Quarter Ending June, 1947

THE publications listed below are not for sale by the Department of Labour, but may be obtained on loan, free of charge, upon application to the Librarian, Department of Labour, Ottawa. Inquiries with respect to purchases should be directed to the respective publishers.

Workmen's Compensation in British Columbia and Ontario

British Columbia

THE thirtieth Annual Report of the Workmen's Compensation Board of British Columbia for the year ended December 31, 1946, states that the number of firms engaged in operations within the scope of the Act at the close of the year was 13,762 as compared with 9,361 a year earlier. The great increase in the number of employers is attributed largely to the extension of the benefits of the Act to industries or occupations not covered in previous years. These included under certain conditions the following: "operating a catering business, hotel, beer parlour, apartment house, commercial building, retail store, the business of land surveying, auctioneering, operation of a private school, private club, nursing home, veterinary hospital, dental laboratory, barber shop, hair-dressing establishment or beauty parlour, photo taking or photo printing shop, stockyard, land clearing, landscape gardening or other gardening as an industry (exclusive of market gardening), operating a horticultural nursery, Christmas tree cutting, distributing and servicing automatic music machines, watch repairing, broadcasting station (exclusive of players and artists) and having any employee or employees (other than members of the family of the employer) employed at such work. Other operations were brought under the Act, effective January 1, 1947."

During the year 1946, 4,897 firms recorded operations for the first time and 557 firms resumed the employment of labour under the Act. In addition, 185 employers purchased optional protection for their employees. On the other hand, 1,178 employers ceased to employ labour under the Act and 60 other employers discontinued buying optional protection. The net increase in the number of employers during the year was 4,401.

Concurrently with the increase in the number of workmen protected under the Act there was an increase in the number of accidents recorded. There were 59,947 accidents reported to the Board in 1946, an increase of 4,093 over the previous year. Of the total recorded, 191 proved fatal—a reduction of 22 from the year 1945. Awards were made during the year to 1,113 workmen who had suffered permanent partial or permanent total disabilities, bringing the total awards for permanent impairment in 30 years to 20,685. At the end of 1946, there were, 4,997 workmen in receipt of regular monthly payments for permanent impairment sustained by accidents and industrial diseases in previous years. As

a result of fatal accidents and industrial diseases, pensions were being paid, at the end of 1946, to 1,277 widows, 801 children, 165 dependent mothers, 42 dependent fathers and 24 other dependents.

The total estimated payrolls of employers upon whom assessments were levied in 1946 was \$415,000,000, as compared with audited payrolls for 1945 of \$383,734,401.

The report contains a tabular analysis of 29,691 claims on which time-loss payments were made in 1946. Of these claims, 17,759 were made by married persons, 11,007 being single persons and in 925 cases the conjugal state was unknown. The total wage loss sustained by the 29,691 claimants was \$6,275,721.51; the average length of disability for all classes was 39 days, and the average weekly wage for all classes was \$37.31. The total number of work days lost was 778,245. Of the total number receiving compensation benefits, 1,667 received other insurance benefits.

Accident Prevention

The educational campaign in accident prevention was maintained in 1946. Some 275,000 copies of the 1945 revision of the Accident Prevention Regulations were distributed to workmen. Informative booklets and circulars were sent to employers at regular intervals to the extent of 175,000 copies. In addition, there was a constant flow of warning notices and placards sent to new firms, and to others requesting such material, for posting on bulletin boards. A special booklet was issued designed to forestall as far as possible any unfavourable accident experience that might occur during the transition period following the end of the war. Some 15,000 copies were sent to interested persons.

What was considered to be one of the most important steps taken by the Board in the educational and publicity field was the inauguration of a safety poster service. In response to numerous requests from management, the Board organized facilities to present the most suitable materials in a forceful manner. It is reported that the increasing demands for this service indicate its effectiveness in focussing attention on the control of hazardous conditions and practices.

Rehabilitation Program

Physiotherapy continued to form a vital part of the rehabilitation program. Instead of waiting until after other treatments had

been completed, workmen were referred to the rehabilitation centre at a much earlier stage in the period of their convalescence. During 1946, 152,818 treatments were given. For each working day the centre was open, 352 workmen received one or more treatments. In addition, 442 workmen received occupational therapy. Then too, 3,820 workmen were interviewed during their convalescence to ascertain their requirements with respect to rehabilitation. Of the 336 cases (including 111 similar cases carried over from 1945) in which assistance was indicated, 199 were rehabilitated. Awards were made for permanent partial impairment to 128 and 71 others desired a change of occupation. Of the 199 workmen rehabilitated, 42 were placed with former employers and 157 others went to new employers. Four injured workmen took industrial first-aid courses, three of whom had continued in that work. Eighteen others took training in high school or business college, twelve of whom have been given employment at the new work for which they were retrained. It is reported that rehabilitation work was curtailed to some extent by shut-downs in some industries during the year.

Time-Loss by Industry

The percentage of accidents which resulted in three or more days time-loss during the year was distributed as follows: lumber industry, 35 per cent; construction, 33 per cent; general manufacturing and delivery, 19 per cent; metal mining and smelting, 5 per cent; navigation and wharf operations, 4 per cent; coal mining, 3 per cent; railway groups, 3 per cent; all other classes, 11 per cent.

Ontario

THE report of the Workmen's Compensation Board of Ontario for 1946 states that there was an increase of payroll, accidents reported, and compensation awarded, each item reaching an all-time high record. The payroll covered increased 10.93 per cent, the accidents reported 17.21 per cent and the benefits awarded 25.63 per cent, over corresponding figures for 1945. The payroll in Schedule 1 (the collective liability part of the Workmen's Compensation Act) was \$1,295,400,500, in 1946, as compared with \$1,167,802,000, in 1945.

There were 138,570 accidents reported in 1946, an increase of 20,350 over 1945. During 1946 the benefits (compensation, medical aid, rehabilitation, etc.) amounted to \$16,502,023.89, as compared with \$13,135,938.38 during 1945.

Revenue

Revenue of the Board's accident fund during 1946 amounted to \$13,661,758.09, of which \$9,521,954.20 was obtained from 1946 assessments; \$838,726.41 from assessments of 1945 and prior years; and \$55,273.99 from penalties, interest, etc.; \$289,292.76 from medical aid, workmen's contributions; \$1,080,338.35 from investments and interest; \$393.55, premiums on U.S. funds; \$85,079.90, net profits from investments; \$45,771.56, Alberta talons, etc.; and bank interest and exchange, \$5,759.76. Disbursements by the Board through its accident fund totalled \$12,039,808.16 in 1946, the major component items being compensation to workmen and medical aid chargeable to classes, \$4,629,878.13; medical aid charged to firms \$2,305.60; medical aid (physicians, hospitals, drugs, etc.) \$759,583.78; physiotherapy rehabilitation department, \$96,839.03; general and administrative expenses, \$39,795.63; rehabilitation account, \$34,030.36; pension payments (less transfer from silicosis account of \$1,814.29), \$2,348,290.29; general administrative expenses, \$454,292.24, repayable advances, \$1,431.40. Investments purchased during the year, less sales at book values, \$3,673,361.70; leaving a bank balance at the end of the year of \$1,621,949.93.

Total receipts for the silicosis fund for 1946 were \$492,149.84, of which \$425,225.35 were obtained from assessments from employers and the balance from investments, interest, etc. The disbursements from the silicosis fund amounted to \$268,057.58, of which amount \$228,728.64 was for pension payments and the balance for hospital expenses and medical aid, time loss payments, funeral expenses, and general administrative expenses.

The average rate of assessment (Schedule 1) increased from \$1.12 for each \$100 of payroll to \$1.16, the increase being due to more hazardous industries being substituted for less hazardous industries in the post-war period; there was no substantial increase in rates charged the employers. At the end of 1946, there were 35,296 employers under Schedule 1, as compared with 29,039 at the end of 1945, the addition being due largely to the inclusion of industries not formerly under Schedule 1.

The compensation and medical aid for Schedule 1 industries, including estimates for what is still to be awarded for accidents happening during the year, amounted to \$13,239,244.31. There were other outlays of \$1,421,261.83, being \$680,819.16 charged for

administration expenses (including \$973 debit adjustment of prior years' expenses), \$182,066.58 for other expenses of non-administrative character, \$38,328.80 for mine rescue work, \$342,762 grants to accident prevention associations organized under the Act, \$131,371.95 for the Board's clinic, \$8,221.37 for special treatment for paraplegics, \$36,858.25 for the special arrangements with the Toronto General Hospital, \$284.12 for outlays under Section 8 of the Act and \$549.60 special expenses charged to the classes. The total expenditures and charges for the year were \$14,660,506.14.

The total amount of compensation awarded in Schedule 2 industries (those in which the employer is individually liable for accidents to his workmen) and Crown cases was \$2,345,197.61 as compared with \$2,555,764.16 during 1945. Of this \$2,345,197.61, \$1,033,962.68 was

for Dominion Crown cases and \$125,782.08 was for Provincial Crown cases.

The gross administrative expenses of the Board were \$1,019,957.68, of which \$182,066.58 was for non-administrative services, that is, those services, which, mainly medical and investigatory, are in the nature of benefits rather than administrative. The gross administrative expenses are, therefore, \$837,891.10, of which \$679,846.16 was charged to Schedule 1 and constitutes 4.80 per cent of the benefits awarded in Schedule 1.

The balance in the Pension Fund at the commencement of 1946 was \$37,295,585.05. During the year \$6,708,444.80 was transferred for pension awards, \$1,971,560.60 was added in interest and \$3,536,806.30 was paid for pensions. The balance in the fund at the end of 1946 was \$42,438,784.15.

Adult Education in Manitoba

THE Manitoba Royal Commission on Adult Education appointed by Order in Council of the provincial government in August, 1945, issued in June, a report of 170 pages covering its investigations and recommendations.

The terms of reference as defined in the Order in Council were:—

“to make recommendations to the government

“(I) outlining a comprehensive plan of adult education that would meet the needs of Manitoba today;

“(II) concerning the extent to which the federal government and the provincial government, or either of them, should engage in adult education and indicating where, in a democracy like Canada, the line between adult education and government or state propaganda should be drawn;

“(III) concerning the features of adult education carried on in the Prairie West of Canada and in the most comparable mid-west states of the United States of America, which the commission considers might be adapted to Manitoba;

“(IV) as to the manner in which adult education work in Manitoba may best be correlated with the work of rehabilitation of the Department of Veterans Affairs of Canada.”

The first members of the Commission were: Dr. A. W. Trueman, President of the University of Manitoba (Chairman); Dr. H. A. Innes, University of Toronto; Mr. John Grieson, Film Director, Ottawa; Mr. J. J. Deutsch, Economist, Winnipeg; Miss Frances McKay, Director of Women's Work, Manitoba Department of Agriculture Extension Service.

The Commission, during the course of its inquiries, held a number of full business meetings and hearings at the legislative buildings and the University of Manitoba in Winnipeg and also, a three-day session in

Ottawa. In addition, it requested written statements from some 75 adult education agencies in Manitoba.

Prefacing their recommendations, the Commissioners stated that they had attempted “to devise machinery by which the government's support to agencies concerned with adult education will not imply government control of those agencies. The government itself must be vitally concerned with securing independent criticism . . . We have pointed to the dangers of university dictation and of government dictation and to the necessity of allowing those concerned with adult education to work out their own solutions.” They point out that “a list of agencies concerned with adult education will show a wide divergence of interests. These reflect in part the limitations of a formal education as felt by individuals in the community . . .”

It is claimed further, that “the fostering of the importance of a wide divergence of interests is a basic consideration in the generous support of the government to the furtherance of adult education.”

Recommendations

The Commission recommended that the province take fuller advantage of Dominion legislation which would aid provincial educational projects with a view to extending adult education programs, if and when provincial funds are available. In addition, the Commission is of the opinion that the government should “strive to secure maximum efficiency in the educational aspects of the work of each provincial government department concerned,” and also that “it is the function of govern-

ment to provide financial support for adult education, without interfering in any way with the educational policies of voluntary agencies."

It is urged that the educational work of all government departments, specifically those of Agriculture, Education and Health and Public Welfare, in so far as they relate to adult education, should be carefully co-ordinated. While admitting that individual government departments must have "a certain degree of independence and autonomy," administrative machinery is required to make possible an interchange of ideas and a joint planning of programs.

With respect to the University, the Commission feels that the present faculty committees should be replaced by a department of extension. Further, it is held that "the University should exercise important influence through representation on councils and committees set up for the co-ordination of the educational efforts of voluntary and government agencies." It is pointed out, however, that as the University is an autonomous body, it must assume the responsibility for the part it will play in adult education. This "might involve greater emphasis in the undergraduate classes on the responsibility of university graduates for taking part in the educational activities of the community."

The Commissioners urge "the necessity of supporting the efforts of the voluntary agencies at every turn, since the vital work in adult education must be done by them." It is

asserted that the wide diversity of adult education agencies "implies an organization which would enable them to work out their own problems and the problems of adult education as a whole." To facilitate that, it is suggested that "a conference be called with a view to setting up a constitution and machinery for the continuous sustained discussion of problems of adult education."

Two types of administrative machinery are suggested to co-ordinate the roles of government, university and voluntary agencies. The first is an interdepartmental advisory committee of five to include the deputy ministers (or their representatives) of the Departments of Agriculture, Education and Health and Public Welfare, the Director of the Adult Education council and a university official. The latter two would serve ex-officio and the Chairman to be the Deputy Minister of Education.

The Commission recommends that the government take the initiative in organizing a conference of representatives of all voluntary adult education agencies to discuss ways and means of establishing an effective central council. Suggestions are made concerning a constitution for the central council, including the election and duties of a director and an executive board; methods of raising and allocating funds; provision for regional libraries for both books and films; and machinery for the collection and disposition of data, specifically with respect to handicrafts and handicapped groups.

Labour and Industry in Nova Scotia

THE annual report of the Nova Scotia Department of Labour for the fiscal year ending November 30, 1946, states that the index number of reported employment for November 1, 1946 was 192.7, compared with 193.6 for the same date in the preceding year. A large factor in this decline was a substantial decrease in the iron and steel industry, the employment index for which fell 41.9 points. Gains were registered in other parts of the manufacturing group; employment in construction, retail trade and mining also showed advances.

The number employed in industries in Nova Scotia, at November 30, 1946, as reported by establishments with 15 or more employees, was 81,259, with aggregate weekly payrolls of \$2,521,143. This represented an increase of 3.9 per cent in employment and 6.1 per cent in payrolls over the previous month's figures. For

the preceding twelve-month period, however, there was a decrease of 60 in reported employment.

In the coal mines, the average daily work force was 13,347, compared with 12,533 in 1945 and the total shifts worked were 3,292,541, an increase of 9,149 over the previous year.

Strikes and Lockouts.—During the year ending November 30, 1946, there were 39 strikes with a time loss of 334,649 man-working days. The comparable figures for the preceding fiscal year were 32 strikes with a time loss of 34,913 days. The nation-wide steel strike was the major industrial disturbance of the year and accounted for an estimated time loss of 290,000 man-working days in Nova Scotia. Of the work stoppages in 1946, 12 were for one day or less, 16 lasted from one day to five and 13

for five days or more. The total number of workmen involved in all stoppages was 18,491.

During the year the Nova Scotia Wartime Labour Relations Board dealt with 48 applications under the Wartime Labour Relations P.C. 1003. In addition, seven applications were withdrawn and 14 applications were pending decision of the Board at the end of the fiscal year. A conciliation officer was successful in resolving two of the three cases for conciliation. In the third case the conciliation officer recommended the appointment of a Board of Conciliation. Under the auspices of that Board a collective agreement was executed successfully. Industries covered by applications to the Board included fishing, ship repairs, garage operations, laundries, municipal employment, hotel and other services, textiles, breweries, basic steel, and construction.

Amendments to Legislation.—Changes in the Workmen's Compensation Act raised from \$100 to \$150, the maximum amount payable for funeral expenses; provided for payments up to the age of 18, in respect of a child whose education should, in the opinion of the Board, be continued; and revised the description of industrial incidence of silicosis.

The Industrial Standards Act was amended to extend its application, not only to building and construction in Halifax and Dartmouth, but to any other city, town, or other municipal district as the Governor in Council may determine by proclamation.

The Nova Scotia Labour Act, first enacted in 1933, was re-enacted to remain in force until May 1, 1947.

The Trade Union Act was amended to substitute the words "Minister of Labour" for the words "Provincial Secretary," wherever they occur therein.

Factory and Boiler Inspection.—The number of industrial accidents reported or ascertained

during the fiscal year was 1,216, of which six were fatal. Of the total, 325, including three fatal, occurred in the wood-working industry; 248, of which three were fatal, occurred in the metal trades; 408 occurred in the steel and wood ship-building industry and 235 in miscellaneous manufacturing plants. No accidents occurred from boiler failures and no violent explosions took place in connection with any boiler coming under the jurisdiction of the Boiler Inspection Act.

Vocational Training.—The Technical Education Branch of the Nova Scotia Department of Education has co-operated with the provincial Departments of Labour, Agriculture and Industry in promoting various phases of vocational training. Advantage has been taken of the assistance granted the provinces by the Vocational Training Act, passed by the Dominion Government in 1942. Marked progress was reported in industrial apprenticeship during the year and encouraging support was given both by trade unions and employers. In the matter of youth training, the projects undertaken at North Sydney, Sydney and Glace Bay, some ten years earlier, to provide "opportunity schools" for youths desiring vocational counselling, employment or instruction, conducted both day and evening classes for some 300 trainees. Of this number, 95 completed their training and were placed in employment. In addition, nearly 900 received vocational guidance and 172 were given special technical instruction. Training for rural youth was carried out by the Department of Agriculture as part of that Department's extension work. Instruction in internal combustion engines and navigation was provided for fishermen and assistance was continued in the form of financial loans and grants to worthy and needy university students pursuing courses in science, engineering, medicine, dentistry, mathematics, forestry and social service.

Notes of Current Interest

Labour legislation enacted by Parliament in 1947

Of special labour interest were several statutes enacted during the Session of the Dominion Parliament which closed on July 17.

Bill 338 to provide for the Investigation, Conciliation and Settlement of Industrial Disputes, given first reading by the House of Commons on June 17, was referred to the Standing Committee on Industrial Relations which recommended on July 8 that a similar Bill be introduced early in the next session. Evidence was given before the Committee by the Trades and Labour Congress, the Canadian Congress of Labour, Canadian Brotherhood of Railway Employees, Canadian Federation of Labour, Canadian Construction Association, Canadian Manufacturers' Association and the Canadian Bar Association. Written representations were submitted by the Canadian and Catholic Confederation of Labour and by the Dominion Joint Legislative Committee of the Railway Brotherhoods (see p. 1102).

A Canadian Maritime Commission was provided for to make recommendations for the development of a merchant marine and of a shipbuilding and ship-repairing industry, to exercise such functions arising from the Canada Shipping Act as the Minister of Transport may direct, to administer steamship subsidies, and to perform any other duties imposed on it by any other Act or Order in Council.

A Dominion Coal Board is to be established to recommend measures concerning the production, importation, distribution and use of coal in Canada, to take over the duties of the Dominion Fuel Board, to administer any subsidies relating to coal, and to perform any functions concerning coal, of the Minister of Reconstruction and Supply which the latter may require and any other functions conferred by any statutory authority.

A stipulation made in an amendment to the Canadian National-Canadian Pacific Act, 1933, is that rates of pay, hours of work and other conditions of employment of persons employed by the two transcontinental railway companies shall be those determined by collective agreements which are filed with the Minister of Transport.

The above laws and others will be summarized at greater length in the LABOUR GAZETTE for September.

Survey of professional openings in Canada

One year ago the Dominion Department of Labour was given the responsibility of carrying out a national survey to assemble information on future employment opportunities in all vocational fields for university-trained personnel, for the use of educational and other authorities interested in matters of occupational guidance of persons taking university training—in particular veterans.

The general plan was to visit employers and discuss the question of future demands that might be expected to occur in the years 1947 to 1951 inclusive, these being years of large graduating classes due to veteran enrolments. At the same time the universities would be asked for estimates of the numbers expected to graduate in all types of courses, making possible a comparison between potential supply and demand.

Much of the field work has been completed during the past year and the analysis of returns obtained from some 1,500 employers and covering every field of university training is now well in hand. Included among the employers of university-trained personnel who were approached were the various professional associations (to uncover information relating to groups who are largely self-employed) and the Federal and Provincial Governments. The facts collected from individual employers included the present needs for professional and technical personnel, together with the expected requirements for new projects, expansion, or replacements for retiring personnel.

The first report to be made available has been one dealing with the possibilities of employment in the engineering field. Reports are in the process of being prepared on agriculture, architecture, and forestry and will be available in the near future. Commerce, law and accountancy are now under study.

The universities estimate that in the five years, 1947 to 1951 inclusive, 12,885 students will graduate in all branches of engineering—1,111 in 1947; 1,800 in 1948; 3,487 in 1949; 3,730 in 1950; and 2,757 in 1951. About 40 per cent of all who will graduate as engineers in 1948 will be veterans, and in 1949 about 75 per cent.

It is estimated that emigration and diversion to non-engineering fields (teaching, law, commerce, finance, etc.) will reduce the total number of these graduates seeking engineering posts in Canada by approximately 15 per cent to about 11,000. (Emigration will probably account for about 10 per cent and diversion to non-engineering fields about five per cent.)

In practically all branches of engineering, there is a tendency on the part of employers to indicate greatest need in 1947 (when the supply is actually the smallest) and to taper off as estimates reach far into the future. This is due in some measure to present acute shortages and also to a disinclination to make even implied commitments too many years ahead.

Subject to the possibility of making such revisions as additional information will indicate, the total demand for engineers over

the five-year period is estimated at 9,450—civil, 2,200; mechanical, 2,100; electrical, 1,750; mining, 1,300; chemical, 1,100; metallurgical, 300; and others, 700.

Employers were asked to base their estimates on "full employment." It may be assumed that only a few have erred on the side of undue optimism, and some carried caution to the point of refusing to make an estimate.

In order to ascertain the views of management in Canadian undertakings in a general way, employers were asked whether they felt there was any trend towards a freer use of university-trained personnel. Approximately two-thirds of the employers replied that there was. These employers represented over three-quarters of the total employment field covered.

The work involved by the survey, particularly the visiting of employers to secure employment forecasts and other related data, has been the particular responsibility of the staff of the Bureau of Technical Personnel, assisted by various officers made available by the Department of Labour and by the Executive and Professional Division of the National Employment Service.

Pension plan revised at Bristol-Myers

The Bristol-Myers Co. of Canada Ltd., has announced the institution of a pension scheme for its employees which will enable an employee retiring at 65 to expect a continuing income equal to half his salary. The scheme replaces an older one believed by the company to be inadequate.

The plan is open to all regular full-time employees between 30 and 65. Members of the original plan, under 30, may become non-participating members until age 30, retaining any retirement income already purchased by their own and the company's contributions or may take a cash payment equal to the sum of their own contributions with credited interest.

Normal retiring age is 65 for both men and women but a member may retire at 55 if he has at least 20 years' employment or 15 years' credited service under the plan. (Credited service means service which would entitle him to membership in the plan.)

Employees' contributions are graded according to income, the rate in each income bracket increasing after age 50. The company's contributions are calculated to provide about 68 per cent of the cost of the plan which is underwritten by the Annuities Branch of the

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

NOTE.—Much of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

¹ Base 1926=100. ² Base, June, 1941=100. ³ Base, 1935-1939=100. ⁴ These figures have recently been revised for the years 1935 to present and are available in the *Monthly Review of Business Statistics* for May, 1947. ⁵ Figures are for four-week periods.

⁶ Factory shipments.

Dominion Department of Labour and in part by the Aetna Life Insurance Co.

Contributions between age 30 and 50 are designed to provide an annual income equal to 2 per cent of the employee's salary for each year of employment (a total of 40 per cent of his average earnings). Contributions between 50 and 65 provide an income equal to $2\frac{1}{2}$ per cent of the salary for each year employment (or $37\frac{1}{2}$ per cent). Thus an employee participating in the plan would receive a retirement income equal to $77\frac{1}{2}$ per cent of his average earnings during the period.

When the employee retires, in lieu of the retirement income payments provided under the plan he may choose:

(a) A joint and survivor annuity providing a reduced income payable to the member during his lifetime and to his joint annuitant if she (or he) survives him as long as she lives.

(b) A modified joint and survivorship annuity (not available from the Dominion Government) providing for a reduced income to the member and for continuance of a specified portion of such reduced payments after his death as long as the joint annuitant lives.

If a member's employment terminates before either retirement date or before either 15 years "credited service" under the plan or 20 years of employment have elapsed the employee is entitled to receive:

1. From the Annuities Branch:

An annuity contract based on the portion of his contributions and those paid by the company on his behalf to the Canadian Government.

2. From the insurance company:

(a) a cash payment equal to his own contributions to the insurance company, with interest; or

(b) A paid up retirement income beginning at age 65, based on his own contributions to the insurance company.

3. A reduced paid up retirement income at 55.

If a member dies before his retirement income begins his beneficiary will receive his contributions to the Annuities Branch with 4 per cent interest annually, and those to the insurance company with credited interest.

In addition to its retirement income plan, the company also has free disability, life and health insurance.

Employment and industrial Statistics

The accompanying table contains the latest available statistics reflecting industrial conditions in Canada. Figures are shown for certain months in the current year as compared with the corresponding period in 1946.

Business activity was at a high level during June, according to available indicators. The upward trend of wholesale prices continued during the month. Employment was the highest ever recorded during the month of June. Per capita weekly earnings reflecting increases in wages and high employment, were at the highest level recorded since the record was begun in 1941. Railway traffic as indicated by carloadings was again heavy.

Employment and Earnings—The index of industrial employment, calculated by the Dominion Bureau of Statistics, stood at 184.5 at June 1 as compared with 179.6 at May 1 and 169.9 at June 1, 1946. Based on the 1926 average as 100, the index of 184.5 at June 1 was the highest in the record for the time of year and exceeded by 8.6 per cent that of 169.9 at June 1, 1946, at which time the situation was greatly affected by industrial disputes. A moderate increase in employment was reported in manufacturing. In the non-manufacturing group, there were large gains in mining, transportation, and construction. In mining, the settlement of the coal strike in Nova Scotia and New Brunswick and the partial resumption of operations contributed materially to the increase of employment in this class. Improvement was also recorded in logging, communications, hotels and restaurants and trade.

Reports from 17,696 employers showed combined staffs of 1,889,247 persons, an increase of 50,559 from the total reported at May 1. Payrolls distributed by the reporting firms at the beginning of June amounted to \$68,368,861, an increase of 3 per cent over the total reported at May 1. The weekly average per employee at the date under review was \$36, the highest in the past six years; at May 1, the figure was \$35.89. Per capita figures at June 1 in earlier years were: 1946, \$31.68; 1945, \$32.10; 1944, \$31.80; 1943, \$30.93; 1942, \$28.20 and 1941, \$25.25.

Prices—The general index of wholesale prices, based on the 1926 average as 100, was 127.8 in June as compared with 125.3 in May and 109.3 in June, 1946. The index of textile products advanced 7.2 points from 123.9 in May to 131.1 in June, due to increased prices for cotton thread, yarn and fabrics, raw wool

and wool cloth. The index of vegetable products moved from 111.4 in May to 111.8 in June while the index of animal products advanced 1.6 points in the same period, from 128.0 to 129.6. Increased prices for copper, lead, zinc and solder were reflected in the index of non-ferrous metals which rose from 115.1 to 116.9. The index of non-metallic minerals advanced from 111.4 to 113.0; iron products, from 133.7 to 134.8 and wood products, from 161.0 to 162.8. The index of producers' goods rose from 125.6 in May to 128.5 in June while the index of consumers' goods advanced from 112.5 to 116.5. The index of Canadian farm products showed an increase of 0.7 points, from 118.5 to 119.2.

The cost-of-living index, based on average prices for the years 1935 to 1939 as 100, rose from 134.9 on June 2 to 135.9 on July 2, when the index was 8.9 points higher than at the beginning of the year, and 10.8 points higher than on the corresponding date last year. The advance in the general index since August, 1939, was 34.8 per cent.

Five of the six component groups showed increases. The index for the food group rose from 157.7 on June 2 to 159.8 on July 2, and compares with 144.2 on the same date last year. Among the individual food items showing increases were butter, cheese, eggs, lamb, rice, cocoa, potatoes, marmalade and lemons.

The rentals index at 117.8 on July 2 was unchanged from the previous month but was 5.2 points higher than last year. The index for fuel and light advanced from 116.7 on June 2 to 117.3 when it was 10.1 points higher than at the beginning of July, 1946.

The clothing index rose to 143.2 on July 2 as compared with 142.4 on June 2 and 126.4 a year ago. The index of home furnishings and services was 142.5 as against 139.8 on June 2 and 125.1 last year while the index of miscellaneous items moved to 117.2 from 117.1 in the previous month and 113.7 at the beginning of July a year ago.

Job evaluation plan undertaken at Ingersoll-Rand

The Canadian Ingersoll-Rand Company, Limited has completed and effectuated a job evaluation scheme covering 325 different work classifications in its plant at Sherbrooke, Quebec. This scheme, which covered all hourly rated employees, evaluated the relative worth of the various occupations on the basis of weighted components of each occupation. A detailed description of each job was worked out and the value of the job, measured accordingly.

The plan was one which has been used extensively in Canada and the United States by the metal trade and heavy machinery industry. According to the standard practice of the plan, a complete description of each job was handed to each man and after receiving his approval, it was classified by a rating system to find its relative worth in the plant. This rating was determined by the use of a group of eleven weighted factors common to every job. These factors included education, experience, initiative and ingenuity, physical, mental or visual demands, responsibility for damage to equipment, responsibility for material or product, responsibility for safety of others, responsibility for the work of others, working conditions, and job hazards. After each job had been carefully analyzed and broken down into eleven factors, the scale of points for each factor was applied. The total number of points for each job gave that job its point rating. Following this, each job was placed in one of ten labour grades, according to the points allotted, and a wage scale was developed for each grade.

In order to insure that a just and fair wage was allotted to each grade, a survey of rates paid for comparable jobs in the community was made and a flexible wage scale was worked out for each labour grade. Necessary wage adjustments were made to bring each man into his proper bracket.

During the course of the survey a series of job evaluation bulletins were issued to the employees which traced each progressive step and outlined the general procedure of the plan. Examples of job descriptions and the method of grading each job were included in these bulletins to help the employee better understand what action was being taken. Meetings of shop foremen were also held at regular intervals to keep them informed of all developments so that they might be fully qualified to answer questions from the employees in their respective departments.

Labour conditions in Yellowknife, N.W.T., area

An investigation of labour conditions in the area of Yellowknife, Northwest Territories, was recently made by Mr. R. H. Hooper, Industrial Relations Officer, Department of Labour, who held discussions during June with employers and union spokesmen in the district.

Mr. Hooper reported on legislative problems relating to workmen's compensation, holidays with pay, hours of work and other matters. Conditions in the area are affected by the

great distance which separates Yellowknife from Edmonton, the nearest centre of population. Two of the largest mines have been organized, the workers being represented by Local 702, International Union of Mine, Mill and Smelter Workers. "Only a small proportion of the people to be found in the Yellowknife area at any given time can be regarded as residents," Mr. Hooper states. "When workers are required for a new mine development, a new industry, a construction project or a public service, they must as a general rule be secured from 'outside'". It is the practice for employers to engage workers through the Yellowknife and Edmonton offices of the Employment Service and to provide transportation by air from Edmonton. In some cases this transportation is provided free to the employee; but in the majority of cases, the cost is deducted from the employee's pay cheques over the first two, three or six months. Then, if the employee stays a stipulated length of time, or until the completion of the job for which he was engaged, this transportation cost is returned to him.

With respect to outward transportation, it is fairly general practice after a worker has worked a stipulated number of shifts, a stated number of months, a "reasonable" length of time, or until the completion of the job, for his employer to provide free transportation back to Edmonton.

A fair number of workers in the mining and construction industries in and around Yellowknife this summer have been university students seeking both money and experience to help them through their university courses during the coming winter.

Mr. Hooper recommends that the first step in regard to any legislative action that is contemplated should be the appointment of a board, representing employers and workers in the area with an impartial chairman, which could make proposals on the basis of a full knowledge of local conditions.

"Plant visit program" to improve service in employment office

With a view to providing an increasingly efficient service, the local employment office at Moncton, New Brunswick, has initiated what it terms a "plant visit program."

Administrative and technical officials of important industrial plants in the area give lectures to the employment office staff and other interested persons, regarding the jobs in the respective plants. The following day the members of the employment office staff who attended the lectures visit the plants and this

is followed by further lectures and explanations on what has been seen there.

Where a plant is too large to be visited in one day, visits are repeated. These visits provide an opportunity for selection officers to view job performance in the plant and for the preparation of job analyses by the Employer Relations staff in co-operation with officials of the firm concerned.

Programs of this kind tend to develop confidence in the local office on the part of the employer, and also insure the best possible quality of selection because of the knowledge of the job.

Potentialities of LMP committees

A bulletin (No. 2) issued in July by the Labour-Management Co-operation section of the Department of Labour is designed to focus attention on the manifold functions of Labour-Management Production Committees. It suggests that in too many instances the committees have failed to utilize their full potentialities.

Recommending that "the scope of the committees should embrace all problems falling within the general category of production, except those which are subjects of collective bargaining procedures, such as wages, hours, grievances, etc.", it enumerates specific relevant activities as follows: (1) improve efficiency; (2) increase production; (3) maintain high quality of output; (4) promote mutual understanding and confidence; (5) boost morale; (6) reduce accidents; (7) sponsor health and nutrition programs; (8) promote education, welfare and recreation; (9) reduce absenteeism and labour turnover; (10) conserve materials and equipment; (11) eliminate obsolete practices and unnecessary routines; (12) encourage suggestions; (13) facilitate the handling and storing of materials; (14) improve design and use of fixtures; (15) simplify routing of materials and products; (16) publicize the work of the committees.

CCL assails dual loyalty of Communist unions

The Canadian Congress of Labour declared in a news release on July 21, that "collusion between unions under Communist domination, both in the American

Federation of Labor and the Congress of Industrial Organizations, has been dealt a devastating blow by Philip Murray, President of the CIO, who in a letter to Pat Conroy, Secretary-Treasurer of the Canadian Congress of Labour, to which all CIO Unions in Canada

are affiliated, insisted that certain CIO Unions in Canada cease supporting the United Textile Workers of America (AFL), allegedly under Communist domination, and urged support of the Textile Workers' Union of America (CIO-CCL) in its efforts to organize the textile workers of your great country."

In a circular letter sent to all affiliates, President A. R. Mosher and Secretary-Treasurer Pat Conroy charged that the "obvious dual loyalty springs not from a desire to aid the organization of workers as such, but rather from political solidarity with those in control of the AFL Textile Workers' Union, and thereby ignores the basic loyalty of our affiliates to the Congress itself."

The officers stressed, however, that the action had in no way interfered with the Congress' aim to establish organic unity within the trade union movement. "On the contrary, unless these underhanded so-called 'United Fronts' on the basis of disloyalty to our Congress are halted immediately, they will grievously injure the opportunity for such organic unity between the different trade union centres in Canada."

Financial condition of British co-operatives

A report in the New York *Times* of July 9 quotes officials of the London Co-operative Society as saying that British co-operatives are in "an extremely strong financial position." It is asserted that "if free markets prevailed they could spend many millions on badly needed goods." The London Co-operative Society claims to be "the largest in the world with an annual trade of \$100,000,000." It is pointed out that it is one of the five co-operative societies in Metropolitan London and serves nearly 2,000,000 people. It has a capital of \$72,000,000. However, "about half of this amount," it was said, "is idle in the banks, because of lack of goods to purchase."

AFL approves consumers' co-operatives

Asserting that "an orderly downward readjustment of prices and an increase in consumers' buying power are essential if 'full production' and 'full employment' are to be maintained," the AFL *Labor's Monthly Survey* for July, claims that "by organizing as consumers in co-operatives, we can mobilize our buying power to achieve these goals."

Concluding its analysis of current prices, jobs and living standards, the bulletin states that "almost every AFL member (in the

United States) spends at least \$800 a year a year on living necessities. These dollars spent in co-operative stores, will fight for fair prices and good quality. Over 7,500,000 members, buying in consumer co-operatives and saving in credit unions can be an immense power for good."

Workmen's compensation laws expanded in U.S.A.

The United States Department of Labour's publication *Labour Information Bulletin* reports in the July issue that workmen's compensation in twenty-five states has been greatly strengthened by laws passed so far this year. Occupational disease laws were enacted for the first time in Iowa, Nevada, South Dakota, Tennessee and Texas, making a total of thirty-eight states with such protection. Second injury funds were established in South Dakota, Vermont and West Virginia, bringing to a total of thirty-five the states now having such funds. Complete re-enactment of the Nevada compensation law, putting it on a compulsory rather than elective basis, makes a total of twenty-one states that now have compulsory compensation laws. Increased benefits were provided in several states. Colorado raised the amount of its disability and death benefits. Delaware provided for compensation payment during the entire period of total disability rather than for 500 weeks. Maryland provided for compensation in death cases for 500 weeks. In Rhode Island the daily allowance for hospital care was raised from \$4.50 to \$8. Other states that improved their benefit provisions were Kansas, Montana, Nevada, New Mexico, North Carolina, Oregon, South Dakota, Texas, Vermont, Virginia, Washington and Wyoming.

Group insurance coverage in U.S.A.

The Life Insurance Association of America announces that group insurance and annuity policies covering 46,950,000 workers were in force in the United States on January 1, representing an increase of 9,750,000 or 26 per cent over the preceding year. Premiums on these policies in 1946 totalled \$917 million, a rise of nearly \$90 million over 1945.

New agreements signed in U.S. coal mines

Collective agreements, providing what newspaper accounts declared to be the most far-reaching benefits yet received by coal miners in the United States, have been concluded between the United Mine Workers and the

operators of the nation's bituminous and anthracite mines. Signed on July 8 for northern and midwestern bituminous mines the agreed upon terms of the contract were subsequently accepted for the remainder of the soft coal industry and for the anthracite mines. It replaced the agreements which were in force during the period of the mines' operation by the Federal Government.

The chief terms of the agreement were reported in the *New York Times* as follows:—

1. *Wages and Hours:* Wages are increased from \$11.85 to \$13.05 a day. Hours are cut from nine to eight a day at straight time for a five-day week, with a sixth day at overtime left to the option of the producer. The eight hours include an hour of travel time and a paid lunch period of a half-hour, instead of fifteen minutes as under the former contract. With the pay rise and reduction in hours, the hourly wage rate is increased from \$1.185 to \$1.63, a gain of \$.445. Under the new provisions weekly earnings for forty hours will be \$65.25.

2. *Health and Welfare Fund:* The royalty on tonnage for the union's health and retirement fund is raised from 5 cents to 10 cents a ton. A new board to administer the fund is created, representing the operators, the union and the public. John L. Lewis will be chairman; Ezra Van Horn, of Cleveland, will represent the industry; and Thomas Murray, New York financier, will be the third, neutral, member. The new levy is expected to yield at least \$50 million a year. The fund so far accumulated, which is transferred to the new board, amounts to \$25 million.

3. *Vacations:* An annual vacation from June 26 to July 5, 1948, is provided, together with payment of \$100, to be prorated for miners not employed a full year.

4. *"Escape" Clause:* The contract is to be effective as long as persons covered "are able and willing to work." By means of this clause the union will avoid penalties for unauthorized stoppages and so be spared from one restrictive effect of the Taft-Hartley law—the bringing against it of civil suits for stoppages in violation of contract. The contract also provides for exclusive machinery for settlement of disputes, a clause also aimed at freeing the union from the jurisdiction of the National Labour Relations Board under the new labour law.

5. *Mine Safety:* The new agreement incorporates the federal mine safety code which was provided in the government contract and creates a joint operator-union board to review and revise the code.

6. *Union Shop and Check-off:* The union continues to be recognized as exclusive bargaining agent and under it all production employees are obliged to join the union. The union is authorized to check off union dues, fees and assessments.

The operators estimated that the agreement would lift coal prices about \$1 a ton, while the union set the increased cost of coal at 67 cents. Price rises in steel and resulting advances in prices of other commodities were considered possible.

Clothing workers receive simultaneous vacation period in U.S.A.

The Amalgamated Clothing Workers (CIO) and employers in the men's and boy's clothing industry have by agreement joined other firms and industries in the practice of providing simultaneous vacations (L.G., July, 1947, p. 914) for the industry's employees. Manufacture of men's and boy's clothing throughout the country was halted for two weeks (from July 3 to July 14) during which time 150,000 members of the union went on vacation. Vacation pay was computed on the basis of a full 40-hour week at the hourly rate which prevailed during the best week of the manufacturing season just ended.

In the following two weeks 200,000 members of the Amalgamated Clothing Workers, in allied industries, received simultaneous vacations.

UMW supervisory employees' union dissolved in U.S.A.

The United Clerical, Technical and Supervisory Employees of America, an affiliate of District 50, United Mine Workers (AFL), has ordered the dissolution of all its locals, with a membership totalling 30,000. Under the Taft-Hartley law (L.G., July, 1947, p. 943) supervisory employees may join unions but an employer is free to bargain with them or not, as he chooses. The District 50 affiliate is dissolving because for the duration of the current miners' contract, John L. Lewis, UMW president, has waived the right to bargain for supervisors and bosses. Fire and weigh bosses and inspectors who were in the District 50 union will join the UMW with the rank-and-file members.

Foremen's strike at Ford ends

The strike of foremen at the Ford Motor Company, Detroit, which began on May 21 and originally involved 3,800, ended on July 7, with the men back at their jobs and their demands not achieved. Previously, the

company had notified the independent Foreman's Association of America that it was no longer recognized as bargaining agent of the company's supervisory employees and that the company believes "management unions are unsound in principle and unworkable in practice." The management has, however, promised that no discrimination will be exercised against the strikers. The FAA was first recognized by Ford in May, 1944. The only automotive company under contract with the FAA is now the Kaiser-Frazer Corporation.

Work stoppages increased in five countries in 1946

Work stoppages arising out of industrial disputes in 1946 exceeded the 1945 total in five out of nine countries surveyed in a recent International Labour Office analysis.

The countries showing an increase are the United States, Canada, Argentina, Ireland and Switzerland. In Great Britain, Finland and New Zealand there were fewer stoppages in 1946 than in 1945, and in the ninth country included in the survey—Czechoslovakia—no strikes or lockouts were reported.

The analysis shows the number of strikes and lockouts, the number of workers affected and the number of working days lost. It does not differentiate between strikes and lockouts, since the distinction is not observed in the published data of many countries.

The survey does not compare directly the total of working days lost with the total of days worked. The days lost, however, represent only a small fraction of one per cent of the total of days worked in each country.

In the United States, the total number of work stoppages in 1946 reached a new high of 4,985, slightly more than the previous peak in 1944. This compares with 4,750 stoppages in 1945. Approximately 4,600,000 workers were directly involved in the 1946 stoppages—a larger number than in any previous year on record and a jump of more than 1,000,000 over 1945. Total number of working days lost through industrial disputes in 1946—116,000,000

—tripled the 1945 figure. More than half the 1946 disputes were in the manufacturing industries.

In Ireland, there were 105 stoppages in 1946, compared to 87 in 1945. Almost 11,000 workers were directly involved in the 1946 disputes, while slightly fewer than 9,000 were affected during 1945. Working days lost were almost halved—150,000 in 1946—as compared to 244,000 in the previous year.

In Canada, the movement was similar to that of the United States. In 1946, there were 228 stoppages, an increase of 31 over the previous year, with a total of 139,474 workers involved in 1946 as against 43,000 in 1945. More than 4,500,000 working days were lost in 1946, more than three times the figure of 1945. By far the greatest number of disputes, workers involved and days lost were in the manufacturing industries (L.G., March, 1947, p. 421).

The figures for Argentina, covering only Buenos Aires, show the number of work stoppages in 1946 to have trebled the 1945 total, while the total number of workers involved was seven times higher than in the previous year. Working days lost through strikes were almost four times greater in 1946 than in 1945.

In Switzerland, the number of disputes in 1946 increased over the previous year, the total number of workers directly involved and the total number of working days lost rising to five times the 1945 totals.

In Great Britain, including Northern Ireland, the total of work stoppages decreased slightly, the statistics showing 2,191 disputes in 1946 as against 2,293 in 1945. The total of workers directly involved was 6,000 fewer than in 1945, while the total of working days lost was nearly 700,000 below the previous year.

In Finland, the total number of disputes and workers directly involved in 1946 fell to one-third of the 1945 totals.

In New Zealand, the total number of disputes, workers directly involved and working days lost during 1946 were approximately one-half those of 1945.

Proceedings of House of Commons Industrial Relations Committee

Committee Hears Evidence on Bill to Replace Wartime Labour Relations Regulations and Industrial Disputes Investigation Act

ON June 30 the House of Commons Standing Committee on Industrial Relations commenced hearings on Bill No. 338, to provide for the investigation, conciliation and settlement of industrial disputes.

The bill—the summary and text of which was published in last month's issue of the *LABOUR GAZETTE*, when introduced in the House by Honourable Humphrey Mitchell, Minister of Labour, on June 17—was scheduled for promulgation during the past session. On July 4, however, the Prime Minister announced that further action on the measure would be held over until the following session to give the Committee ample time to carefully study the evidence.

From June 30 until Parliament prorogued on July 17, the Committee held daily sessions at which the representations of organized labour, employers and other interested parties on the provisions of the bill were heard. Among the organizations which presented

briefs were: The Canadian Bar Association, the Canadian Manufacturers' Association, the Canadian Chamber of Commerce, the Railway Association of Canada, the Canadian Construction Association, the Trades and Labour Congress, the Canadian Congress of Labour, the Canadian Brotherhood of Railway Employees, the Canadian and Catholic Confederation of Labour, and the Canadian Federation of Labour.

The composition of the Committee was as follows: Mr. M. Lalonde, Chairman, Mr. D. Croll, Vice-Chairman, Hon. Humphrey Mitchell and Members Adamson, Archibald, Baker, Beaudoin, Beaudry Black (Cumberland), Blackmore, Boivin, Case, Charlton, Cote (Verdun), Gauthier (Nipissing), Gibson (Comox-Alberni), Gillis, Homuth, Johnston, Jutras, Knowles, Lafontaine, Lapalme, Lockhart, MacInnis, McIvor, Maloney, Maybank, Merritt, Raymond (Beauharnois-Laprairie), Ross (Hamilton East), Sinclair (Vancouver North), Skey, Smith (Calgary West), Viau.

Summary of Submissions

Statement of Mr. Lee A. Kelley, K.C., Law Society of Upper Canada

The first witness to appear before the Committee was Mr. Lee A. Kelley, K.C., representing the Law Society of Upper Canada. Mr. Kelley, in a prepared statement, which he said, was fully supported by the Canadian Bar Association, strongly opposed the restriction of "the traditional right of barristers to appear before any judicial or quasi-judicial body, a right which the bar has always claimed. Perhaps equally important to the public", he added is the right related to that, which is also our claim, that the public should be entitled if they see fit to have representations made through counsel. It has always been the traditional right of the public to have representation by counsel on such occasions if they so desire, but by the provisions contained in section 32, subsection (8), of the draft bill, they are deprived of that right. You have taken away from them a right which has been recognized as a right of the public, one might almost say from time immemorial; a fundamental right, and by

this clause it means they are barred from the benefit of counsel through the medium of legislation."

Such a restriction, the witness contended, would operate disadvantageously to smaller organizations by debarring them from having evidence properly prepared and presented before conciliation boards. Larger organizations able to call upon "expensive" expert assistance, other than lawyers, would thus secure important advantages, he alleged.

Another point raised in the statement was the possibility of professional abuse resulting from the prohibition of the use of counsel in labour disputes. Disbarred lawyers and experts in other fields could legally contribute their services to clients engaged in conciliation proceedings while lawyers in good standing were alone barred, the statement maintained.

Submission of Mr. Pat Conroy, Canadian Congress of Labour

The brief prepared by the Canadian Congress of Labour was read by Mr. Pat Conroy,

Secretary-Treasurer. It opened by approving certain of the draft bill's provisions as distinct advances over P.C. 1003. These were: "the statutory provision for equal representation of labour and employers on the Labour Relations Board; the certification of unions instead of individuals; the new definition of employee, which appears to settle the vexatious and contentious question of what constitutes a confidential employee for purposes of collective bargaining; and the omission of the word 'lawful' from section 3, which would otherwise be almost meaningless."

It declared, however, that a great many provisions were open to serious objection including the bill's "unnecessarily" limited coverage, the contemplated period of conciliation during which strikes would be prohibited and the extension of legal entity to trade unions for purposes of prosecution under the proposed measure.

The Congress declared that one of the bill's most serious defects was its failure to provide machinery for dealing with nation-wide disputes which "concern Canada as a whole." Section 62, providing for co-operative arrangements with the provinces was held inadequate. "A great national emergency would have to be dealt with by two, three, four, perhaps seven or eight provincial governments, under widely varying legislation, with the national government a helpless spectator."

The brief recommended that failure or refusal to bargain collectively be made an unfair labour practice and claimed that section 9 (3) (a) as drawn up permitted a single employer to veto collective bargaining when it extended beyond his own plant. Strong objection was expressed to the section which gave the National Labour Relations Board the authority to revoke certification when it considered the bargaining agency no longer possessed a majority of the employees in a particular unit. This provision, the Congress stated "will operate as an invitation to unscrupulous employers to meet a certified union's notice to negotiate with a claim that since the certification proceedings commenced the union has lost its majority; or else, to dilly-dally along with negotiations for some weeks or months and then claim that the union has lost its majority, and that therefore its certification should be revoked."

The length of time involved in conciliation procedures was declared to be too long. Similarly the prohibition of taking a strike-vote until 14 days after receipt of Conciliation Board's recommendations by the Minister of Labour was held to be unduly restrictive to the rights of trade unions.

"The Congress submits also that there should be no prohibition of a strike vote during the period of conciliation. The employer does not have to take a vote of his shareholders before declaring a lockout; he can therefore make all the necessary preparations for a lockout while conciliation is going on. A well-conducted democratic union, such as most Canadian unions are, cannot undertake a strike at all without a vote of its members; under this bill, it would be prohibited from making any preparations for a strike while conciliation was going on, though the employer could go merrily ahead making all the preparations he liked. The union would be penalized for adhering to democracy, and the inevitable effect would be to encourage unions to declare or authorize strikes without strike votes. This, surely, can hardly be considered sound public policy.

"Section 45 provides that, for purposes of a prosecution under this act, a union shall be deemed a person, and any act or thing done or omitted by an officer or agent of a union within the scope of his authority to act on behalf of the union shall be deemed to be an act or thing done or omitted by the union. One serious objection to this is that many unions engage in many activities besides collective bargaining, and accumulate funds earmarked for these various activities; and that under this section all these funds could be levied upon to pay fines for breaches of the Act.

"Another objection is that the term 'agent of a trade union' is not defined, and would presumably be subject to judicial interpretation; and the union might find itself called on to pay fines for acts of someone whose actions it had not authorized or even approved, actions of which it might entirely disapprove, actions of someone who, in the union's own opinion, was acting altogether beyond the scope of his authority. The law of agency was not developed for dealing with trade unions; its application to unions, the Congress understands, is by no means simple. It is possible that this section should be qualified by some such words as those of section 1 of the British Columbia Trade-Unions Act, which provides that no union shall be liable in damages for any wrongful act in connection with a trade dispute unless the members or the council, committee or other governing body, acting within the authority given it by the union constitution and by-laws, or in accordance with resolutions or directions of the members resident in the locality, have authorized or been a concurring party in such wrongful act.

"The Congress is advised that the indirect effect of this section and section 41 (3) and

(4) may be to make unions suable in damages in a civil court, as in the famous Taff Vale case in England.

"Is a national or international union or a central labour body to be held responsible for every act of any local 'agent' which a judge or magistrate considers to have been done within the scope of his authority? If so, we may get some very queer and unexpected results; and great national and international organizations of the most unimpeachable respectability may find themselves crippled."

Continuing Mr. Conroy enunciated the Congress' demand for legislative safeguards of trade unionism.

"The sole method of enforcement under this bill," the brief stated, "is by summary conviction. This means that offences will be dealt with in police courts by magistrates and justices of the peace. Magistrates and justices of the peace and judges generally are, as a rule, unfamiliar with industrial relations. This method of enforcement also involves considerable delay and infinite possibilities of raising technical points."

"The Congress feels that enforcement of the Act should be the responsibility of the Labour Relations Board. The method should be the filing of a mandatory order of the board with the appropriate court, and violations should be punishable as contempt of court. The enforcement should be swift and as nearly automatic as possible, and the penalties should be severe.

"If, however, the police court method is to be retained, the penalties should be revised.

"Section 40 (1) and (3), and section 42 place unions and corporations on the same footing as to fines, which is an absurdity. A fine of \$150 per day might mean a great deal to many unions in Canada, but there are many companies for which this would be a trifling penalty.

"Section 40 provides for back pay for employees suspended, transferred, laid off or discharged contrary to section 4, but does not provide for reinstatement. The Congress submits that this is a serious omission which should be repaired."

The concluding paragraphs in the Canadian Congress of Labour submission dealt with the lack of uniformity of labour legislation in the provinces and offered several proposals for overcoming it. Briefly, the alternatives suggested were as follows:—

1. Parliament to pass a labour act applying to all industry in the country and rely on the recent decision of the Privy Council in the Canada Temperance Act case for its validity. This would give Parliament power to legislate on any matter of interest to the country as a whole.

2. Amend section 91 of the B.N.A. Act, to give the Dominion jurisdiction over "labour relations", which at present belong to the provinces.

3. Amend section 95 of the B.N.A. Act to give the Dominion, as well as the provinces authority in labour relations.

4. Ask the British Parliament to pass a B.N.A. Act interpretation act to correct misconstruction of the Constitution by the Privy Council. "It has been claimed by some constitutional lawyers that the scheme of Federal and provincial jurisdictions planned by the Fathers of Confederation has been completely wrecked by Privy Council decisions."

A fifth suggestion offered by the C.C.L. was that Parliament make use of section 94 of the Constitution which gives the Dominion authority to make provision for the uniformity of all laws relative to property and civil rights in provinces other than Quebec.

Submission of Mr. Percy R. Bengough, Trades and Labour Congress of Canada

In conveying to the Committee the views of the Trades and Labour Congress of Canada in respect to Bill 338, President Percy R. Bengough stated that his organization considered the Bill "a step in the right direction" and accepted it as "worthy of enactment." (Mr. Bengough's statement on the attitude of the T.L.C. towards the proposed measure also appears in last month's issue of the LABOUR GAZETTE.)

Mr. Bengough testified that while his organization believed that "one of the first steps towards national unity is uniform labour and social laws throughout the Dominion" it was realized that the Dominion Government did not yet possess the necessary jurisdiction to formulate such legislation. It was in view of this limited authority and in consequence of the number of changes to P.C. 1003 which were incorporated in the proposed bill at the request of the Congress that approbation was extended. Mr. Bengough informed the Committee.

Mr. Bengough supported the clause restricting legal aid in collective bargaining.

"The Trades and Labour Congress of Canada," he said, "has the highest regard for our friends in the legal fraternity. We give them credit in the strong trade union with real closed shop conditions that they have built and maintained, but we are strongly of the opinion that in the field of labour relations that legal training has proved itself more of a detriment than an asset."

Another clause singled out for elaboration was section 8 dealing with certification of craft or skilled groups in an establishment. "Regard-

ing section 8, this is designed to give recognition to groups of employees who belong to a craft or group exercising technical skills by reason of which they are distinguishable from the employees as a whole, and who are members of a trade union of their craft. There is apparently a wrong impression in some industrial union quarters that this provision is a menace to such organizations. The fact remains that a similar provision has been retained in the British Columbia Act respecting the right of employees to organize and providing for conciliation and arbitration of industrial disputes for the last ten years. In operation it has not hindered labour organizations formed and operated on industrial lines, and has been of benefit to the established craft unions."

During the questioning which followed his submission, Mr. Bengough declared that the Trades and Labour Congress would definitely favour amending the British North America Act so as to permit the enactment of uniform labour and social legislation.

Statement of Mr. Gerard Picard, Canadian and Catholic Confederation of Labour

Mr. Gerard Picard, president of the Canadian and Catholic Confederation of Labour, said in a statement submitted to the Committee that "the piece of industrial legislation presented in the House of Commons at Ottawa is without doubt the most progressive to date."

In commending the labour bill, Mr. Picard suggested that the Minister of Justice should study it "to amend the Criminal Code regarding strikes and picketing".

"Even if this proposed law does not entirely meet with the views of Canadian union members, it marks a sensible improvement over the Wartime National Labour Code; it is superior to the United States' legislation, and it contains a good number of points which could profitably inspire the provincial government of Quebec," the Confederation head added.

Although of limited jurisdiction, the suggested Canadian board of labour relations would be of much use if it established labour legislation to guide the provincial labour courts, Mr. Picard said.

Mr. A. R. Mosher, President, Canadian Congress of Labour

Mr. A. R. Mosher, President of the Canadian Congress of Labour and National President of the Canadian Brotherhood of Railway Employees and Other Transport Workers, read the brief of the latter organization with respect to Bill No. 338.

Concerning application the Brotherhood stated "our principal contention has always been that the parliament of Canada should assume exclusive jurisdiction in the field of labour legislation. We feel that Bill No. 338 is a 'National' Labour Code in name only. The arguments in favour of truly national legislation in labour matters have already been urged upon this committee. If we are ever to have any uniformity of labour legislation in Canada, we believe that the Dominion Government will have to assume jurisdiction.

"It is to be hoped that parliament will recognize its national responsibility and act accordingly by making the necessary constitutional amendments."

The brief held the bill's definition of "employee" an improvement over the definition in P.C. 1003 but contended that it appears to be designed to exclude foremen as "managers" or "superintendents." "There is no logical reason for such an exclusion.

"There are sufficient cogent arguments... to justify the inclusion of foremen and supervisory employees in Bill No. 338, unless they are employed in positions where they are entrusted with confidential information concerning an employers' labour relations policy.

"It is suggested, therefore, that 'employee' should be defined as follows:

(I) 'employee' means a person employed to do skilled or unskilled manual, clerical or technical work, but does not include:

(1) a person who, in the opinion of the board, is entrusted with confidential information concerning his employer's policies or practices respecting the relations between the employer and his employees;

(2) a member of the medical, dental, architectural or legal profession qualified to practice under the laws of a province and employed in that capacity."

"Section 8 provides that upon proof of the existence of a craft unit and majority membership therein, the unit 'shall be entitled' to certification. In this respect, this section continues the objectionable provision of section 5(4) of P.C. 1003; in fact, it is more specific than before in that it ensures automatic certification if majority membership in a craft unit can be proven. This can only lead to instability in labour relations. Many establishments are represented, for collective purposes, by industrial unions. This section can be the cause of much inter-union rivalry in the future."

"Sections 39 to 46: These are the 'enforcement' provisions of the Act. Provision is made for punishment of offences by 'summary conviction', thereby giving jurisdiction in these

matters to police magistrates and to justices of the peace. It is submitted that the police court is not the proper forum for the disposition of matters involving industrial relations. A much more intelligent and broader approach to the issues will be available if these matters are heard by the labour relations board. The board should be given the responsibility for determination of offences under the Act."

"Sections 41 and 45: The Brotherhood takes strong objection to these sections which have the effect of making a trade union 'a person' for the purpose of its being prosecuted. Once this principle is established by legislation, the next steps will be to make trade unions suable in civil actions. The principle herein contained strikes at the fundamental concept of trade unionism, namely that it is a voluntary association of workers to which there should not be attached the same degree of liability as in the case of a corporation. For all practical purposes, section 45 has substantially the same effect as if compulsory incorporation had been provided for."

Statement of Mr. W. T. Burford, Canadian Federation of Labour

Mr. W. T. Burford, Secretary-Treasurer, Canadian Federation of Labour, in his appearance before the committee stated that "on the general question of this legislation while we recognize that the government and parliament are doing the best they can to implement the desires of what they conceive to be the bulk of the organized workers, and while I think this present legislation represents a commendable effort in that direction, without stressing too much what we conceive to be its inequalities and anomalies we are not enamoured of this type of legislation at all which we regard as an effort to impose police direction upon labour organizations."

Mr. Burford upheld the practice of regulation of labour affairs by a system of codes, extending throughout an industry or occupational group conditions voluntarily arrived at by a large proportion of the workers and important employers, as superior to legislative imposition.

Submission of Canadian Chamber of Commerce

The first spokesman for management to be heard by the Committee was Mr. W. J. Sheridan, Manager of the Economic Development Branch of the Canadian Chamber of Commerce. In the main Mr. Sheridan's criticism centred upon what was claimed to be the bill's failure to impose upon trade unions legal responsibilities commensurate with their present day power and privileges. Mr. Sheridan outlined certain adjustments to the

bill, as brought forth, which the Chamber of Commerce considered would serve to equalize "the rights and responsibilities of employees and employers which are essential to the orderly conduct of labour relations."

These in brief were: That the right of persons to abstain from joining employee or employer organizations be guaranteed.

That mass picketing to prevent entry or leaving a plant, and the secondary boycott, be prohibited.

That an employer's legal rights to change conditions of employment where a collective agreement is not in force not be curtailed.

That the right to strike be further regulated, for example, by prohibiting the sympathetic strike and by requiring a properly supervised and secret ballot after the expiry of a "cooling off" period.

That trade unions, on application for certification, be required to provide statutory information. In addition, trade unions should be required to furnish members with annual financial statements.

That prior approval of the Minister of Labour should not be required to institute prosecutions.

That safeguards to restrict the powers and operations of the proposed Canada Labour Relations Board, including an appeal to the courts, be established.

Brief of Canadian Manufacturers' Association

Appearing for the Canadian Manufacturers' Association, Mr. O. H. Barret, of the Association's Committees on Legislation and Industrial Relations placed strong emphasis upon the concept of equated responsibility as between trade unions and employers in collective bargaining.

"Bargaining between one party who is legally responsible and another party who is not can never be satisfactory," he stated. "Collective bargaining should be made a two-way street; in other words, the right conceded by the employer to the union should be balanced by equally effective rights conceded by the union to the employer."

"It should be made clear that, in the Association's view, the principle of equality before the law really requires that trade unions should be made legally responsible through incorporation."

"It recognizes, however, that such a provision does not come within the scope of a bill which deals with collective bargaining and conciliation, and submits that consideration should be given to the introduction of separate legislation designed to achieve this object."

Following up the suggestion in respect to registration, the Association recommended that a new section 3A should be added to the act which would require that every trade union or union subject to the act should forthwith register with the Department of Labour and that no registration should be permitted unless the union maintained an office or resident agent in Canada.

"This suggestion," the brief pointed out, "implements a proposal contained in the opening remarks of the submission. At present, it is often extremely difficult to obtain any reliable information regarding trade unions and their officials. It is intended by recommending registration to secure some measure of definiteness and responsibility with respect to trade unions. This would give the Department of Labour, employers and the public, some information about trade unions. It is particularly desirable to ascertain with whom he is dealing."

Among the suggested changes recommended by the Association were the following:—

Addition of a subsection which would make illegal "slowdowns" or other "unfair labour practice."

Addition of a subsection which would prevent issuing of pamphlets, bulletins, etc., relating to any terms and conditions of employment with an employer without the date of issue and the name and address of the issuer of the bulletin, etc., being shown. It was submitted that this was essential in order to prevent "the issuing and distribution of anonymous bulletins which may contain misstatements of fact, and even libels."

Addition of a subsection to the effect that "no trade union shall authorize, declare, participate in, condone, support or in any way encourage its members to participate in, con-

done or support a sympathy strike or a secondary boycott."

Addition of a new subsection to the effect that no trade union should authorize or declare a strike unless the majority of the employees in the bargaining unit had expressed a desire to strike in secret ballot . . . not earlier than the day following the date of the decision of the conciliation board.

Mr. Pat Conroy when queried by the Committee, the following day, on the Association's suggestion of incorporating trade unions told the Committee that "incorporation of trade unions would lead to more disputes and a greater disharmony in industrial relations than any other thing that I know of."

"The net result of that (incorporation) would be complete industrial chaos . . .

"Why should unions be forced to incorporate when employers are not compelled to incorporate? It is still optional with employers. That is one question employers have not chosen to answer.

"At what point should a union be forced to incorporate? Before it starts organizing? Before it signs its first contract? Would a charter be granted on mere application or would the government or a government department have discretion to grant or refuse, and thus to prevent a trade union from functioning even under incorporation? . . .

"While great responsibility is required in the trade union field, as in all other fields—and I suggest the House of Commons as well—basic to more responsibility is more wisdom on the part of employers and trade unions, and the responsibility will follow.

"Incorporation will not generate great wisdom; it will only dislocate what may be developing good relationship and makes the effect worse than the cause."

Evidence Presented before Senate Standing Committee on Immigration and Labour

Report of Committee Favours Selective Immigration

CONTINUING its studies of Canada's immigration problems (L.G., June, 1947, p. 779) the Senate's Standing Committee on Immigration conducted further hearings during June. Leaders in such fields as transportation and national and civic government, as well as students of ethnic and refugee problems appeared as witnesses. The Committee subsequently submitted a report, which was adopted by the Senate on July 15, and which is summarized at the conclusion of this article.

Authorities on transportation who presented statements were: Mr. S. W. Fairweather, Vice-President of Research and Development, Canadian National Railways; Mr. J. S. McGowan, Director, Department of Colonization and Agriculture, Canadian National Railways; and Mr. M. W. Maxwell, Chief of Development, Canadian National Railways.

Mr. S. W. Fairweather, Vice-President of Research and Development, C.N.R.

Speaking from the standpoint of the railways, Mr. Fairweather drew attention to the effect of increased mechanization and improved techniques in augmenting production per capita in agriculture and the other extractive industries. He asserted that "in the primary and extractive industries we (Canada) probably produce as much per capita as any country in the world.... One of the results is to produce a condition which is the equivalent of immigration at the rate of about 250,000 people per year." Asked for an explanation of this statement, he said: "every year 250,000 people in Canada have to look for new jobs. This is the result of technological improvement." He continued: "fortunately our technological advances and our general fertility are capable of absorbing that number without decreasing our standard of living. On the average we do find employment for them and our standard of living has been going up from year to year."

Mr. Fairweather pointed out that "the railways' interest in immigration lies in the prospect of increased gross and net revenue. The railway can have little interest in immigrants who would carry on at subsistence level." He stated that "the average per capita gross earnings of Canadian railways lies between \$50

and \$70 per year, of which \$10 to \$15 remains after payment of operating expenses. Inferentially," he continued, "immigration leads to increased business activity and more traffic for the railway. More traffic, however, under average conditions, means that more capital must be invested in the railway for additional equipment, additional facilities and possibly for branch line extensions. These economic factors," he declared, "set limits to the value of immigration to the railways, because if it is assumed that the average immigrant is as productive as the average Canadian, the amount of capital which the railway could justifiably spend per immigrant is \$150 to \$175. If more than this amount is expended, the railway industry would be adversely affected."

Mr. J. S. McGowan, Director, Department of Colonization and Agriculture, C.N.R.

At the outset, Mr. McGowan sketched briefly the statement that he had made before the Committee during the 1946 hearings. Proceeding he said: "There are many good immigrants from the British Isles and other countries in Europe applying for admission. A statement issued (in British newspapers) in October of last year showed that 150,000 people in the British Isles had registered their intention of coming to Canada." He added, however, that his department (Colonization and Agriculture C.N.R.) "was able to secure shipping space for about 200 British immigrants" in the last few months of 1946. As an illustration of the type of British immigrant seeking admission to Canada at this time, Mr. McGowan stated that the group of 200 "had capital to the extent of approximately half a million dollars." He stated, however, that at the present time, British immigrants are allowed to bring out only £5,000 over a period of four years. In his opinion "under present Canadian Government regulations, we could bring in a reasonable number of new people," but "this prospective movement is severely restricted by the lack of shipping accommodation and the regulations in some countries covering the transfer of capital."

Concerning the problem of meeting present-day conditions, Mr. McGowan suggested that the Committee give "particular attention" to securing additional shipping facilities. He declared that this phase "required closest study if an immigration movement for next year of any consequence is to be developed to meet the productive needs of this country."

Dealing with the question of long-range policy, Mr. McGowan declared that it called for "the widest possible study and complete understanding of the value of the immigrant in our economy." He asserted that "the unemployment and overproduction of the '30's still seem to dominate our approach to this question," but, he continued, history proves that "as each wave of new immigrants reached our shores, new developments took place providing more and greater opportunities for our own people." He referred approvingly in this regard to the evidence presented to the Committee by Mr. Pat Conroy of the Canadian Congress of Labour, with respect to the sentiment of the people of Canada favouring a larger population. "We have this extremely large country with virtually only a handful of people inside it; and because of the uncertain world situation many of us are worried lest if we do not look after our heritage we may lose it."

However, Mr. McGowan emphasized the need that exists for clarifying and determining the question of how many people Canada can absorb. He declared that "to develop a long-term constructive policy, public opinion must stem from a deep conviction that increased population is vital and necessary to the future welfare of our people and our country." Continuing, he said, "it is difficult to believe that in this new world that has become so small, we can refuse to share some of our living room and at the same time expect to trade freely with those countries that have a surplus of people . . . In any consideration of a long-range program, in any examination, any analysis of our position today, if it be practical and thorough, we are forced to the conclusion that our future is dependent to a very great extent on what our immigration policy will be."

After analysing briefly, certain recent Canadian vital statistics, especially as they are related to the basic industries of agriculture, mining and lumbering and "the general labour picture," Mr. McGowan emphasized the following points: "(1) Our whole post-war policy of reconstruction is dependent to a great extent on an adequate labour supply; (2) available capital for the extension of our mining industry and other new developments

cannot be utilized fully as long as the shortage lasts; (3) if development and production in our primary industries are restricted due to labour supply, employment and business in our secondary industries will be restricted likewise." It was his opinion that "we still have a long way to go in the development of our farm lands, and in the more efficient use of the lands presently occupied, apart altogether from the settlement of our new lands." He continued "we do know that in the years ahead much resettlement will have to be carried out in our older settled areas and most of this will have to be done by immigrant farm settlers."

Mr. McGowan declared that he was "strongly in favour" of admitting relatives of Canadians and felt that in that connection, "we can be reasonably generous in our application of rules and regulations." Especially in connection with "displaced persons," he felt that "anything we can do to meet this immediate problem will reflect greatly to the credit of our country and benefit us more than those who receive a welcome at our hands." He asserted also, that "we should not restrict our immigrants to unskilled labour and those for settlement on the land. Industrially we are young and the admission of people with skills and new techniques should be very helpful in our progress." He pointed out that because of comparatively small population, the opportunities for men trained in our universities are restricted and many of them migrate elsewhere. He thought that more might be done to develop a counter movement of immigrants from the United States "to help balance our loss."

In conclusion, Mr. McGowan asserted that "our planning must take into consideration the question of a permanent shipping service to meet the needs of this country in immigration, tourists and trade." Speaking for his own Department of the Canadian National Railways he stated that "with a well trained, experienced staff, some with more than 25 years experience, we are prepared to do our share in developing and maintaining a constructive immigration movement."

*Dr. B. K. Sandwell, Honorary Chairman,
Canadian National Committee on
Refugees*

Speaking for the Canadian National Committee on Refugees, Dr. B. K. Sandwell, pointed out that the problems of displaced persons in Europe are of immediate importance and had little to do with any long-term immigration policy that may be decided upon.

He quoted a portion of the definition of displaced persons contained in the constitution of the International Refugee Organization as follows:

"Members who will not be the concern of the organization—

- (1) War criminals, quislings and traitors.
- (2) Any other person who can be shown (a) to have assisted the enemy in persecuting the civilian population of countries members of the United Nations, or (b) to have voluntarily assisted the enemy forces since the outbreak of the second world war in their operations against the United Nations."

"All such persons," Dr. Sandwell said, "are automatically out of the category of displaced persons...." On the other hand, the Refugee Organization asked the assistance of the Senate Standing Committee on Immigration "in making it easier to bring to this country displaced persons without reference to their occupational class... without any attempt to distinguish between labour and farming classes as against professors." He held too, that there should be no discrimination because of racial or religious origin, but that they should be considered "because they are displaced persons and they have nowhere to go and they want to come to one of the newer countries of the world... They want to live under a democratic form of government and for that reason they want to come to Canada, the United States... or to any other country with a reasonable prospect of remaining democratic." He pointed out that "practically all of the large trade union organizations have passed a resolution in favour of just the sort of thing we are asking you to help us bring about."

*Mr. Alex Skelton, Director General of
Economic Research, Department of
Reconstruction and Supply*

The brief presented to the Committee by Mr. Alex Skelton dealt "primarily with the economic aspects of immigration, rather than the political, social or cultural sides of the question." He first of all described Canada's industrial structure pointing out the increased diversification in industry and the advance that had been made in agricultural production during the war. This increased industrial activity created new high levels of employment and also revealed manpower shortages and "gaps appeared among the managerial and professional classes, in the technical and scientific groups, and among certain skilled craftsmen, particularly in the occupations hit by the depression."

Mr. Skelton asserted that "if the high levels of income and employment achieved during the war and the reconversion period are to be maintained, there will have to be continued expansion, not so much in the primary industries... but rather in the secondary industries, in the service trades, in the improved distribution of our goods both at home and abroad." He claimed that industrial management and scientists will have to find new or more effective uses of the country's resources, evolve new products, new processes and make all-round improvement in facilities for production and in maintaining markets. He presented an analysis of employment and income throughout Canada during recent years, drawing attention to the high level of employment, especially in the manufacturing industries. He referred to the advantages derived from the employment of greater numbers of technically trained personnel during the war and of the current shortages in trained technicians and scientists "at the intermediate and senior level."

Summing up the employment situation, Mr. Skelton said: "The pattern of demand for labour at present and as it appears to be emerging, suggests that the domestic supply is inadequate and that the shortage tends to manifest itself in sectors important in our export trade and also, in the areas contributing the less tangible elements to our standard of life. The range of jobs offering is wide, both men and women could be absorbed, and the emphasis need not fall entirely on heavy labour, particularly in view of the extreme seasonability of demand for this type of worker."

Concluding his brief, Mr. Skelton suggested that "in formulating an immigration policy for Canada, the principal aim should be directed towards a more balanced economy. It should always be borne in mind," he said, "that immigration cannot be isolated from the other factors affecting the economic progress of our country. It is not a cure-all for all economic ills... nor is it the cause of unemployment and depression such as we have experienced in the past..." Continuing he said, "a selective immigration policy would take account of specific shortages, but would at the same time anticipate future surpluses by introducing new skills to create more employment opportunities, to increase production, to introduce cost-reducing innovations, and establish new markets for finished goods." He asserted that "selective immigration is not a restrictive policy, permitting only the entry of those who would fill persistent labour shortages. Nor is it a wide-open policy for the indiscriminate entry of unlimited numbers of immigrants who would

not fit into the economic picture. It is," he said, "rather a policy that sets a target consistent with the absorptive capacity of the country—a target that aims at attracting industrialists, merchants, scientists, technicians, and skilled and unskilled craftsmen, best suited to industrial conditions." He held that "no fixed annual quota can be set, as the figure will vary according to economic requirements. At the present time Canada is in a position to take all the immigrants, selected on the above basis, for whom transportation can be found."

"Such a policy," he said, "would encourage the migration of families, especially young people, and would not conflict with the present regulations covering the admission of agriculturists and workers in heavy industries, as well as the relatives of persons already resident in Canada. . . Selective immigration would encourage the maximum use of Can-

ada's resources and would form part of an integrated program for Canadian development on a national scale."

Among others who presented either verbal or written statements during the June sittings of the Committee were: Mr. Frank Foulds, Canadian Citizenship Branch, Department of the Secretary of State; Col. C. A. Krug, Assistant Director, Canadian Citizenship Branch; Mr. W. M. Teresio, President, Association of United Ukrainian Canadians; Miss Constance Hayward, Executive Secretary, Canadian National Committee on Refugees; Mr. George A. Wenige, Mayor of London, Ontario; Mr. Stanley Lewis, Mayor of Ottawa; Mr. James Colley, Resident Representative of the Inter-governmental Committee on Refugees; Mr. A. Hlynka, M.P.; Mr. J. W. Arsenyck, K.C., Winnipeg; Mr. W. Wasylshen, Winnipeg; Very Rev. Dr. Basil Kushnir, Winnipeg.

Report of Senate Committee on Immigration

BY order of reference made in the Senate on March 13, 1947, the Standing Committee on Immigration and Labour was authorized and directed to "examine into the Immigration Act (R.S.C. Chap. 93 and amendments), its operation and administration and the circumstances related thereto, including (a) the desirability of admitting immigrants to Canada; (b) the type of immigrants which should be preferred, including origin, training and characteristics; (c) the availability of such immigrants for admission; (d) the facilities, resources and capacity of Canada to absorb, employ and maintain such immigrants, and (e) the appropriate terms and conditions of such admission."

The following Honourable Senators constituted the Committee: James Murdock, P.C. (Chairman), W. M. Aseltine, A. Blais, T. D. Bouchard, T. J. Bourque, W. A. Buchanan, G. P. Burchill, J. A. Calder, P.C., G. P. Campbell, T. A. Crerar, P.C., A. Daigle, A. David, J. J. Donnelly, V. Dupuis, W. D. Euler, P.C., C. E. Ferland, J. T. Haig, A. C. Hardy, P.C., R. B. Horner, W. J. Hushion, J. A. Lesage, J. A. Macdonald, J. A. McDonald, G. G. McGeer, J. P. Molloy, F. W. Pirie, W. M. Robertson, B. Robinson, A. W. Roebuck, W. H. Taylor, C. Vaillancourt, C. J. Venoit, (Mrs.) C. Wilson.

During the two months, April 23 to June 25, the Committee held 12 public hearings, at which some 60 verbal and written submissions were received. Among those

who gave testimony were administrative officials of the Immigration Branch of the Federal Department of Mines and Resources, labour leaders, statisticians, authorities on transportation, economists, and students of racial and refugee problems.

It is pointed out in the Committee's report which was tabled in the Senate on July 10, that a number of the witnesses "attended in Ottawa the last session of Parliament, as well as this session and all came at their own expense and at considerable time and effort in order to impart their knowledge and views for the general public welfare."

Public Opinion on Immigration

The report states that "public opinion in favour of the admission of a considerable number of carefully selected immigrants seems to have developed since your committee made its report in favour of properly regulated immigration during the session of 1946, and to have become even more forceful and decided." Further, "not a single witness advocated the closed door; all were in favour of immigration and of Canada doing her share in the rescue of the displaced persons of Europe and there was general agreement that there should be careful selection in order to exclude those who by character or health are unfitted to play a useful part in Canada's system of democracy, including social and economic democracy."

* See L.G., June, 1947, p. 779.

Easing Government Restrictions

The report expressed the approval of the Committee at the easing of governmental restrictions against immigration and of the increased departmental activity resulting therefrom. As against the current manpower shortage in farming, lumbering, mining and, to some extent in urban industry, the report draws attention to "the 850,000 displaced persons in public camps under American and British jurisdiction. Thousands of Canadian citizens have relatives in the European countries . . . whom they earnestly desire to rescue." The steps taken by the government in the progressive development of a less restrictive attitude toward immigration are outlined in the report. These include the Prime Minister's statement (L.G., May, 1947, p. 644) admitting Canada's moral obligation to assist European refugees and displaced persons and the subsequent passing of Order in Council P.C. 2180, dated June 6, 1947, providing for the admission of 5,000 persons from European displaced persons camps; the reopening of immigration offices in Europe and elsewhere which were closed during the war; enlisting the aid of the Intergovernmental Committee (L.G., June, 1947, p. 772) on Refugees; completing certain arrangements with the British authorities; and increased activity of the Canadian immigration officials.

Immigration, a Government Function

The Committee held "that immigration is a proper function of government and that under no circumstances should control be permitted to fall into private hands. Such immigrants as are admitted," the report continues, "should come to Canada under government auspices, and should be free on arrival to accept employment from any employer within the class or classes of industry to which they are destined."

Immigration from Britain

Referring to immigration from the British Isles the report states that "large numbers of persons in the British Isles are willing and anxious to come to Canada or other of the self-governing British countries." Attention is drawn to the agreement between Australia and the British Ministry, effective on April 1, 1947, "under which Great Britain pays the passage of British soldiers migrating permanently to that country." It is pointed out that "Australia expects a normal flow of 70,000 immigrants annually, 40,000 of them from Great Britain. Twenty thousand from Britain is the Australian estimate for this year."

On the other hand, it is declared that "so far this year the number of immigrants arriving in Canada is very disappointing, particularly so within the classification of relatives." The Committee expressed its approval of the action of the government in "broadening the regulations to include the families of those admitted on the ground of relationship." The report goes on to say: "Your committee is of opinion that generally speaking the best immigrants obtainable are the relatives of persons who are already here and who have themselves made good to the extent that they are in a position to guarantee the success of the newcomer relatives from abroad." However, some doubt is indicated with regard to the admission of single men and women and the opinion is expressed that "when single persons have been admitted, every facility should be given for the subsequent admission of spouses and families and fiancées."

The Committee "heartily approves" the action of the Secretary of State for Canada in "giving attention to the problem of receiving and welcoming immigrants on their arrival in Canada," in "imparting information as to Canadian civics and what is known as 'the Canadian way of life.'"

General Policy on Immigration

It is conceded that "there is some difficulty in laying down a general policy and some objection to settling policies for months or years to come, but something of the kind is now required." The report states that "beyond the Order in Council that Canada will admit 5,000 displaced persons, there is no settled policy in existence. One may assume what Canada will do in this regard in the future, but there is no pronouncement upon which business men may rely." Continuing, it states that "an immigration movement to be successful must be organized. Ships must be provided and shipping companies will not build or re-design vessels for the immigrant service unless assured for at least a few years of continuous employment. Facilities for the reception of immigrants, their primary education and training, and their settlement in rural or urban communities cannot be successfully provided on a short-term or sporadic basis." The report continues that "what is needed is a steady flow of newcomers maintained over the years, and the first essential to the planning of such a movement is the governmental assurance that it will be permitted."

It is recommended that "the government extend to its immigration officials a greater liberty of discretion in special cases," and it

suggests that "the officials themselves take courage to apply for special Orders in Council whenever circumstances warrant, so that undesirable rigidity be avoided and the administration of the Act be made as humane and considerate as possible."

Conclusions Reached

Summarizing its thesis, the Committee sets forth the following eight-point "opinion."

"(1) That there are within Canada natural resources sufficient for the support of a very much larger population than Canada now possesses, providing the resources are intelligently used for production, and not merely held.

"(2) Industrial conditions in Canada are favourable at present for a considerable expansion in manpower both in primary industries and in manufacturing.

"(3) The admission of a considerable number of immigrants to engage in farming, lumbering, mining, and shipping and, as well, those skilled in urban production, would not lower the standard of living in Canada, but rather would at present tend to improve it.

"(4) A better balanced economy, the result of an expansion of industries other than farming, can be brought about only by increases in population.

"(5) There are available in Europe numbers of skilled artisans, technicians and professional men, workers experienced in new trades and masters of various established arts, men having creative and managerial capacity

capable of founding new industries or improving old ones, 'entrepreneurs' and so forth. Such men should be welcomed to this country in all cases where there is a reasonable assurance that they will add to our knowledge, capacity or efficiency, contribute to our economy, or assist us in competition.

"(6) In the camps for displaced persons in Europe there are great numbers of people who are suitable in accordance with the most exacting standards, for settlement as immigrants in this country.

"(7) The success achieved in past years by immigrants of such national groups as Ukrainians, Poles, Greeks, Scandinavians, Germans, Italians, Hungarians, Roumanians, Austrians and others, as described in many weighty representations convinces us that the policy of admitting such people should be continued.

"(8) Public opinion approves a carefully selective immigration in numbers not exceeding from time to time the absorptive capacity of our country, and industrial and economic conditions at present are favourable. The Government should in consequence find some way to provide the necessary ocean transportation, the failure of which is the only physical bar now to a successful immigration movement."

Concurrence in the report was moved in the Senate by the Chairman of the Committee, Senator, Hon. James Murdock, on July 14. Following a discussion, which was completed the following day, the motion for the adoption of the report was agreed to, on division.

Convention of Canadian Manufacturers' Association Considers Labour Relations

MAINTEINING and, so far as possible, increasing industrial production was a keynote in the deliberations of the Canadian Manufacturers' Association at the Annual Meeting held in Banff, Alberta, June 2, 3 and 4, 1947.

Owing to the large number of delegates it was considered necessary to conduct the business on the panel system. Concurrent meetings were held to discuss various phases of the program.

Federal Labour Legislation

In his report, Mr. J. T. Stirrett, General Manager, outlined the Association's views on the proposed federal Industrial Relations and Disputes Investigation Act. He said: "The Association considered the draft Industrial Relations and Disputes Investigation Bill which was drawn by the Dominion Department of Labour, following a Dominion-Provincial Conference held in November, 1946. The Bill was designed to take the place of the Wartime Labour Relations Regulations embodied in Order in Council P.C. 1003, dealing with collective bargaining, unfair labour practices, conciliation and related matters. Criticisms and suggestions with respect to the draft Bill were invited by the Dominion Government, not only from the provinces, but from organizations of employers and employees. The work of studying the draft Bill was done, in the first place, by a Sub-Committee which included five representatives of the Association on Dominion and Provincial Labour Relations and Wages Boards. The Association's submission to the Dominion Government was that the following general principles should be incorporated in any Labour Code:—

"1. Union security (closed shop, union shop, maintenance of membership, check-off, etc.) should not be countenanced or facilitated.

"2. In order to qualify as bargaining agent a union must show that the majority of the employees are members in good standing, which should mean at least, that union dues have been regularly paid for some months.

"3. Foremen should not come under collective bargaining legislation.

"4. Collective bargaining should be on a local basis, not industry-wide.

"5. Registration of trade unions should be required.

"6. Unfair practices of unions should be prohibited to the same extent as those of employers.

"7. The employer should be permitted to apply for de-certification of a union when it appears that it no longer represents the majority of his employees.

"8. Sympathy strikes and secondary boycotts should be banned.

"9. No strike should be called until a strike vote has been held under the direction of the Labour Relations Board. The Board should have power to order a vote to be held during a strike.

"10. Union funds should be made available to pay fines imposed upon a union.

"11. Unions like employers should be required to keep full records of membership and finances.

"12. Mass picketing should be prohibited."

Preventing Inflation

Referring to labour productivity and its relation to wages and the danger of inflation Mr. Stirrett stated: "With a marked shortage of materials, and consequently of both consumer and capital goods, with wages control lifted, and prices control being gradually removed, with a prodigious pent-up volume of purchasing power, and finally, with a substantial increase in wages, the Association has taken the view that the best way of staving off the inflation which the various factors mentioned tend to cause, is greater and greater production; and while new machines and new techniques can do part of the job, full success in increasing production is only possible if there is a substantial increase in productivity per worker.

"Replies received from a representative cross-section of the Association have shown that there has been a general increase in hourly wage rates since 1939 of 56 per cent; that in about one-half of the cases there has been a decline in worker productivity, in about one-fifth of the cases, no change in productivity, and in a small minority, an increase in productivity. The Association believes that from the point of view of

preventing inflation, and in the interests of the country's economy, generally, there is no more pressing need, at the present moment than an increase in productivity per worker."

Attitude Towards Immigration

Turning to the problem of immigration Mr. Stirrett pointed out that during the year 1946-47 the Association had approved in principle the recommendations made by the Senate Committee on Immigration in 1946, which favoured a policy of limited selective immigration of both agricultural and industrial workers based on "the absorptive capacity of the country." However, in approving the Senate Committee's recommendation, the Association drew attention particularly "to the pressing need of workers with experience in such occupations as logging, saw milling and mining."

International Labour Organization

At the request of the Dominion Government the Association had nominated a delegate and three advisers to represent the employers of Canada at the 1946 International Labour Conference held in Montreal. Mr. Stirrett was of the opinion that "the most important questions dealt with (at that Conference) were the revision of the constitution of the International Labour Organization, and its relationship to the United Nations." He stated that "As regards the first, an attempt was defeated to change the basis of representation, so as to give representation to socialized industry as well as free-enterprise industry, which would have destroyed the tripartite character of the Organization, and left free-enterprise employers in a hopeless minority. As regards the second question, a working arrangement with the United Nations has been devised analogous to the former arrangement with the League of Nations."

Labour Legislation and Industrial Relations

In an address before the Industrial Relations Committee, Mr. E. R. Complin, O.B.E., Chairman, outlined the Association's views with respect to labour legislation. At the outset he referred to the ILO as "the cradle of labour legislation" and pointed out that at the present time "the employers of Canada have no seat on the Governing Body." He

urged that the CMA move "on an international level in labour matters" and that "the place to go and fight is the ILO."

Turning to the subject of "Labour Legislation and Industrial Relations," Mr. Complin dealt with the draft of proposed legislation which the Federal Department of Labour had submitted to the Provincial Departments and other interested bodies, including the CMA, for their consideration and comments. He stated that "after spirited deliberations in the five CMA divisions, it was obvious that the Association was pretty well at sixes and sevens on the question." "Personally," he said, "I happen to be one of those who do not want to see a national labour code. . . ." He held that the legislation in some of the provinces, resulting from their consideration of the proposed federal legislation, ignored objections raised by the CMA. However, the federal Minister of Labour had, he indicated, "taken into account some of the points" raised by the Industrial Relations Committee of the CMA, and the proposed new federal legislation had been described by the Minister as a "middle-of-the-road bill."

In spite of these assurances, Mr. Complin felt that the CMA "must do its utmost to see that certain principles, to which we most sincerely subscribe, are given recognition . . . to serve to influence provincial legislation." He urged that efforts be made to have "the manufacturing interests represented on the Canada Labour Relations Board." The railways, he said, looked upon foremen's and clerical workers' unions from a different standpoint than that of the manufacturers. He suggested that a watch be kept on the formation of clerical unions and urged that each individual manufacturer develop a clear understanding among his employees of the "free enterprise system." He concurred in a definition of management as "a means of causing men to co-operate." "When we can cause men to co-operate," he said, "we may be turning the key to increased worker productivity."

In conclusion, Mr. Complin cited remarks by the President of the American Management Association concerning certain of the fundamental needs of management: "(1) The need for a greater understanding of the way our economic system functions; (2) The importance of looking on business and industrial activity as a means of organizing the efforts of people, rather than the harnessing of materials and technological processes. . . ."

International Labour Organization

Second Sessions of Industrial Committees on Coal Mining and Inland Transport

THE second sessions of two ILO industrial committees, those on Coal Mining and Inland Transport, were held at Geneva, Switzerland, from April 24 to May 3 and from May 7 to 16 respectively.

The first meetings of these committees, held in London late in 1945, were described in a Supplement to the *LABOUR GAZETTE* for December, 1945.

The committees are tripartite in structure, consisting of representatives of governments,

workers and employers from the member countries. Their function is to treat the special problems of particular industries, giving them more detailed and continuing attention than is possible at the General Conference of the ILO.

Their decisions up to the present have generally been expressed in the form of resolutions, which are formally transmitted by the ILO to the governments and to the workers' and employers' organizations concerned.

Second Session of Industrial Committee on Coal Mining

In its second session the Coal Mines Committee of the International Labour Organization adopted resolutions advocating apprenticeship and vocational training for miners and supervisory staffs in the coal mining industry. It also agreed on policies for the recruitment of national and foreign manpower, safety regulations, housing, and working conditions in the mines.

Nine of the twelve coal producing countries represented on the Committee, namely Belgium, Canada, United Kingdom, India, Netherlands, Poland, Turkey, and the Union of South Africa, sent tripartite delegations consisting of government, workers' and employers' members. The workers' members of the United States of America were at the last minute unable to attend; Australia sent government and workers' members only, and Czechoslovakia sent only observers.

The Canadian delegation was as follows:—

Government Delegates.—Mr. J. A. McClelland, Member, National War Labour Board, Department of Labour, Ottawa; Mr. H. Hereford, Assistant to the Deputy Minister, Department of Labour, Ottawa.

Employers' Delegates.—Mr. C. Gerow, Acting Manager, Canadian Coal Operators Association, Ottawa; Mr. J. C. Nicholson, Retired General Inspector of Mines, Dominion Coal Company, Baddeck, Nova Scotia.

Workers' Delegates.—Mr. Robert Livett, President, District No. 18, United Mineworkers of America, 101-102 Burns Building, Calgary, Alberta. (Mr. Freeman Jenkins, President, District 26, United Mineworkers of America,

who had also been nominated, was unable to attend.)

By a decision of the Governing Body of the ILO, Mr. Leon Eli Troclet, member of the Governing Body and Minister of Labour and Social Welfare for Belgium, who had presided over the first session of the Committee, again acted as Chairman. The Committee elected as Vice-Chairman Mr. Robert Koenig (United States) for the Employers' group, and Mr. Arthur Horner (United Kingdom) for the Workers' group.

The Coal Mining Industry

Addressing the Committee at its first plenary sitting, the Director-General of the ILO, Mr. E. J. Phelan, said that the problems facing the world at present, particularly the problems of Europe, whether considered from the social, economic, financial, or political point of view, all led to the question of coal. The coal problem was in fact the greatest single obstacle to the recovery of Europe and to the restoration of prosperity, not only to Europe, but to the world as a whole.

The ILO Coal Mines Committee at its first session had been able, with the unique authority of the representatives of workers, employers and governments engaged in the industry, to suggest a number of directions in which solutions to the coal problem should be sought.

One of the main problems of the coal industry was the rise in the age groups and the falling off in recruitment of miners. The reconstruction and prosperity of Europe and

the securing of a higher standard of life for the workers also depended on the production of the mines. The Committee had drawn attention to these aspects at its first session; one of its tasks during the present session was to examine what effective and practical steps had been made by the employers' and workers' associations and governmental authorities in implementing them and whether the proposals required to be modified in any way.

Mr. Phelan pointed out that the consideration of questions relating to coal would involve examination of various economic and financial problems, not all of which would come within the competence of the International Labour Organization.

Procedure of Committee

Following the opening plenary sittings, two subcommittees were appointed, one of which dealt with recruitment and related problems, and the other with apprenticeship and vocational training. The reports of these subcommittees, containing a number of resolutions, were later considered by the Committee as a whole, and adopted. A number of other resolutions, dealing with a variety of subjects, were also adopted in plenary session.

Recruitment and Related Problems

The recruitment of manpower for the coal mines was recognized by the Committee as a particularly urgent problem. A report prepared by the International Labour Office indicated that in many of the European countries there had been a considerable decline in manpower in the mines since before the war. Output per worker had also decreased; and the structure of the existing labour force was affected by the dispersal of manpower, the aging of the workers, the use of prisoners and foreigners, and the use of female labour.

The Committee adopted four resolutions, concerning (1) the regulation of recruitment, (2) priority for recruitment for the coal mining industry, (3) employment of prisoners of war, and (4) miners' housing.

The first resolution referred to the decisions in regard to recruitment made by the Committee at its first session, action to apply which had already been taken or was in preparation in most of the producing countries. The Committee particularly urged the following five needs:—

(a) to improve the standing of mining as an occupation especially by placing the mineworker higher up in the comparative scale of industrial wages, and in general by providing the occupation with a code which will improve the

standard of living, the social security and the conditions of work of miners including socially backward countries;

- (b) to improve the food supply of miners, either by a better distribution of available commodities or by an increase in individual rations;
- (c) to strengthen the safety and health regulations in the mines;
- (d) to establish closer co-operation between the different parties to production; and
- (e) to modernize the mechanical equipment of the mines and methods of operation.

The resolution also dealt with the recruitment of foreign manpower, refugees and displaced persons, free German workers, and prisoners of war. Until a model agreement between governments regarding migratory movements was accepted internationally, recruitment should be conducted so as to safeguard the interests of the country, the industry, and the employers, the standard of living and interests of national workers, and the interests of the immigrant workers.

Concerning the recruitment of refugees and displaced persons, the resolution specified that agreements should be concluded with the responsible authorities in co-operation with the ILO and other competent inter-governmental organizations and in consultation with the employers' and workers' organizations. It urged that individual contracts of employment be given to each worker, and that similar protection be given prisoners of war.

The second resolution asked the International Labour Office to recommend that the needs of the coal mining industry in the countries devastated by the war should be given first priority in any arrangements for the absorption into employment as voluntary workers of prisoners of war, demobilized soldiers and displaced persons.

In a third resolution, the Committee strongly reaffirmed the opinion that the withdrawal of prisoners of war "must not jeopardize production in the countries in which they are employed," and that "when determining the date of their release account should be taken of the difficulties that exist for their replacement."

The Committee considered that during the period preceding their release the prisoners of war retained in the coal mines should henceforth receive the normal wage for their work, subject to deduction of the actual cost of their board and lodging.

Miners' Housing

The resolution on miners' housing pointed out that "the insufficient quantity or lack of comfort of housing available in mining areas is one of the most serious obstacles both to maintaining this labour force and increasing it by large-scale recruitment of additional workers."

In view of the attempts to increase further the size of the labour force, it was "indispensable and urgent" that an organized effort on a large scale be made to overcome the housing crisis, and also to lay down the general lines of a long-term housing policy for miners, designed to increase their standard of comfort.

The relevant sections of this resolution are as follows:—

Construction Programs and Particulars of Accommodation

In order to raise the average level of the housing conditions of miners and their families, the construction of dwellings, whatever the pressure of immediate needs, should always be conceived as part of a general program related to the best rules of modern town-planning as well as to considerations of beauty, comfort, and the preference of the local mining communities.

In the countries where there is a serious manpower shortage, and where shortage of building materials prevents undertaking large scale construction of permanent buildings in the immediate future the construction of temporary housing should be undertaken in mining areas where the overcrowding of existing housing calls for urgent measures of relief in this respect.

The needs for the mining areas should be accorded priority to the extent practicable in the allocation of the national building resources.

The temporary housing may take the form of family units or of collective housing.

Whether or not the housing is in family or collective units, these should be spacious enough for decency and sufficiently well-equipped to satisfy the minimum requirements of hygiene.

Where the housing is collective, there should be facilities for common dining-rooms, canteens, rest and recreation rooms, water supply and sanitary conveniences. The inside equipment and their external appearance should be as attractive as possible and they should be surrounded by open spaces.

The repair of existing buildings should only be undertaken where they are still capable of satisfying minimum hygienic standards.

To the extent practicable and taking into account local conditions, accommodations of a permanent character should include at least a kitchen with the necessary fittings, a shower-room with hot water, and individual hygienic water-closet, a living-room, a bedroom for the head of the family, and additional bedrooms according to the number of other members. Each house of the one-family type should have a garden adjoining.

The choice of location of the new buildings, especially at a reasonable distance from the pit-head, should serve as an opportunity for

breaking down the isolation of mining communities and integrating them with the rest of the population of the region.

Acquisition of Individual Property

To the extent practicable and taking into account local conditions, statutory housing societies or other competent public authorities, should direct their policy to the gradual purchase of housing accommodation owned by the collieries without prejudice to legal property rights or to the existing benefits enjoyed by miners who occupy houses free or at reduced rents.

In order to strengthen the attachment of workers to the industry, the acquisition of individual property by miners should be encouraged and facilitated either by hire-purchase methods or by systems of individual loans for purchase or construction of housing.

General Provisions

Since the distribution of the dwellings of miners and their families over an area sufficiently distant from the pit-head is an important factor in improving their housing conditions, and since this is only practicable in so far as the miners can go to and return from their employment neatly dressed and have convenient transportation at their disposal, miners' housing construction programs should take these factors of the problem into account and provide for the establishment of shower-baths and dressing-rooms at the pit-head and for the organization of comfortable transport services between outlying villages, etc., and the mines.

A copy of miners' housing construction programs, of plans for their execution, and of the progress reports in regard to housing in the mining areas should be sent to the International Labour Office, so that it may enable all the countries concerned to benefit by the experiences and achievements on record in this field.

Apprenticeship and Vocational Training

The discussion on apprenticeship and vocational training recalled that the present lack of trained manpower was partly due to the retention of older workers and to the introduction into the mines of manpower from other countries and occupations. The resolution on apprenticeship and vocational training was therefore aimed at ensuring the industry a working force which

has mastered its trade, is accustomed to the safety practices to a degree adequate to the special conditions prevailing in the mining industry, has become familiar with modern mechanized equipment, will skilfully and efficiently perform any job which may have to be done and, finally, is proud to be engaged in an occupation in which merit opens the way to the highest grades.

In general, it is stipulated that apprenticeship and training in the industry should conform with the standards recommended in previous years by the ILO for industry generally.

The resolution recommends the inclusion in the curricula of schools in mining countries of information designed to arouse interest in the industry, including visits to the pits.

There should be an apprenticeship centre in every colliery or group of collieries, established at or near the pithead. Apprenticeship training should last from one to four years, and at least up to the age of 18 years.

The program of training should include:—

- (a) general education and physical education;
- (b) practical and theoretical instruction, accompanied by visits to the mines and covering the fundamental knowledge indispensable to the practice of mining occupations with special regard to safety, all such instruction to be given in the course of normal working hours; and
- (c) productive work under the direction of experienced supervisors.

At the end of the apprenticeship program apprentices who have received satisfactory annual reports should receive certificates of vocational skill conferring upon them the title of skilled workmen. Those apprentices with the most satisfactory records of achievement may be selected for appointment to the schools for supervisory staff after an appropriate period spent at the mine.

Trainees should receive the wages corresponding to their age and work under conditions of apprenticeship laid down in collective agreements or by public authority.

Practical courses of accelerated training should be given in countries which are bringing to the mines large contingents of adult workers, coming from various occupational—and sometimes from various national—backgrounds.

In order to take account of the disturbances in the training of workers caused by the war and of the development of methods of production and the steady introduction of mechanical equipment in the mines on a larger scale, the resolution recommends that the producing countries should, so far as the technical circumstances justify, establish vocational training centres so that their collieries may be provided with a corps of skilled workers and thus obtain a maximum output.

The workers to attend such centres would be nominated from among workers actually employed whose aptitude appeared to justify training in their own interest and in that of the industry. While in attendance they should receive the wages for the job previously done at the mine, supplemented if necessary by a transfer allowance.

The resolution also recommends the training of supervisory staff and instructors, and the retraining of mineworkers who are no longer capable of following their former occupations.

In a separate resolution dealing with the protection of young workers employed underground, the Committee asked that the Office prepare a report on this subject which would serve as a basis of discussion at the next session, with a view to the establishment of international standards.

Other Resolutions

The other resolutions adopted by the Committee dealt mainly with its future program.

In a resolution concerning safety and health in coal mines the Committee requested the Governing Body to:—

1. Convene at the earliest possible date a Tripartite Technical Conference to discuss and adopt a Model Code of Safety Regulations for Underground Work in Coal Mines based on the Draft Model Code prepared by the International Labour Office in 1939;
2. Instruct the Office to begin without delay the preparation of a Draft Model Code of Hygiene Regulations for the Mining Industry, dealing with the protection of miners' health in general and with the suppression of, and the protection against, dust in particular;
3. Instruct the Office to undertake the collection and permanent co-ordination of all information available relating to the experiences and improvements made in different countries in regard to the protection of underground mineworkers against accidents and occupational diseases.

On the subject of hours of work in coal mines, the International Labour Conference adopted a Convention in 1935, which has not come into force. The Committee adopted a resolution asking the Governing Body to authorize an inquiry among the member states concerning their present position in respect of the Convention, any difficulties presented by the Convention which precluded its ratification and the particulars in which the Convention might be revised. The Governing Body was further requested to examine in the light of the replies to this enquiry the possibility of placing on the agenda of the next session of the Coal Mines Committee the discussion of a text for a revised Convention.

Three resolutions dealt with the proposed Coal Mineworkers' Charter, principles concerning which had been approved at the first session. The first of these resolutions asked that the Governing Body place on the agenda of the third session the continuation of the

examination of the application of the principles in the Charter. It also asked that the Office calculate arithmetically

the sum of the social advantages accorded to mineworkers in each country in relation to a common basis of comparison selected from another essential occupation, with a view to determining, after examination, the total social minimum to which mineworkers are entitled,

and prepare tables giving the result.

The second resolution asked the Governing Body to draw the attention of governments to the need for "economic measures tending to stabilize production and distribution," in

order that the social advantages to miners included in the Charter be not endangered.

The third resolution asked the Governing Body to recommend economically underdeveloped countries to apply at the earliest possible moment the principles in the Charter, and to draw up a program indicating the targets to be achieved in specific periods.

Finally the Committee requested that the Office prepare a report on miners' invalidity and old age pensions schemes in force in the different countries with a view to examining the possibility of guaranteeing these rights to immigrant workers.

Inland Transport Committee

The scope of the Inland Transport Committee extends to the various branches of the industry, including railways, road transport, air transport, inland navigation, and docks and harbours.

In its second session the Committee adopted resolutions on such questions as employment, training, industrial relations, statistics, and Rhine navigation.

Representatives of the following 22 countries were present at the meeting: the United States, Australia, Belgium, Canada, Chile, China, Denmark, France, United Kingdom, Greece, India, Italy, Mexico, the Netherlands, Norway, Peru, Poland, Portugal, Sweden, Switzerland, Turkey and South Africa. All these countries were represented by tripartite delegations, except China and Greece, which were represented by government delegates only. The meeting was also attended by one observer from Finland. The United Nations, the European Central Inland Transport Organization, and the International Transportworkers Federation, were also represented.

The Canadian delegation was as follows:—

Government Delegates.—Mr. Harry Hereford, Special Assistant to the Deputy Minister of Labour, Ottawa; Mr. J. A. McClelland, Member, National War Labour Board, Department of Labour, Ottawa.

Employers' Delegates.—Mr. J. C. Patteson, European General Manager, Canadian Pacific Railway Company, London, England; Mr. A. A. Heaps, Controller of Grain Handling at Head of the Lakes (Fort William and Port Arthur), Department of Labour, Ottawa.

Workers' Delegates.—Mr. Theodore Roy, Quebec Vice-President, Canadian Seamen's Union, Montreal. (Mr. J. E. McGuire, Canadian Brotherhood of Railway Employees and Other Transport Workers, who had also been nominated, was unable to attend.)

By decision of the Governing Body Mr. Henry Hauck, Director in the French Ministry of Labour and Labour Attaché at the French Embassy in London, was once again nominated Chairman.

The Committee elected two Vice-Chairmen: Mr. G. W. Quick-Smith (United Kingdom) for the Employers' group; and Mr. H. W. Fraser (United States) for the Workers' group.

The Inland Transport Industry

The problems of the transport industry, as pointed out by the Chairman at the opening sitting, are particularly acute in Europe. In several countries devastated by the war and overrun by invading armies, present-day transportation facilities are less than 50 per cent of those prior to the war. This figure must be taken into consideration with the tremendously increased demand for goods and transportation services arising out of post-war reconstruction.

However the delegates from the countries directly affected spoke in hopeful terms of their ability to meet the immediate future and overcome within the next two years the tremendous obstacles in connection with their transportation services.

A report prepared by the International Labour Office in advance of the meeting discussed the progress that has been made in the restoration of the shattered system of European transportation.

Describing the "magnificent effort, carried out in the face of tremendous difficulties arising from all sorts of shortages, and with an undernourished, ill-clad working population," the report pointed out that although factories have been reconstructed, a shortage of coal, rubber, steel, timber and other materials has prevented a quicker tempo in production and repair of transportation equipment.

Two intergovernmental bodies, UNRRA and the European Central Inland Transport Organization (an organization set up by the Allied Governments as an advisory and co-ordinating body), have played an important part in the work of restoration, which was at first carried out under the direction of the Allied military authorities.

The use of worn-out equipment which in normal times would have been discarded "constitutes a danger to the safety of the railway staff and to the public," the report stated—several hundred thousand new freight wagons are needed to bring the European railways up to their pre-war standard of operation. Motor vehicle fleets are inferior in number compared to pre-war standards and are, of course, of a much higher average age. Inland waterway and harbour craft have suffered much destruction. "Furthermore, towing power is considerably reduced by the bad quality of fuel, and the stokers, already undernourished, are overworked by the strain necessary to maintain the pressure in the boilers."

Procedure of Committee

The Committee set up four subcommittees, dealing with industrial relations, employment, statistics and Rhine navigation. Each of these subcommittees submitted reports containing draft resolutions which were later adopted by the Committee in plenary session.

Industrial Relations

The Committee adopted a resolution on industrial relations in inland transport which consisted of a set of basic principles designed to promote good relations between management and labour.

The resolution urged that employers and workers be free to form organizations of their own choosing, and that protection against discriminatory practices and coercion be provided by legislation "where full and effective protection is not already afforded."

The negotiation of collective agreements should be developed both in private and publicly owned transport undertakings; and the State should provide facilities for the development of collective bargaining.

Both parties to collective agreements should do all in their power to ensure their observance; there should be a procedure for the settlement of disputes; and both parties "should be entitled to institute legal proceedings to secure the observance of such agreements enforceable at law."

The resolution approved "the practice obtaining in certain countries whereby the

provisions of collective agreements covering substantial proportions of employers and workers in a trade or industry are extended to include other such employers and workers who would not otherwise be covered by such agreements."

Governmental machinery to fix minimum wage rates, hours of work and other conditions of employment was recommended, together with an adequate inspection system.

The State should provide machinery for the investigation, conciliation and voluntary arbitration of disputes. The right to lockout and strike should apply in inland transport as in other industries.

The resolution concluded by advocating the establishment of labour-management co-operative machinery.

Employment

In a resolution on employment, the Committee accepted the view that a "stable and maximum" level of employment in the inland transport industry was dependent upon general economic activity; and urged governments, in collaboration with employers' and workers' organizations, to take the necessary steps both nationally and internationally.

The resolution asked that careful consideration be given to co-ordinating the different branches of the inland transport industry with a view to providing efficient services and ensuring the fullest and most effective employment of transport workers.

The establishment of joint committees was recommended, to advise on all questions relating to the placing of workers in the industry.

The resolution also advocated the development of apprenticeship and training schemes, and the provision of opportunities for workers to qualify for higher positions.

Separate resolutions asked the Governing Body to request the Office to make studies of vocational training in inland transport and the decasualization of dock labour, and to submit reports to the next session of the Committee.

Statistics

The Committee made technical recommendations on the form in which statistics should be prepared dealing with employment, unemployment, hours of work, wages, accidents (including occupational diseases), and strikes and lockouts, and asked that these be communicated to the International Conference of Labour Statisticians.

Rhine Navigation

The Subcommittee on Rhine Navigation considered the fact that labour contracts for nationals of different countries employed in the same type of work differ substantially in respect of wages, hours and other working conditions. There are also great discrepancies in the provisions concerning social insurance.

The Committee asked that the ILO suggest to the governments concerned that a special tripartite conference be convened to draw up international minimum standards.

Other Resolutions

The Committee also asked that the International Labour Office

continue its study of the protection of young workers;

study the problems raised by the employment of women in the inland transport industry;

examine the Hours of Work and Rest Periods (Road Transport) Convention, 1939, with a view to ascertaining whether that Convention meets the requirements of the post-war situation;

and study conditions of employment in civil aviation; and prepare reports on these subjects to be considered at future meetings.

The Committee asked the Governing Body to make arrangements with the United Nations for a study of the co-ordination of transport by the international bodies with competence in the field of transport, with which study the International Labour Office should be associated.

It also asked that the Committee on Automatic Coupling resume its work.

Canada Ratifies ILO Texts

ON July 22 the Government of Canada ratified the Instrument for the Amendment of the Constitution of the International Labour Organization and the Final Articles Revision Convention, 1946, both of which had been adopted at the Montreal Conference of the ILO (L.G., Oct., 1946, p. 1394). The Instrument of Amendment was approved by resolution of the House of Commons of Canada on June 30, 1947, and by resolution of the Senate on July 2.

Statement by Minister of Labour

In moving the adoption of the resolution, the Honourable Humphrey Mitchell, Minister of Labour, made the following statement:—

"Consequent on the dissolution of the League of Nations and the entry of the International Labour Organization into official relationship with the United Nations, it became urgently necessary to amend the articles of its Constitution relating to membership, financing and procedure for future amendments. Therefore an Instrument for the Amendment of the Constitution was adopted at the 1945 (Paris) Session of the International Labour Conference and was subsequently accepted by the necessary majority of the member states, becoming effective on September 26, 1946. Canada's ratification was authorized by Order in Council P.C. 2914 of July 12, 1946.

"At the Montreal Session of the International Labour Conference last fall, the new Instrument of Amendment now before us was unanimously adopted and will come into force when ratified by two-thirds of the member countries including five of the eight members

of chief industrial importance represented on the Governing Body of the ILO, of which Canada is one.

"This Instrument is designed to remodel the Organization in the light of the experience gained in over a quarter of a century and to re-equip it to discharge its responsibilities with greater efficiency.

"The most important of the proposed amendments are designed to encourage wider implementing of the minimum labour standards embodied in conventions or suggested in recommendations adopted at the various sessions of the general conference of the member states of the Organization. Canada, like other federal states, has been faced up to the present with constitutional difficulties in giving effect to the provisions of many of these proposals, which come within provincial jurisdiction. One of these amendments, article 19 (7), is therefore of particular interest to Canada. It requires the federal government to arrange for periodic consultations between the federal and provincial authorities with a view to promoting co-ordinated action to give effect to the provisions of such proposals. Another obligation is that fuller reports will be made to the International Labour Office as to the action taken or proposed to be taken by both the federal and the provincial governments on all these proposals.

"Prior to the Montreal Conference, the views of the provinces had been sought by the government on the proposed constitutional changes applying to federal states, and several of the provinces were represented at the Conference by their ministers of labour or by their deputies."

Ratifications by Other Countries

The International Labour Office announced in July that the total number of ratifications by member countries of International Labour Conventions had reached 929.

The latest ratifications noted by the ILO were those of Convention No. 80, which revises the final articles of previously adopted Conventions, by Switzerland, Colombia, the United Kingdom and China (as noted above

this Convention has now been ratified by Canada also); Convention No. 26, which governs minimum wage fixing machinery, by Switzerland; and Convention No. 63, which covers statistics of wages and hours of work, by the United Kingdom.

Of the 80 Conventions adopted by the ILO since its establishment in 1919, 53 have received the number of ratifications necessary to bring them into force.

Conference on Labour Statistics

STATISTICS on the four major subjects of employment, unemployment, cost of living and industrial accidents comprised the agenda of the sixth Conference of Labour Statisticians of the ILO, which convened at McGill University on August 4.

Investigating the situation in regard to international labour statistics were delegates from 22 nations including heads of many government economic and statistical agencies.

The Canadian Government delegation was headed by Mr. Herbert Marshall, Dominion

Statistician, and included Messrs. R. N. Cram, F. H. Leacy, N. H. McKellar and R. W. James as advisers.

Representing the employer and employee sides respectively on the delegation, were Mr. Harry Taylor of the Canadian Manufacturers' Association, and Mr. Percy Bengough of the Trades and Labour Congress of Canada.

A summary of the proceedings of the Conference will appear in a subsequent issue of the *LABOUR GAZETTE*.

Second Meeting of Economic and Employment Commission of United Nations

SURVEYING the problem of international action to maintain full employment and economic stability, the Economic and Employment Commission of the United Nations Economic and Social Council stated recently that much remains to be done before its objectives are achieved.

In a report, to the Council following its second session¹, which ended on June 17, the Commission stated that in order to attain and maintain full employment and economic stability "greater efforts will be needed, and the struggle must be continued on a number of fronts. Such efforts must be made by those countries which are in a position to extend additional economic assistance to other Member nations, as well as by those whose need for assistance is very great."

Two resolutions adopted by the Commission outlined the action which it advocated to meet the immediate obstacles to economic stability.

The first of these resolutions urged Member states already having high levels of output to maintain these levels. States having commodities available for the reconstruction

of countries disrupted by the war were asked to avoid measures which would tend to reduce imports from states needing reconstruction. War-disrupted states were also urged to take a series of measures to improve their position.

The second resolution called attention to the existence of unemployment in a number of countries. It urged measures to lower abnormally high prices, especially for export goods. It favoured loans and credits to Member states "directed exclusively toward economic stability and reconstruction in the interests of the peoples of the countries receiving credit."

On the long-term aspects of full employment, economic stability and economic development, the Commission felt it had no recommendations to make until its two sub-commissions meet and make detailed studies, on the basis of comprehensive material to be collected and analyzed by the secretariat of the United Nations.

These two sub-commissions, dealing with Economic Development and with Employment and Economic Stability, will hold their first meetings in November.

The Economic and Social Council debated the report of the Commission on July 23. It decided to limit its action on the report to noting it.

¹Reference to the first session was made in the March issue of the *LABOUR GAZETTE* (p. 312).

Collective Agreements in Seven European Countries

DETERMINATION of conditions of work and terms of employment by industry-wide collective agreements between labour unions and employers' associations has been increasingly practiced since 1939 in Great Britain, Belgium, Netherlands, the Scandinavian countries and France, according to an article in the June issue of the *Monthly Labour Review*, official publication of the United States Department of Labour.

Up to the advent of World War II, negotiation of collective agreements was assisted by the Governments of these countries by facilitating establishment of joint councils of employers and employees, enactment of procedures for enforcing agreements and in some instances, amplifying agreements through legal extension to parties not the direct signatories.

The article states that national or industry-wide agreements have become common practice in the countries referred to, and in some have become predominant. These national agreements, while standardising procedural matters such as hours, vacations, training, and grievance procedures, have often incorporated local or district variations in wage rates and conditions of work.

Extent of Agreements

During the interwar period, the governments of Great Britain, France, Belgium, and the Netherlands encouraged and assisted collective bargaining at both the local and industry-wide level by the passage of legislation designed to promote collective bargaining or extend the area covered by a collective agreement.

"In Belgium during the interwar period collective agreements were concluded by joint industrial councils, voluntarily organized but with members appointed by the Government. Regional councils and regional agreements in the various industries were more common until after World War II, although national councils were set up for the iron and steel, coal mining, construction, and baking industries. Legislation of June 1945 specifically authorized the development of joint industrial councils, and more than 40 industry-wide councils were instituted by Government decree during 1946.

"Most French agreements prior to 1936 were local, and even between 1936 and 1939 com-

paratively few national (industry-wide) agreements were negotiated. Provision for a radical change in this situation is made under the 1946 collective-agreements law (see below).

"In 1933 the Netherlands authorized by law the establishment of joint industrial councils, on either a national or a regional basis, in order to encourage collective bargaining.

"Since liberation, agreements on an industry-wide basis have frequently been negotiated between union councils, representing the Catholic, Protestant, and Socialist unions in an industry on the one hand, and the voluntary associations of employers on the other. The majority of agreements, when approved by the wage stabilization authority of the Government, were being extended in 1946 to all plants in the industry, thus considerably broadening the coverage of agreements.

"Over a long period, collective agreements in British industries have been increasingly negotiated on a nation-wide basis. Such agreements have gradually tended to supersede district or local negotiations, but have often incorporated different terms for different districts, particularly in regard to wage scales.

"In Sweden, industry-wide agreements are concluded on an annual or biennial basis between federations of employers and labour unions in approximately 30 branches of industry.

"The national agreements generally contain provisions on cost-of-living wage adjustment, hours, hiring and termination of employment practices, vacations, sick leave, methods of adjusting disputes, and wage scales. The latter, however, usually vary according to local differences in living costs as measured by the Royal Social Board.

"In Norway and Denmark, the situation with respect to industry-wide agreements is similar to that in Sweden. Government mediators in both countries may consolidate cases and may present proposals covering several disputes, for collective acceptance or rejection. This practice tends to widen the scope of the resulting agreements."

Legal Extension of Agreements

In some countries a collective agreement may be extended by governmental action to nonsignatory employers and their employees

in the same trade or industry. The agreement may be extended in whole or in part on a local, regional, or industry-wide basis. Governmental extension, however, gives a legally binding character to an agreement, making its enforcement similar to that of a law or regulation.

France and the Netherlands alone have authorized general extensions of collective agreements—France by the law of 1936, the Netherlands by a law of 1937. France, the Netherlands, and Sweden provided that the terms of a collective agreement should apply to the nonunion employees of employers who were bound by the agreement. The Netherlands law of 1937 also permitted the Minister of Social Affairs to declare certain provisions of a collective agreement inoperative if, in the public interest, this was found necessary. He was precluded from extending certain types of agreement clauses relating to preferential hiring of union members or to price-fixing. On extensions, the Minister in the Netherlands was required to consult with a national Labour Council, and in France, with a competent industrial division of the Governments National Economic Council.

During the interwar period, enabling bills for the general extension of agreements were introduced and debated in the Parliaments of Great Britain and Belgium, but were not passed. A limited type of extension, however, was adopted.

Under a French law passed in 1946, agreements between the "most representative" associations of employers and employees became binding on the whole industry. Such agreements are enforceable by Government inspectors after approval by the Minister of Labour who may reject or approve the agreement in whole or in part or may write, after consultation with groups concerned and under particular circumstances, provisional agreements where no acceptable contract has been concluded. The law requires that national agreements precede the initiation of regional or local agreements. Current practice, it is reported, is to permit agreements of limited scope pending adoption of national agreements. The law specifies two groups of subjects—mandatory and optional—to be covered by the agreements: (1) The mandatory group includes provisions regarding hiring and firing, apprenticeship, training, termination of employment, guaranty of the right to organize ("trade-union freedom") and wages. (2) Optional subjects that may be included in an agreement are regulations on incentive and seniority bonuses, piece rates, and paid leave, and provisions in regard to shop stewards and

works committees (institutions already established by law). Wage rates, currently fixed by Government decree must be incorporated into an agreement.

Agreements of Central Federations

"Basic agreements, equivalent to general codes of industrial relations, have been negotiated between the central federations of employers' associations and unions in Scandinavia. These agreements, while not actually binding upon the affiliated unions and em-wage stabilization and adjustment of wages have in practice been accepted and incorporated into the collective agreements in the several industries.

"In addition to the negotiation of nationwide basic agreements, the central federations of these countries have also exercised guidance and control over the negotiation of major industry agreements. During the war period, wage stabilization and adjustment of wages in accordance with the cost-of-living index was effected by basic agreements between the central federations. Norway and Denmark supplemented the agreements by Government wage controls.

"The central federations of management and labour have in general played an important role, particularly during the war and postwar periods, in advising the governments of the countries covered in this report on social, economic, and labour policies. In Great Britain, a National Joint Advisory Council, half of its members nominated by Congress, was created in October, 1939, to advise the government on 'all matters in which employers and workers have a common interest.'

"The French Government has set up a Commission on Collective Agreements, which includes representatives of the leading trade-union and employer federations along with government officials; it is to advise the Government on matters of policy relating to wages, prices, and production, and the Minister of Labour on the approving or disapproving of collective agreements as required by the 1946 law.

"In the Netherlands a permanent joint body, the Labour Foundation, was planned in secret during the occupation and set up after liberation by 14 associations of employers and trade-unions, including the Socialist, Catholic, and Protestant union federations."

Enforcement of Agreements

Both France and Great Britain have preserved the principle of collective agreements in nationalized industries.

In Great Britain and Belgium the courts are precluded from enforcing agreements, and strikes and lock-outs during their life are legal. Damage suits arising from breach of agreement are not sanctioned by law.

In the Netherlands and France recourse to regular courts for damages is provided, but, unless expressly provided under the terms of an agreement, associations are not liable for the actions of members. They are, however, obligated to seek observance of the terms by their members.

In the Netherlands, collective-agreements clauses which bind an employer to employ, or not to employ, persons who belong to a particular union, party, or religious denomination are declared null and void by law.

In the three Scandinavian countries, collective agreements are enforceable in specially constituted labour courts. These have existed in Denmark since 1910, in Norway since 1915, and in Sweden since 1929.

In Denmark, the scope of the court's authority is based on an agreement between the central federations of employers and unions, who are also permitted to appoint the members of the court. The law itself specifies only a few legal directives. Originally established for the settlement of disputes arising out of the interpretation of the basic agreement between the central federations, the work of the court has been extended to interpret all collective agreements between employers and unions. Only organizations, not individuals, may bring cases before the court.

In Norway, also, individuals are precluded from bringing cases before the Labour Court. Furthermore, local questions arising out of the interpretation and application of agreements are referred in the first instance to the regular courts. The Labour Court is thus reserved for questions of national scope or for appeals. In other respects the legislation in Norway and Sweden is substantially similar.

Union Health and Welfare Plans in the United States

A BULLETIN describing collective bargaining developments in union health and welfare plans in the United States has been published by the United States Bureau of Labour Statistics. It reports that the number of workers covered by some type of health benefit plan has more than doubled since 1945, reaching approximately 1,250,000 early in 1947. Except for a few outstanding exceptions, notably the coal mines, the increment is the result of extended programs, rather than the adoption of such schemes by other unions, the bulletin reports.

Most plans studied provide for financing by the employer alone, the usual agreement calling for a two to three per cent of payroll contribution. In regard to administration, plans were of one of three categories: (1) those administered by the union solely, (2) plans administered jointly, and (3) programs administered by a private insurance company out of a fund or premiums paid by the employer. The plans contain provisions for weekly cash payments for disability from non-occupational accidents, hospital and surgical expenses, and frequently payment of doctor bills. Dental care and preventive medicines are not usually included.

The first Union Health Centre of the International Ladies' Garment Workers' Union (AFL) was established in 1912 in New York City, and still functions. In addition to furnishing medical care to garment workers at the Centre, it inspects sick-benefit plans and

serves as a health education centre. It is concerned primarily with ambulatory cases—in the nature of a clinic. It does not offer service to the families, nor complete medical service to the members, and its financing varies with the craft. In addition to cash benefit payments, and clinical medical services, the program provides some preventive medical care. The eye conservation plan, which provides that every shop is to be visited and each worker examined, is unique. For 17 years the Centre also provided dental care, but discontinued this service for organizational reasons.

A recent health-benefit plan negotiated by the St. Louis Joint Council, United Retail, Wholesale, and Department Store Employees (CIO), referred to as the St. Louis Plan, is of interest in that a health institute was established, through employer contribution, which offers complete medical services. Every medical bill of members and their families, for service in the home, hospital, or clinic, is to be met by the St. Louis Labour Health Institute. The organizational plans as outlined in 1945 would open the institute not only to union members and the non-voting families, but also to outsiders as non-voting approved participants. This may result in a union health-benefit plan that will include many unions jointly in the St. Louis area the bulletin states.

In coal mining, both anthracite and bituminous, the coal miners secured, as a result

of negotiations in May and June 1946, provisions in their current agreements whereby about 450,000 miners (375,000 bituminous, 75,000 anthracite) in 3,000 mines in 23 States are to achieve a considerable measure of security through the operation of welfare funds.

In the soft-coal industry (Government operated), one fund, designated as a "welfare and retirement fund," is to be raised by levying a tax of 5 cents on each ton of soft coal produced. It is to be administered by three trustees—one appointed by the U. S. Coal Mines Administrator, one by the union, and one jointly. A second fund, designated as a "medical and hospital fund," is to be accumulated from wage deductions presently being checked off from miners' wages, or authorized in the future by the union. This fund is to be turned over to the union, and is to be administered by trustees appointed by the president of the United Mine Workers of America (AFL). The agreement calls for co-operation between the trustees of the two funds.

For the anthracite industry, a fund is to be raised similarly by a tax of 5 cents on each ton. This is a welfare and retirement fund, and is to be administered by three trustees—two to be appointed by the president of the United Mine Workers and one by the operators.

The technique of levying a tax on coal produced for the establishment and maintenance

of a welfare fund is one that has been in existence in countries other than the United States for a number of years: Great Britain has had such a practice since 1936, and British India and Spain more recently the bulletin reports.

The bulletin holds that current interest in welfare negotiations is expanding. Spokesmen for both labour and management and the public, it reports, are constantly attesting to the growing concern over the provision of adequate welfare benefits for workers. "There is," it states, "no doubt, from past practice and current statements of unions, from recent management concern with welfare funds and their bargaining importance, from recent interest of the medical profession in the role of labour and management in industrial health, from the general interest of a considerable portion of the public in the Nation's health, that welfare funds and health benefits will play an increasingly important role in future contract negotiations."

While claiming that there is general acceptance of the increasing importance of health benefit plans under collective bargaining, the bulletin contends that the method of financing is not clearly defined. The tendency toward employer-financed schemes, precipitated by the rigid wage control of the war period, may, now that payments in lieu of wages are no longer necessary to secure benefits in a tight labour market and taxes on profits liberalized give way to jointly-contributed-to welfare funds.

Trends in Department Store Unionization

THE *Management Record*, a publication of the National Industrial Conference Board, an employers' service organization functioning in New York City, reports in the June issue the findings of a survey undertaken into department store unionization trends.

It states that the two outstanding labour organizations operating in the retail field are the Retail Clerks International Protective Association (AFL), and the United Retail Wholesale and Department Store Workers (CIO).

"The AFL union was organized in 1890, and reports a membership of about 250,000 in the United States, Canada and Puerto Rico. It claims jurisdiction over 'all employees of stores, mercantile and mail-order establishments who are actively engaged in handling or selling merchandise.' The CIO union was organized in 1937 by a group of local unions that were formerly affiliated with the AFL organization. These locals were expelled by the AFL union because they became part of the Committee for Industrial Organizations.

The union places its membership at 125,000 and its jurisdiction as covering 'persons employed in and about retail, wholesale, department store, warehouse and production establishments.'"

"Although membership in unions of retail workers has increased rapidly in the past decade, it is still relatively small. Out of 5,948,000 workers estimated to be employed in retailing (including automobile services), there are about 375,000 salespeople and related personnel in unions. Organizing drives have recently been intensified among retail workers, just as in other white-collar fields. There are very few independent unions in retail establishments, and their numbers are proportionately much smaller than the independent unions in other sectors of the economy."

Jurisdictional disputes, the article states, have developed as between locals within the same parent body as well as between AFL and CIO unions.

In the field of political action, as in other industries "members of labour unions in retailing do not all follow one political line. The basic difference between the AFL and CIO unions is that the CIO unions are interested in domestic and international political activities and the AFL unions usually follow a non-political line. However, representatives of AFL locals in certain areas sometimes try to influence their membership to support a particular candidate running for some public office.

"In most instances, the unions of retail clerks come under the jurisdiction of state rather than federal labour laws. Where the unions cannot look to the National Labour Relations Act or to a state labour relations act, they will utilize their economic strength with the support of other local labour unions.

"As indicated by recent convention reports, both unions of department store employees will continue to intensify their organization drives in this country and Canada. Appropriations for this purpose total hundreds of thousands of dollars. Department store employees are dissatisfied partly, it is said, because they feel that their employers regard many of them as 'old retainers,' who receive wages below others in the community but who nevertheless are glad to stay on their jobs because of the cleanliness and personable nature of the work. It is not the 'old retainers' who have been spearheading the drive for unionization. Employers of retail workers say that some of their salesmen earn more than the highest paid craftsmen in industry.

"The workers frequently complain that the company interests itself in the wages and working conditions of its employees only when union organizing circulars appear. But some department stores have carried on considerable research and training in an effort to understand their employees' thinking on company wage and general personnel policies. Contracts have included clauses covering wages, seniority patterns, and grievance and arbitration procedures similar to those in other industries.

"On the question of salaries, an outstanding eastern department store executive sums up the attitude of many employers with the statement that he does not 'know of any situation where there is as wide a spread between minimum and maximum wages as among department store clerks.' Another factor stressed by executives is that many retail clerks use department store jobs as stop-gaps between other jobs, thus creating an unusually high turnover among workers in the minimum wage brackets. This condition causes an almost

static minimum among certain categories of employees.

"Retailers are developing a desire to do studies on retail job analysis and evaluation. However, there is not complete agreement among department store executives and retailers generally in regard to organized job analysis and evaluation as an approach to salary administration problems. The catch-as-catch-can method of determining wage policies is still part of the picture, particularly during periods of tight manpower markets when stores will pay relatively high wages for hard-to-get personnel.

"In 1946, Donald A. Fowler, Chairman of the National Retail Dry Goods Association Committee on Better Selling, stated that 'developments since V-J Day have confirmed the basic necessity for sound job analysis and evaluation if retailers are to meet the challenge ahead. When the present backlog of consumer demand for essential merchandise is satisfied, many retailers will find themselves confronted with a wage structure which will be difficult to carry. These changes in employee working schedules and wage rates can be supported ultimately only through more efficient production.'

"Collective-bargaining units in twenty department store contracts analyzed differ from those in industrial agreements in that they usually exclude a long and highly specialized list of employees. In the industrial contracts, it is found that 'supervisory employees' are excluded as a group, while in the department store agreements, in addition to omitting them as a group, classifications are broken down and 'buyers, assistant buyers, department managers, assistant department managers, store managers, and section managers' are excluded individually. Groups of employees peculiar to the department store, such as lease department employees, comparison shoppers, and heads of stock, are also specifically excluded from the agreements.

"Purchase discounts for employees and the payment of supper money on late nights are included in a number of department store contracts. These provisions are peculiar to department stores.

"Analysis of twenty union security clauses shows that the majority are covered by union shop agreements, with only one membership-maintenance clause in the twenty contracts.

"Although work rules do not appear in the contracts, the right to establish rules and regulations is retained by management, with right of appeal by employees through established grievance procedures.

"Three of the twenty department store contracts indicate apprentice wage rates. Duties and job classification are not stated in any of the contracts.

"Extra compensation for work on different shifts is not provided, although provisions are made for extra compensation for work done outside regular store hours. The nature of the department store, as a caterer to the public, makes hourly schedules more stable than in industry, say department store executives. As to hours, the majority of general industry contracts show a five-day week, while the department stores indicate a six-day week. This also stems from the nature of the business operations and policy.

"Call-in pay is provided for in seven of the twenty agreements, but, unlike agreements in the general industries, no provision is made for payment in case of temporary discontinuance of employment.

"General industries usually specify the number of holidays which are paid or not paid if the employees do not work, while provisions in department store agreements specify time

off for certain holidays. In all twenty department store agreements employees are paid for the holiday time.

"In seven of the agreements, the union representative is specifically allowed time off without pay.

"The only contingencies allowed for absence are personal sickness or serious injury.

"Many factors relating to wages and working conditions and discount plans for employees are part of department store personnel policies. Yet, they are not incorporated into collective-bargaining agreements. This is because, say some store executives, certain patterns relating to wages and working conditions were part of store rules long before the collective-bargaining unit came into the picture.

"There is a noticeable development of programs, by personnel executives, evaluating the various phases of labour-management relationships. A personnel consciousness in department store line executives seems to be growing as a result of training programs."

Industrial Disputes and Conciliation

INTRODUCTION

THE *Industrial Disputes and Conciliation* section contains monthly articles concerning proceedings under the *Wartime Labour Relations Regulations, P. C. 1003*, and under the *Conciliation and Labour Act*.

During the war and its aftermath, the Dominion Wartime Labour Relations Regulations (P.C. 1003) of February 13, 1944, which suspended the Industrial Disputes Investigation Act, enacted first in 1907, have required employers to negotiate with the representatives of their employees and provided machinery for the settlement of disputes.

At the present time the Regulations apply only to industries within the legislative authority of Parliament, including navigation and shipping, lines of steam or other ships, railways, airlines, canals, telegraph, telephone and radio communication, ferries, and works situated in a province but which have been or may be declared by Parliament to be for the general advantage of Canada or two or more provinces. Jurisdiction over war industries and industries within the scope of certain provinces which entered into wartime agreements with the Dominion, has now reverted to the provinces. (A summary of the present position with respect to labour relations legislation in Canada appears in the July issue of the *LABOUR GAZETTE*, pp. 940-943.)

The Regulations, which were issued under the authority of the War Measures Act, are continued in effect under the continuation of Transitional Measures Act, 1947. A Bill incorporating many of the features of the Regulations, with modifications and additions, was introduced in the House of Commons on June 17, 1947, but was allowed to stand over until the next session of Parliament (see elsewhere in this issue, p. 1102).

The Regulations are administered by the *Wartime Labour Relations Board (National)* in respect of those provisions relating to: the certification of bargaining representatives,

the intervention of the Board for the purpose of obtaining conciliation services from the Minister of Labour, the establishment of procedures for the final settlement of disputes concerning the interpretation or violation of collective agreements, and the institution of prosecution proceedings.

The provisions of the Regulations relating to conciliation services are under the administration of the Minister of Labour and are provided to parties desiring to negotiate agreements through the formal intervention of the Board.

The Board, with the approval of the Minister of Labour, has adopted rules or regulations which govern procedure in making the various types of applications invoking the provisions of the Regulations and the services of the Board. Copies of these procedural regulations and of the *Wartime Labour Relations Regulations, P.C. 1003*, may be obtained from the Department of Labour, Ottawa.

Proceedings under the Regulations are here described in two separate articles. The first deals with applications made to the Board for the certification of bargaining representatives and other services, and records the decisions reached in such matters; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also provided through the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act. This Act empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together and to appoint a conciliator or arbitrator when requested by the parties concerned.

Applications Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Board (National) met for two days during the month of July. During the month the Board received 36 applications for certification (2 of which were withdrawn during the month), issued 11 certificates designating bargaining representatives, rejected 3 applications, ordered 5 representation votes.

The Board also received 5 applications for leave to prosecute, 3 of which were granted and 2 refused.

The Board held 9 hearings and issued Reasons for Judgment covering the rejection of 3 applications for certification, decision upon which had been given previously.

Applications Granted for Certification of Bargaining Representatives

1. *Communications Unit No. 1 of the Federation of Employee-Professional Engineers and Assistants* and certain officers and persons for the employees of *The Bell Telephone Company of Canada* performing the duties of foreign wire relations engineer, engineer, assistant engineer, and engineering assistant (excluding engineering assistants who are within the Plant Employees' Association certification) in the Division Plant Engineering Groups, Western Area and for the employees performing the duties of engineer, assistant engineer, engineering assistant and student engineer in the Engineering Department, Western Area, but excluding supervising engineers.**

2. *Cargo and Gangway Watchmen's Union (Local 1720, International Longshoremen's Association)* and certain of its officers for cargo and gangway watchmen employed at Saint John, N.B., by various steamship companies and agencies, represented by *The Shipping Federation of Canada*.*

3. *Local 106, International Brotherhood of Teamsters, Chauffeurs, Warehousemen & Helpers of America* and certain of its officers for dockmen, tractor drivers, truck drivers, drivers' helpers and highway drivers employed by the *Kingsway Transport Limited, Montreal*, at Montreal, Sherbrooke, Quebec, Three Rivers and Valleyfield, P.Q., and at Ottawa, Ont. The Board excluded from the bargaining unit foremen and persons of higher rank, despatchers, garage employees, janitors, night watchmen, office workers, and employees on the Toronto and Hamilton, Ont., payrolls of the company, the groups at Toronto and Hamilton being covered by an existing certification.*

4. *Canadian Navigators' Federation* and certain of its officers for personnel employed aboard the ss. *North Coaster* by the *Caribbean Steamship Co. Limited, Montreal*, in the following classifications, first, second and third officer, and second, third and fourth engineer. The captain and the chief engineer were excluded from the bargaining unit.*

5. *Canadian Navigators' Federation* and certain of its officers for personnel employed aboard the ss. *Magdalen* by *Magdalen Islands Transportation Co. Limited, Montreal*, in the classifications of first and second officer, and second and third engineer. The captain, the chief engineer, the chief steward and the purser were excluded from the bargaining unit.*

6. *Canadian Navigators' Federation* and certain of its officers for personnel employed aboard the ss. *Island Connector* by the *Inter Island Steamship Co. Limited, Montreal*, in the classifications of first, second and third officer, and second, third and fourth engineer. The captain, the chief engineer and the chief steward were excluded from the bargaining unit.

7. *Canadian Navigators' Federation* and certain of its officers for personnel employed aboard the ss. *Gulf Port* by the *Gulf Ports Steamship Co. Limited, Montreal*, in the classifications of first, second and third officer, and second, third and fourth engineer. The captain and the chief engineer were excluded from the bargaining unit.*

8. *Canadian Navigators' Federation* and certain of its officers for personnel employed aboard the ss. *North Pioneer* by *North Pioneer Steamship Co. Limited, Montreal*, in the classifications of first, second and third officer, and second, third and fourth engineer, and assistant purser. The captain, the chief engineer, the chief steward and the chief purser were excluded from the bargaining unit.*

9. *Canadian Brotherhood of Railway Employees & Other Transport Workers* and certain of its officers for clerks and messengers employed by *Canadian National Railways* in the "WI" office of the Railway Telegraph Department at Winnipeg.*

10. *National Association of Marine Engineers of Canada, Inc.*, and an officer for engineering officers, including the chief engineers, employed by *Niagara, St. Catharines and Toronto Railway Company (Canadian National Steamers)* on vessels operating between Port Dalhousie, Ont., and Toronto.*

11. *Canadian Brotherhood of Railway Employees & Other Transport Workers, Division 32*, and certain of its officers for stationary engineers employed by *Canadian National Railways* in the engineer's department of the Prince Arthur Hotel, Port Arthur, Ont. The chief engineer was excluded from the bargaining unit.*

Applications for Certification Rejected

1. *Canadian Seamen's Union* affecting unlicensed personnel employed by the *Davie Shipbuilding and Repairing Co. Limited, Lauzon, P.Q.*, on the Tugs ss. *Busy Bee*, ss. *Chateau* and ss. *Manoir* (L.G., May, 1947, p. 661). Following a hearing, the Board rejected the application for the reason that the tugging operations carried on by the company were incidental to its shipbuilding

* Following an investigation of the application.

** Following an investigation of the application and a representation vote.

activity, the application thus falling within the jurisdiction of the Quebec provincial authorities.

2. *Canadian Brotherhood of Railway Employees & Other Transport Workers* affecting certain employees of *Canada Coach Lines, Limited, Hamilton, Ont.* (L.G., June, 1947, p. 795). Following the taking of a representation vote ordered by the Board, the application was rejected for the reason that it did not have the support of a majority of the employees affected, 113 employees voting for the applicant organization out of 300 who cast ballots. Some 322 were eligible to vote.

3. *National Association of Marine Engineers of Canada, Inc.*, affecting marine engineers employed by the *Upper Lakes & St. Lawrence Transportation Co. Limited, Toronto* (L.G., July, 1947, p. 958). Following the taking of a vote of the marine engineers, excluding chief engineers, employed on the 27 vessels operated by the company, the Board rejected the application for the reason that it did not have the support of a majority of the employees affected. Out of 48 employees eligible to vote, 13 voted for the applicant organization.

Representation Votes Ordered

1. *Canadian Brotherhood of Railway Employees & Other Transport Workers; Hull City Transport Employees' Syndicate*, applicants, and *Hull City Transport Limited, Hull, P.Q.* (L.G., July, 1947, pp. 958, 959). Following an investigation of the two applications, the Board ordered a representation vote of the chauffeurs and garage employees, with the names of both applicant organizations on the ballot and excluding the office employees from the unit. Messrs. R. H. Taber and E. H. Menard, Ottawa, were appointed by the Board as Returning Officers to supervise the ballot.

2. *Local 508, International Longshoremen's & Warehousemen's Union, and Empire Stevedoring Co. Limited, Vancouver* (L.G., July, 1947, p. 958). Following an investigation of the application, the Board ordered a representation vote of deepsea longshoremen employed by the company in the ports of Chemainus, Crofton, Ladysmith and Nanaimo, B.C. The names of the applicant organization and of Local 38/164, International Longshoremen's Association, will appear on the ballot. Mr. G. R. Currie, Industrial Relations Officer, Vancouver, was appointed as Returning Officer to supervise the vote.

3. *Local 508, International Longshoremen's & Warehousemen's Union, and Canadian Stevedoring Co. Limited, Vancouver* (L.G., July, 1947, p. 958). Following an investiga-

tion of the application, the Board ordered a representation vote of deepsea longshoremen employed by the company in the ports of Chemainus, Crofton, Ladysmith and Nanaimo, B.C. The names of the applicant organization and of Local 38/164, International Longshoremen's Association, will appear on the ballot. Mr. G. R. Currie, Industrial Relations Officer, Vancouver, was appointed as Returning Officer to supervise the vote.

4. *Canadian Seamen's Union, and Brit-american, Limited, Vancouver* (L.G., July, 1947, p. 959). Following an investigation of the application, the Board ordered a representation vote of the unlicensed personnel of the deck, engine room and steward's departments on the Tanker *Britamerican*, excluding the purser from the unit. The names of the applicant organization and of the Seafarer's International Union of North America, will appear on the ballot. Mr. G. R. Currie, Industrial Relations Officer, Vancouver, has been appointed Returning Officer to supervise the vote.

5. *International Brotherhood of Electrical Workers, Local B1405, and Arctic Radio Corporation, Flin Flon, Man.* (L.G., July, 1947, p. 959). Following an investigation of the application, the Board ordered a vote of the employees affected, excluding the manager, the janitor and the sports caster from the bargaining unit. Mr. R. H. Hooper, Industrial Relations Officer, Winnipeg, has been appointed Returning Officer to supervise the vote.

Applications for Certification Withdrawn

1. *Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express and Station Employees and Canadian Pacific Air Lines, Limited, Winnipeg* (L.G., April, 1947, p. 525). Following an investigation of the application and a hearing of the parties concerned, including the Order of Railroad Telegraphers and the International Association of Machinists, the application was withdrawn by the Vice-President of the applicant organization.

2. *Canadian Seamen's Union and Driftwood Lands and Timber Limited, Sault Ste. Marie, Ont.* (L.G., June, 1947, p. 795). The application was withdrawn by an officer of the applicant organization.

3. *Canadian Navigators' Federation and Charlevoix-Saguenay Navigation Co. Limited, Montreal (M.V. Jacques Cartier)* (L.G., June, 1947, p. 796). The application was withdrawn by an officer of the applicant organization.

4. *Canadian Union of Boilermakers & Iron Shipbuilders, Local 3, and Davie Shipbuilding and Repairing Co. Limited, Lauzon, P.Q.*

(unlicensed personnel on Tugs ss. *Busy Bee*, ss. *Chateau*, ss. *Manoir* (L.G., July, 1947, p. 959). Following an investigation of the application and a hearing of the parties, the application was withdrawn by the President of the applicant organization.

5. *Canadian Seamen's Union and Lower St. Lawrence Transport Co. Limited, Rimouski, P.Q.* (unlicensed personnel on ss. *Jean Brillant*, ss. *Matane* and ss. *Rimouski*) (L.G., July, 1947, p. 959). The application was withdrawn by the Vice-President of the applicant organization.

6. *Canadian Union of Boilermakers & Iron Shipbuilders, Local 3, and Davie Shipbuilding and Repairing Co. Limited, Lauzon, P.Q.* (engineers on Tugs ss. *Busy Bee*, ss. *Chateau*, and ss. *Manoir*) (L.G., July, 1947, p. 959). This application was received from and withdrawn by the applicant organization during July.

7. *National Association of Marine Engineers of Canada, Inc., and Standard Oil Co. of British Columbia, Vancouver*, covering a unit of marine engineers. This application was received from and withdrawn by the applicant organization during the month of July.

Applications for Certification Received During the Month of July, 1947

1. *Canadian Seamen's Union* on behalf of unlicensed personnel of the ss. *Pelee* operated by *The Pelee Shipping Company, Limited, St. Thomas, Ontario*.

2. *Canadian Brotherhood of Railway Employees and Other Transport Workers, Division No. 32*, on behalf of stationary engineers employed in the engineer's department of the *Prince Arthur Hotel, Port Arthur, Ontario*, by the *Canadian National Railways*. This application was certified during the month; see also under "applications granted" this article.

3. *Canadian Union of Boilermakers and Iron Ship Builders, Local 3*, on behalf of chief and second engineers employed on Tugs ss. *Busy Bee*, ss. *Chateau* and ss. *Manoir* by the *Davie Shipbuilding and Repairing Company Limited, Lauzon, P.Q.* This application was withdrawn during the month.

4. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of the *Canada Steamship Lines, Limited, Montreal, P.Q.*

5. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Paterson Steamships Limited, Fort William, Ontario*.

6. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels operated by *Upper Lakes and St. Lawrence Transportation Company, Limited, Toronto, Ontario*.

7. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of the *Quebec and Ontario Transportation Company Limited, Montreal, P.Q.*

8. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Branch Lines Limited, Sorel, P.Q.*

9. *Canadian Seamen's Union* on behalf of unlicensed crew, including deckhands, watchmen, wheelsman, cooks, second cooks, firemen, boilers and quarters, of ss. *Makaweli*, operated by *Lakeland Tankers Limited, Toronto, Ontario*.

10. *Flin Flon Base Metal Federal Union No. 172* on behalf of hourly-rated employees in the research department of the *Hudson Bay Mining and Smelting Company Limited, Flin Flon, Manitoba*.

11. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Northwest Steamships Limited, Toronto, Ontario*.

12. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *National Sand and Material Company Limited, Toronto, Ontario*.

13. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Hindman Transportation Company Limited, Owen Sound, Ontario*.

14. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Maritime Towing and Salvage Limited, Halifax, N.S.*

15. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Foundation Maritime Limited, Halifax, N.S.*

16. *Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 182*, on behalf of all employees of the *Toronto Terminals Railway Company, Toronto, Ontario*, employed in the restaurant (oak room, lunch room and soda fountain), consisting of cashiers, waitresses, waiters, chefs, cooks, etc., except the supervisor in charge.

17. *National Association of Marine Engineers of Canada, Inc.*, on behalf of marine engineers employed by *Standard Oil Company of British Columbia, Limited, Vancouver, B.C.* This application was withdrawn during the month.

18. *National Association of Marine Engineers of Canada, Inc.*, on behalf of marine engineers employed by *Britamerican Limited, Vancouver, B.C.*

19. *National Association of Marine Engineers of Canada, Inc.*, on behalf of Marine engineers employed by the *Shell Oil Company of British Columbia Limited, Vancouver, B.C.*

20. *National Association of Marine Engineers of Canada, Inc.*, on behalf of licensed engine room personnel and electricians employed on *M.V. Huascaran* by *North American Transport Company Limited, Montreal, P.Q.*

21. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Sincennes-McNaughton Line Limited, Montreal, P.Q.*

22. *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees* on behalf of red cap porters employed at the *Vancouver Station* by the *Canadian Pacific Railway Company.*

23. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Lloyd Tankers Limited, Toronto, Ontario.*

24. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of the *Lake Erie Navigation Company Limited, Walkerville, Ontario.*

25. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Great Lakes Lumber and Shipping Limited, Fort William, Ontario.*

26. *Canadian Seamen's Union* on behalf of quartermasters, deckhands, oilers, firemen, first and second cooks, messmen, and porter employed by *Northumberland Ferries Limited, Charlottetown, P.E.I.*

27. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Algoma Central Steamship Company, Sault Ste. Marie, Ontario.*

28. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Abitibi Navigation Company, Limited, Toronto, Ontario.*

29. *Canadian Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Coal Carriers Corporation Limited, Brockville, Ontario.*

30. *National Association of Marine Engineers of Canada, Inc.*, on behalf of chief engineers, second engineers and third engineers employed on *ss. Bruce Hudson* and *ss. Joan Virginia* by *Lloyd Tankers Limited, Toronto, Ontario.*

31. *National Association of Marine Engineers of Canada, Inc.*, on behalf of the chief, second, third, fourth and fifth engineer employed on the *ss. Coalfax* by *Coal Carriers Corporation Limited, Brockville, Ontario.*

32. *National Association of Marine Engineers of Canada, Inc.*, on behalf of chief engineers and second engineers employed on the *Tugs Edward C. Whelan* and *Lisgar* by *Consolidated Bridging Company Limited, Fort William, Ontario.*

33. *Canadian Lake Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Canada Steamship Lines, Limited, Montreal, P.Q.*

34. *Yellowknife District Miners' Union (Local 802, International Union of Mine, Mill & Smelter Workers)* on behalf of sewer and water project employees, except the general foreman, superintendent and office staff, of *Northern Construction Company and J. W. Stewart Limited, Yellowknife, N.W.T.*

35. *Canadian Lake Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Sarnia Steamships Limited, Sarnia, Ontario.*

36. *Canadian Lake Seamen's Union* on behalf of unlicensed personnel employed on vessels of *Colonial Steamships Limited, Sarnia, Ontario.*

Applications for leave to prosecute GRANTED

1. *Canadian Seamen's Union*, applicant, and *Canada Steamship Lines, Limited.*

2. *Canadian Seamen's Union*, applicant, and *Colonial Steamships Limited, and Captain Scott Misner.*

3. *Canadian Seamen's Union*, applicant, and *Sarnia Steamships Limited, and Captain Scott Misner.*

The Board separately granted the three applications mentioned above, finding in each case that collective agreements had been entered into between the union and each of the three companies under date of September 3, 1946.

The union had alleged a breach of the *Wartime Labour Relations Regulations, P.C. 1003*, by the companies and officials who were said to have refused to issue passes to representatives of the union which would permit them to board vessels, as provided in the collective agreements between the companies and the union, and to have issued such passes to another labour organization.

In giving its decisions, the Board expressed the hope that the parties would make a

settlement of their differences without recourse to court proceedings.

REFUSED

1. *Hull City Transport Limited, Hull, P.Q.*, applicant, and the *Canadian Brotherhood of Railway Employees and Other Transport Workers and Mr. J. E. Dore and Mr. L. Rivet*.

The Board refused the company leave to prosecute the union and the two persons who were said to have attempted to organize the employees of the company into the union during working hours at their place of employment, thereby allegedly violating Section 20(2) of the Regulations.

The Board announced that Reasons for Judgment would be given in the matter at its next meeting.

2. *Canadian Seamen's Union*, applicant, and *Captain Scott Misner, President, Colonial Steamships, Limited, and Sarnia Steamships, Limited, and Captain Norman Reoch, Oper-*

ating Manager, Canada Steamship Lines, Limited.

The Board refused its consent to the prosecution of Captain Scott Misner and Captain Norman Reoch. The application had alleged that the two officials had violated the Regulations by offering financial support to an official of the union.

The Board announced that Reasons for Judgment would be given at its next meeting.

Reasons for Judgment issued during July

1. *Quebec Longshoremen's Union, Local 1*, applicant, and *Albert G. Baker Limited, Anglo-Canadian Pulp and Paper Mills Limited, and Canadian Import Company Limited, Quebec, P.Q.* In the July issue of the *LABOUR GAZETTE* (p. 958) it was reported that these three applications had been rejected and that Reasons for Judgment would be given. The Board has given Reasons for Judgment as follows:—

Between: Quebec Longshoremen's Union, Local No. 1, Applicant, and Albert G. Baker Limited; Anglo-Canadian Pulp and Paper Mills Limited; Canadian Import Company Limited; Quebec, P.Q., Respondents and Quebec Ship Labourers' Benevolent Society Intervener.

The Board consisted of the Vice-Chairman and Messrs. Best, D'Aoust, Deschamps, Hills and Picard.

Reasons for Judgment

These are three applications, dated April 16, 1947, submitted by the Quebec Longshoremen's Union, Local No. 1, for certification of bargaining representatives for a bargaining unit consisting of employees employed at Quebec and Levis Harbour as longshoremen by each of Albert G. Baker Limited, Anglo-Canadian Pulp and Paper Mills Limited, and Canadian Import Company Limited, but excluding therefrom men who worked less than two months on such work during the shipping season. Subsequent to the filing of these applications, the applicant asked that for purpose of certification the Board use, as a standard for making a check of union membership, those employees employed as longshoremen appearing on the company payroll in each case at the opening of the 1947 navigation season. The applicant claimed to have as members a majority of such employees.

The Albert G. Baker Limited operates a master stevedoring business and supplies longshore labour at Quebec to a number of firms in the shipping business. At the first payroll date following the opening of the shipping season there were some 115 longshoremen on the company payroll.

Anglo-Canadian Pulp and Paper Mills Limited state that at the time of application they had not hired any longshore labour and did not expect to do so until some time in June, 1947.

In the case of the Canadian Import Company Limited there were some 71 longshoremen on the company payroll at the first payroll date following the opening of the navigation season.

The applications were opposed by the Quebec Ship Labourers' Benevolent Society.

Facts as disclosed are that for many years longshore or ship-loading labour has been supplied to shipping and import firms during the shipping season at Quebec and Levis Harbour by the Quebec Ship Labourers' Benevolent Society, from members of the organization which constitutes a longshoremen labour pool. The shipping season extends over some thirty weeks during the year and there are some 300 longshoremen in this group who are regularly assigned during the season for such work. To the extent that the required labour cannot be supplied from this group, casual workers from other sources are drawn on by employers for this purpose.

In the case of master stevedoring firms, such as the Albert G. Baker Limited, the company hires the men to carry out the firm's stevedoring contracts with various shipping or importing companies. In other cases, the

shipping or importing company hires directly through the Society.

In 1940, a collective agreement was entered into between the Shipping Federation of Canada, representing the great majority of the stevedoring and shipping companies operating in the port of Quebec and Levis, and the Society. This agreement was signed May 17, 1940, and by its terms was to continue in force until December 31, 1940, and thereafter from year to year unless or until either party served written notice on the other party at least sixty days prior to December 31, 1940, or sixty days prior to December 31 of any subsequent year. The Society claims that this agreement is still in force and operates as a bar to any application for certification at this time in so far as such applications for certification affect companies who are parties to the agreement. The companies whose names appear in the agreement are nine in number and include the Albert G. Baker Limited and Canadian Import Company Limited. These employers comprise, we are advised, the majority of the companies using longshore labour from the pool. The Society further claims that all members of the longshoremen group are members of the Society and that such of these men as are also members of the applicant organization do not constitute a majority of the said group.

The Board is of opinion that an appropriate bargaining unit comprising longshore labour at Quebec and Levis Harbour would be one consisting of the group of men regularly employed during the shipping season as longshoremen at Quebec and Levis Harbour by the firms and agencies hiring this class of labour. Men employed from other sources

intermittently as casual longshore labour, as distinguished from the foregoing, would not be appropriate for inclusion in this unit as they have not the same continuing or substantial interest in the working conditions applicable to this group.

The Board is of opinion that these applications should be rejected on the following grounds, namely:—

1. The applicant has not satisfied the Board that it has as members, within the meaning of section 5 (2) of the Regulations, the majority of employees in an appropriate bargaining unit.

2. Considering that the longshore group, with respect to which certification is desired, has provided longshore labour over a period of years to all employers at Quebec and Levis Harbour belonging to the Shipping Federation, as well as to other employers at this port, the Board is not disposed to consider applications affecting longshoremen employed by only a small minority of these employers, and where these employers employ less than a majority of longshore labour, without having before it at the same time applications with respect to the other employers employing longshore labour from the same group.

J. LESAGE, Esq.,

G. D. DELANEY, Esq.,
for the Intervener.

Dated at Ottawa, July 29, 1947.

Conciliation Proceedings Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlement of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National), and, until May 15, 1947, such disputes in certain provinces were also referred to the Minister by the Provincial Boards in their respective jurisdictions. The Minister then appoints a Conciliation Officer to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about

settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Conciliation Board, a Board is then established by the Minister. The duty of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

I Assignment of Conciliation Officers

During July, 1947, Conciliation Officers were assigned to confer with the parties in an attempt to effect an agreement in the following cases:—

Canadian National Railways (Sleeping, Dining and Parlour Car Dept.) and Canadian

Brotherhood of Railway Employees and Other Transport Workers (CCL). Bernard Wilson, Conciliation Officer. (*See also III*).

Canadian National Steamships (Pacific), Canadian National Railways (B.C. Coast and Lakes Barge and Ferry Service), Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Union Steamships, Ltd., and Frank Waterhouse & Co. Ltd., and Canadian Merchant Service Guild (TLC). G. R. Currie, Conciliation Officer.

National Harbours Board, Vancouver, B.C., and Brotherhood of Railroad Trainmen. G. R. Currie, Conciliation Officer.

II Agreements Facilitated by Conciliation Officers or Applications Withdrawn

In the following cases, reports were received during July, 1947, from Conciliation Officers indicating the successful completion of negotiations with the signing of an agreement or the withdrawal of the application for intervention:—

Arctic Ice Co. Ltd., Winnipeg, Man., and Arctic Ice Employees' Unit, One Big Union. R. H. Hooper, Conciliation Officer.

Thos. Jackson & Sons Ltd., Winnipeg, Man., and Truck Drivers' Unit, One Big Union. H. S. Johnstone, Conciliation Officer.

McCurdy Supply Co. Ltd., Winnipeg, Man., and Truck Drivers' Unit, One Big Union. H. S. Johnstone, Conciliation Officer.

J. S. Nairn, Sydney, N.S., and Cape Breton Quarrymen's Union (CCL). H. R. Pettigrove, Conciliation Officer.

National Harbours Board (Grain Elevators at Montreal and Quebec, P.Q., and Cold Storage Plant at Montreal, P.Q.) and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (AFL-TLC). J. S. McCullagh, Conciliation Officer.

III Boards Established

During the month, Conciliation Boards were established to deal with disputes between the following parties:

Canadian National Railways (Sleeping, Dining and Parlour Car Dept.) and Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL). Bernard Wilson, Conciliation Officer. (*See also I*).

Canadian Pacific Railway Co. (Dining, Cafe and Buffet Car Employees) and Brotherhood of Railroad Trainmen. Bernard Wilson, Conciliation Officer.

Recommendations of Conciliation Officers Referred to Provincial Ministers of Labour

In the following case, a Conciliation Officer was appointed by the Minister of Labour before May 15, 1947, to deal with a dispute now falling within Provincial jurisdiction and he reported during the month of July that he had been unable to effect a settlement of the dispute and recommended the establishment of a Conciliation Board, and his recommendation was referred to the Minister of Labour for Manitoba:—

Bulman Bros. Ltd., Winnipeg, Man., and Local 31, Amalgamated Lithographers of America. H. S. Johnstone, Conciliation Officer (*vice* R. H. Hooper).

IV Boards Fully Constituted

Canadian National Railways (Freight Handlers on Montreal Wharf). The Conciliation Board established to deal with a dispute between Canadian National Railways (Freight Handlers on Montreal Wharf) and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (AFL-TLC) was fully constituted on July 7, 1947, with the appointment of His Honour Judge C. E. Guerin, Montreal, as Chairman of the Board, on the joint recommendation of the other two members of the Board, T. R. Meighen, K.C., Montreal, and M. W. Wright, Ottawa, who had been appointed on the recommendation of the employer and employees respectively.

Canadian Pacific Railway Co. (Freight Handlers on Montreal Wharf) The Conciliation Board established to deal with a dispute between the Canadian Pacific Railway Co. (Freight Handlers on Montreal Wharf) and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (AFL-TLC) was fully constituted on July 7, 1947, with the appointment of His Honour Judge C. E. Guerin, Montreal, as Chairman of the Board, on the joint recommendation of the other two members of the Board, T. R. Meighen, K.C., Montreal, and M. W. Wright, Ottawa, who had been appointed on the recommendation of the employer and employees respectively.

Canadian Pacific Railway Co. (Communications Dept.). The Conciliation Board established to deal with a dispute between the Canadian Pacific Railway Co. (Communications Dept.) and the Commercial Telegraphers' Union, Canadian Pacific System, Division No. 1 (AFL-TLC) was fully constituted on July 31, 1947, with the appointment of His Honour Judge F. W. Schwenger,

Hamilton, as Chairman of the Board, in the absence of a joint recommendation by the other two members of the Board, James P. Pratt, K.C., and Drummond Wren, both of Toronto, who had been appointed on the recommendation of the employer and employees respectively.

Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Canadian National Railways (B.C. Coast and Lakes Barge and Ferry Service), Canadian National Railways (B.C. Coast Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd. The Conciliation Board established to deal with a dispute between the Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Canadian National Railways (B.C. Coast and Lakes Barge and Ferry Service), Canadian National Railways (B.C. Coast Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and National Association of Marine Engineers of Canada Inc. (TLC) was fully constituted on July 18, 1947, with the appointment of J. Edwin Eades, Vancouver, as Chairman of the Board, in the absence of a joint recommendation by the other two members of the Board, G. E. Housser, K.C., and H. Gargrave, both of Vancouver, who had been appointed on the recommendation of the employer and employees respectively.

Boards Reconvened

Snyder's Ltd. On July 22, 1947, the Minister of Labour reconvened the Conciliation Board established to deal with matters in dispute between Snyder's Ltd., Waterloo, Ont., and its employees, members of Local 13, National Union of Furniture Workers and Allied Crafts (CCL). The Board, composed of His Honour Judge A. Cochrane, Brampton, Chairman, and J. E. Ferguson, Toronto, and Dr. Eugene

Forsey, Ottawa, members appointed on the nomination of the employer and employees respectively, submitted an interim report in October, 1946 (*See LABOUR GAZETTE* November 1946, pages 1570-71).

V Board Reports Received

During the month, Board reports were received in the following cases:

Acadian Lines Ltd. (formerly Wagner Tours Ltd.), Halifax, N.S., and Lodge 350, Brotherhood of Railroad Trainmen.

Archibald Coal Co. Ltd., Halifax, N.S., and Local 2, National Union of Coal Distributors (CCL).

Brandon Woollen Mills Co. Ltd., Brandon, Man., and Local 1, Brandon Woollen Mills Union (CCL).

Canadian Industries Ltd., Nobel, Ont., and Local 13031, District 50, Canadian Chemical Division, United Mine Workers of America (AFL-CCL).

City Dray Co., Winnipeg, Man., and Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL).

S. Cunard & Co. Ltd., Halifax, N.S., and Local 2, National Union of Coal Distributors (CCL).

Manitoba Cartage & Storage Ltd., Winnipeg, Man., and Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL).

National Cartage & Storage Ltd., Winnipeg, Man., and Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL).

Thermoid Mould & Tool Works Ltd., Welland, Ont., and Local 523, United Electrical, Radio & Machine Workers of America (CIO-CCL).

Report of Board in Disputes Between Acadian Lines Ltd. (Formerly Wagner Tours Ltd.), Halifax, N.S., and Lodge 350, Brotherhood of Railroad Trainmen, and Between Acadian Lines, Halifax, N.S., and Lodge 234, Brotherhood of Railroad Trainmen.

On July 1, 1947, the Minister of Labour received the Report of the Board of Conciliation, the personnel of which was as follows: Honourable Mr. Justice W. F. Carroll, Halifax, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation by the other two members of the Board, Russell McInnes, K.C., Halifax, and W. T. Hayden, New Glasgow, appointed on the nomination of the employers and employees respectively.

Report of Board

The Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Honourable Sir: The Board of Conciliation established by you on the 3rd day of May, A.D. 1947, did enter upon the work of adjusting the dispute involving rates of pay and working conditions between the above parties. The disputes involving two Companies and two Unions were in general dealt with together.

A typewritten statement was read by Mr. J. J. Hendrick, V.P. of the Brotherhood of Railroad Trainmen and received by the Board, containing an exact history of the circuitous route of the negotiations between the parties, and indicating to some extent the line of cleavage. There was also a copy of the first agreement proposed by the employees, and the result of negotiations thereon reported by your Industrial Relations Officer, Mr. H. R. Pettigrove. Included also was a copy of a reply dated February 17 on behalf of the Companies, including a proposed agreement containing a clause or suggestion that thereafter rates of pay should be on the mileage basis with the rates set out. The acceptance of those rates by the employees would be the acceptance of a considerable cut in wages or pay. Also presented by Mr. Hendrick was a new proposed agreement on behalf of the employees which was placed before your Board as a basis for discussion and negotiation.

There was some general discussion on the whole situation then and afterwards. The representatives of the employers and the accredited bargaining agents of the employees were ultimately given a week to discuss and negotiate on the matters involved and to report results. The Board were not to be present while these discussions were being held. Both parties agreed to the arrangement.

The report was that no agreement was possible.

The Board finally decided that its members would draft an agreement which might be satisfactory to all. The agreement was drafted. It was satisfactory to all the members of the Board as being *fair and reasonable*. It was presented to the Bargaining Agents for the Employees and to Mr. Thompson, who carried on negotiations on behalf of the Employers. The Bargaining Agents for the Employees expressed their willingness to sign the agreement. Mr. Thompson for the Company refused to consider the agreement. A copy of this proposed agreement is annexed hereto and we think should have been accepted by the employers. Indeed, while Mr. McInnes, the employers' representative on the Board, makes a separate report, he is in agreement with the undersigned that it is fair and reasonable and he and Mr. Hayden, the employees' representative, agreed on its terms before presenting it to their respective parties. The Chairman did think that the basic pay of spare bus drivers should be \$120 per month, but the other two members agreed on the amount set out in the agreement, namely, \$125 per month.

The Chairman, having regard to the whole record of negotiations, and what transpired

before the Board, is of opinion that Mr. Thompson, who represented the Companies, had and has little interest in entering into a working agreement with the employees.

We think that the agreement is as already stated a fair and reasonable one and should be accepted by the Employers, as it is in reality the result of an agreement entered into by the members of your Board.

(Signed) W. F. CARROLL,
Chairman.

(Signed) W. T. HAYDEN,
Member.

Minority Report

Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

Dear Mr. Minister:

I have gone over the Agreement being submitted to you by the Chairman of the above named Conciliation Board.

The Companies involved gave their bus drivers a substantial increase in pay on January 1, 1947, and in my opinion a further increase cannot be justified at the present time.

Apart from the wage increase, the differences between the Companies and their bus drivers are only technical and could be agreed upon without difficulty. Generally, I feel that the proposed agreement is fair and reasonable.

I am unable to concur in the finding of the other members of the Board.

Yours very truly,

(Signed) RUSSELL McINNES

Addendum to Report

Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa.

Honourable Sir:

There was sent to me on Saturday morning copies of documents which were sent by Mr. Thompson to his officials in the various terminal stations containing an outline of the proceedings which were both untrue and, in my opinion, a direct interference with the work of the Conciliation Board. Those documents were placed on the bulletin boards at Yarmouth and Truro and, I understand, at Amherst during the course of our negotiations and I want to say that I consider it a clear indication that Mr. Thompson was interfering with the work of the Board in attempting to draw away his employees from dealing further with their representatives.

(Sgd.) W. F. CARROLL

Report of Conciliation Board in Dispute Between Archibald Coal Co. Ltd., Halifax, N.S. and Local 2, National Union of Coal Distributors (CCL).

On July 2, 1947, the Minister of Labour received the Report of the Conciliation Board, the personnel of which was as follows: His Honour Judge K. L. Crowell, Bridgetown, N.S., Chairman, appointed by the Minister on the recommendation of the other two members of the Board, Russell McInnes, K.C. and H. A. Shea, both of Halifax, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour, Ottawa, Canada.

Dear Mr. Minister:

Your Board believes that it has exhausted every possibility of having a collective bargaining agreement signed by the Archibald Coal Company, Limited and your Board submits herewith the following findings:—

- (1) There is no dispute between the employees (members of Local 2) of Archibald Coal Company, Limited and

the said Company as to working conditions, working hours, rates of pay, etc.

- (2) That the members of the bargaining Committee have agreed to sign the agreement submitted with the amendments recommended by the Company, a copy of which you have on file.
- (3) That the said Company refuses absolutely to sign this or any other agreement; this attitude of the Company was again confirmed today.

Your Board recommends that this bargaining agreement together with the Company amendments incorporated therein being fair and reasonable should be entered in by both parties.

(Sgd.) K. L. CROWELL,
Chairman.

(Sgd.) RUSSELL MCINNES,
Member.

(Sgd.) H. A. SHEA,
Member.

Report of Board in Dispute Between Brandon Woollen Mills Co. Ltd., Brandon, Man., and Local 1, Brandon Woollen Mills Union (CCL).

On July 14, 1947, the Minister of Labour received the Report of the Conciliation Board, the personnel of which was as follows: His Honour Judge J. M. George, Morden, Chairman, appointed by the Minister on the joint recommendation of the other two members, R. B. Alexander and B. R. Constable, both of Brandon, who were appointed on the nomination of the employer and employees respectively.

Report of Board

Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

Dear Sir:

The first session of the Board of Conciliation established by you on the 6th day of May, 1947, to deal with above matter was held at Brandon on June 12, at which submissions were made by Mr. W. T. White on behalf of the Union and by Mr. McQuarrie, Solicitor for the Company. Owing to the unavoidable absence of Mr. J. C. Maillard, Manager of the Company, the session was then adjourned to June 23.

At the second session Mr. Maillard made available to the Board copies of the auditor's statement for the private consideration of the members thereof. It was quite apparent at this session that the Company did not take

much exception to a raise in pay, except on the ground that they were financially unable to assume any further liability, and to do so might put the Company out of business. The session resolved itself into a discussion of the financial position of the Company and its possibility of increasing profits by more efficiency of employees through increased wages. This did not seem possible.

The Company had taken over a bankrupt concern four years ago, assuming heavy liabilities. With obsolete machinery and no capital with which to purchase new machinery, and which cannot even be purchased at the present time, the Company is working under a very great handicap. Although making slight progress, it is the opinion of this Board that the Company cannot very well improve its position until it is able to secure more efficient machinery and thereby reduce its operating costs. This does not seem possible at the present moment, and it would appear that any agreement entered into would be by way of experiment to see whether increased wages under present circumstances could be justified, and this the Board suggested to both parties.

It was finally suggested on behalf of the Company, and agreed to on behalf of the Union, that the hearings be adjourned to July 7, in order that the Board might consider

the facts and then bring in at the next session a proposal for consideration. This suggestion was carried out.

In the interval the Board, after careful study of the facts, felt that a slight increase in wages was essential, but this increase must be based, not on a comparison with what other similar mills in Canada are paying, but on the Company's ability to pay, without too greatly endangering its financial structure.

When the hearings re-convened on July 7, the Chairman outlined to both parties the opinion of the Board regarding above matter, and suggested as the unanimous opinion of the Board, that for the present at least, there should be an increase in wages not to exceed 10 per cent of that paid in 1946, which after taking into consideration income tax, meant a net increase of overhead to the Company by approximately $7\frac{1}{2}$ per cent of the wages paid the previous year.

The Board then submitted to them a new schedule of wages on above basis. Mr. Maillard considered them reasonable and admitted his desire to put them into force with certain modification, and the Board was satisfied from the remarks of Mr. White that he was prepared to recommend same to the employees for approval.

Mr. Maillard did, however, object to payment for all statutory holidays named in the Manitoba Minimum Wage Act, where the employee was receiving at least the minimum wage set forth in said Act without payment for holidays, stating that as being within his powers according to his interpretation of said Act. When it was suggested to him by the Board that he sign the Agreement with a schedule of wages attached thereto, as suggested by the Board, he then took exception to the terms of the Agreement itself, with particular reference to the setting up of a grievance committee, and stated that in any case he would not sign any Agreement as he was definitely opposed to putting his signature to any document that had reference to the union activities. It was then found necessary to give a further adjournment to July 11 to enable him to re-consider, and, if necessary, to take the matter up with his Directors, and also allow Mr. White an opportunity to discuss with the employees the new wage schedule proposed by the Board.

On resuming the hearings on July 11, both parties were again asked to make any further comments they wished to make with regard to the proposals formerly submitted to them by the Board, and if after re-consideration of the same they were prepared to accept them.

Mr. White showed his readiness to co-operate with the Board to any reasonable degree, but Mr. Maillard, to the disappointment of the Board, was still adamant in his refusal to sign any agreement, or to even discuss any proposal that might justify him in doing so. When asked if he would write a letter setting forth such terms as he was agreeable to, and agreeing to carry out those terms, he refused even to go that far.

It has become quite apparent to the Board throughout the hearings that Mr. Maillard resents any dictation on the part of the Union and his employees, and displayed very little of that co-operative spirit and good faith which should exist between Management and Labour, which he displayed most in refusing to even consider the setting up of a grievance committee or a Labour-Management Committee, both of which the Board considers essential to the successful operation of the plan. Mr. Maillard appears to be willing to rely on the good will which he thinks already exists between him and his employees, many of whom have been with him for some time. As to whether or not he is justified in doing so remains to be seen.

Mr. Maillard being so determined in his stand, and not being prepared to alter his decision to any degree whatever, the Board had no other alternative but to dispense with further hearings, which they did with regret, and to report to you the results of its conferences and make such recommendations as it sees fit.

R. H. Hooper, in his report to you, enclosed a copy of a tentative agreement which he indicated as being satisfactory to both parties, and that the only matter still in dispute was that of wages. He is borne out in that by the written submission of the Solicitor for the Company in which he says, "The chief dispute between the parties hereto would appear to be that of wages. There is, of course, the question of the closed shop which the Union insists upon but which the Company will not agree to under any circumstances or on any conditions whatsoever."

As to the latter part of above quotation, there was no insistence on the part of the Union that there be a closed shop, therefore leaving only in dispute the matter of wages. The opinion of the Board so far expressed is borne out by the written submissions of the parties concerned, and which are attached to this report.

The Board, in its recommendations, does not therefore consider it necessary to submit any

new Agreement, other than that already forwarded to you by Mr. Hooper, other than to suggest the following addition and changes:—

That Clause 7 thereof be amended by adding to the end thereof the following, "Such Grievance Committee shall consist of members of the Union who have been employed by the Company continuously for a period of at least one year."

That paragraph 8, Sub-Sec. (a) be amended by adding the word "Dominion" before the word "Minister" in the second last line thereof.

That in view of the financial position of the Company, and the consequent great need for efficiency in the operation of the plant, that the formation of a Labour-Management Committee would be in the interests of all concerned, and it is therefore recommended that the following paragraph be added to the Agreement as paragraph 17:—

"17. It is agreed by the parties that within a reasonable time following the inception of this Agreement a Labour-Management Production Committee will be instituted on a basis mutually agreed upon by the parties hereto."

That the following schedule (A) of classification, wages, etc., referred to in paragraph 15 of the said Agreement be attached to said Agreement.

Schedule A

CLASSIFICATION	Starting Rate	Operators' Rate
<i>Male Help</i>		
Carding		
Fulling		
Spinning57	.60
Wool Washing50	.55
Dyeing62	.67
General Mill Help	.. .50	.55
<i>Female Help</i>		
Automatic 2 machine operators50	.55
Manual 1 machine operator50	.55
Beaming/Warping		
Twisting/Whipping	.40	.45
Spooling/Reeling		
Drying/Baling	.35	.40
Napping/Sorting		
Cutting/Finishing		

The basic week for all employees shall be 44 hours.

All workers will be paid at the rate of time and one-half for all hours worked over and above the regular weekly hours.

All holidays designated as such by the Minimum Wage Act for Manitoba shall be observed as holidays without deduction of pay therefor.

Every employee shall be entitled to one week's vacation with pay for each full year's service after the first year of service, and to two weeks' vacation with pay for each full year's service after five years' service with the Company.

Should any employee desire to work on a piece work basis rather than on the above schedule of wages, he or she may be permitted to do so, on mutual arrangement between the Company and said employee.

Each employee shall be entitled to the operator's rate of pay, shown above not later than six months after the date of his employment.

All of which is respectfully submitted,

Yours very truly,
Board of Conciliation

Supplementary Report

Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Dear Sir:

In the matter of Brandon Woollen Mills Co. Ltd., Brandon, Man., and Local No. 1, Brandon Woollen Mills Union (C.C.L.), this board has completed its work, but failed to arrange a settlement.

I am in complete accord with the Board's report, but beg to submit, in addition, the following:

The very definite opposition to the Union on the part of the Company was evident to me from the first session and, as I pointed out to my fellow Board members, would be the factor which would interfere with any attempt to bring about a settlement, as well as being a direct effort on the employer's part to deny his employees their rights under Section No. 4, Sub. Sec. (1) P.C. 1003, while taking full advantage by his own admission, of Sec. No. 4, Sub. Sec. (2) P.C. 1003.

During the hearings the employees representative, Mr. W. T. White, made allegations to the effect that since the formation of this

Board, wage increases had been granted to some employees.

To my mind this is a further effort to discredit the employees union and a direct violation of Sec. No. 21, Sub. Sec. No. 4 in so far as it is a change of condition relating to

hours of work, and I recommend that action be taken under Sec. No. 42.

Respectfully submitted for your consideration.

Yours truly,
(Sgd.) R. B. CONSTABLE,

Report of Board in Dispute Between Canadian Industries Ltd., Nobel, Ont., and Local 13031, Canadian Chemical Division, District 50, United Mine Workers of America (AFL-CCL).

On July 15, 1947, the Minister of Labour received the Report of the Conciliation Board, the personnel of which was as follows: Honourable Mr. Justice W. D. Roach, Chairman, and L. A. Landriau, K.C., and Herbert Orliffe, members appointed on the nomination of the employer and employees respectively. All three reside in Toronto. Mr. Landriau was appointed a member of the Board on May 12, 1947, following the death of Gerald H. Brown, Ottawa, who had been appointed to the Board originally on the nomination of the employer.

Report of Board

To:

The Honourable the Minister of Labour,
Ottawa, Ontario.

The Board of Conciliation established by you herein submitted its unanimous interim report under date the 20th day of May, 1947, setting out the terms of an interim settlement upon which the parties had agreed with respect to the only matters that were still in issue between them, viz., wages and union security, and pointing out that at the request of the parties this whole matter was left otherwise in abeyance until the 3rd day of July of this year.

On the 3rd of July last your Board again met with the parties at the City of Toronto, and we hereby submit our further and final report as follows:—

RE WAGES

The wage rates under the former agreement varied, according to classifications of employees, from 74 cents to \$1.04 per hour. As was pointed out in your Board's interim report, under the terms of the settlement brought about at the earlier meetings of your Board with the parties, these rates were increased by 3 cents per hour, retroactive to January 15 last, being the date of expiry of the former agreement. The Union had demanded an increase of 10 cents per hour. During the recess since your Board's interim report, the Company had made some investigation of wages paid in industries that were,

at least in some respects, comparable to the Company's business, and in the same district. As a result the Company increased its offer by 5 cents per hour, that is, a total increase of 8 cents per hour; that additional increase of 5 cents to be retroactive to May 24 last. The Union refused to accept that offer and still insisted on its original demand. We regret that your Board was unable to bring about a settlement on this issue.

RECOMMENDATIONS

The Union's demand had been put upon three footings—

- (a) Wage rates paid in allegedly comparable industries at various places in the Province of Ontario.
- (b) The increase in the cost of living.
- (c) The ability of the Company to pay.

Dealing with these reasons in inverse order:

The Company does not set up any inability to pay.

The increase in the cost of living and wage rates paid in allegedly comparable industries may very well be considered together.

It is undisputed that the wage rates formerly in effect at this plant had been mutually agreed upon between the parties after careful and exhaustive consideration. The history of industrial relations at this plant is excellent and it was manifest to your Board that at no time in the past several years has there been any deliberate overreaching by the union in the matter of wages or any effort on the part of the company to unduly depress them. Having regard to these respective attitudes we think it fair to assume that as of the dates when those various wage rates were put into effect they were fair and reasonable and adequate and were so considered by both parties. This is not a submerged or isolated industry or one in which the industrial relations including wages were outside the general pattern. The union through its district and International officers who were familiar with wage scales generally were in a position to advise and it must be assumed did advise the employees

on the subject of wage rates. It was in that setting that wage rates and classifications were formerly settled between the parties.

Starting with that premise it became pertinent to inquire to what extent the undisputed increase in the cost of living justified or made necessary an increase in those rates. Wage rates must of necessity bear a relation to the cost of living but in our opinion it is not desirable or sound that the former should be entirely governed by the latter. The cost of labour forms a large part of the cost of production, and it is inevitable that as the former increases so does the latter. Production costs affect the ultimate consumer, whether he is buying eggs or explosives. If each time wages are increased there is to be an increase in the cost to the consumer it follows that wages can never keep pace with the cost of living. We do not pretend to be expert economists, but it seems to us that it is in the interest of both industry and labour that they direct their joint efforts to bring about stabilization. We believe that in this instance both the company and the union are keenly aware of the necessity for such joint effort.

During our discussions with the parties we had submitted to us recent adjustments in wage rates in various other industries located elsewhere in this province. The percentage of increase in some instances was slightly greater than the increase offered by this company, but we think any such slight difference would be offset by the higher cost of living in those other places. Having regard to all the foregoing, we recommend that there should be an increase of 8 cents per hour, as offered by the Company, but that the same should be retroactive to January 15, 1947. This retroactive

feature would implement a previous written undertaking by the Company to the Union.

UNION SECURITY

Under the last collective agreement between these parties the Company provided special facilities to enable the stewards to collect union dues on pay days. That method has not proved entirely satisfactory. There are always some laggards who fall behind no matter what facilities are provided to collect from them. The company argued that it was the business of the Union and not of the company to deal with those individuals. There is some merit in that argument but in view of the history of good relations between this company and its employees in this plant the majority of this Board, as hereinafter indicated, think that the company might profitably lend assistance to the union in the collection of union dues. It would indicate a spirit of further good will and make for an increase of confidence in the minds of the employees.

The union demanded a union shop. We recommend against it.

The undersigned Chairman and Mr. Orliffe recommend, however, that the company grant and the union accept voluntary check off revocable on sixty days' notice. The undersigned Mr. Landriau does not agree with this recommendation and recommends instead a continuance of the system in operation under the former agreement.

*All of which is respectfully submitted.

Dated this 11th day of July, 1947.

(Sgd.) W. D. ROACH,
Chairman.

(Sgd.) HERBERT ORLIFFE.
(Sgd.) L. A. LANDRIAU.

Report of Conciliation Board in Dispute Between City Dray Co., Winnipeg, Man., and Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL).

On July 1, 1947, the Minister of Labour received the Report of the Conciliation Board, the personnel of which was as follows: J. E. L. Graham, Chairman, appointed by the Minister on the recommendation of the other two members of the Board, M. Feely and A. M. Israels, appointed on the nomination of the employer and employees respectively. All three reside in Winnipeg.

Report of Board

The Hon. the MINISTER OF LABOUR,
Ottawa, Canada.

Sir: The Board of Conciliation which was appointed by you to inquire into the above-

mentioned matter has the honour to report and recommend as follows:—

The first session of your Board was held at the offices of the Labour Department, Winnipeg, on Tuesday, May 13, 1947. Subsequent sessions were held May 20, 29, June 4, 6, and 20.

The employees were represented by: Mr. H. A. Chappell, General Representative of the Canadian Brotherhood of Railway Employees and Other Transport Workers; Mr. G. S. Jones, Special Representative; Mr. G. Reeves, Local Chairman. The City Dray Company was represented by: Mr. A. S. Boulton, President; Mr. B. C. Parker, Solicitor.

From 1938, collective agreements covering rules, working conditions, and rates of pay have existed between the City Dray Company and a committee of its employees, members of the Canadian Brotherhood of Railway Employees and Other Transport Workers—Division 205. The employees governed by these agreements are classified as Chauffeurs, a classification which according to the last agreement of June 1, 1946, includes any employee "who is in charge of, and operates a motor vehicle such as a truck, semi-trailer, tractor for hauling trailers, etc." At present there are 54 such employees on the payroll of the Company and affected by this dispute.

On October 15, 1946, the Brotherhood initiated negotiations with the Company for the provision of a wage increase of 21 cents an hour. The dispute before your Board arose from the failure of these and later negotiations assisted by an Industrial Relations Officer to provide for wage rates mutually satisfactory to both parties. The sole issue confronting your Board was the question of the basic rates of pay for the employees concerned.

The present wage scale, established in 1944, and as set forth in Article 8 of the last agreement between the Company and the Brotherhood is as follows:—

First six months cumulative service	54c per hour
After six months cumulative service	59c per hour

It is however provided and agreed that no Chauffeur who completes all the hours of labour within any week which the Company requires of him shall be paid for such week less than the amount which he was previously entitled to on a weekly rated basis, namely:—

	Cartage	Contract
First year	\$23.20	\$23.20
Second year	24.20	24.20
Third and subsequent years	25.70	24.20

As its primary objective, your Board sought an immediate resumption of negotiations between the Company and the Brotherhood. Accordingly, with the exception of a final session with the President of the Company, joint sessions were convened with the representatives of both parties.

At the first session of your Board, the Brotherhood requested (1) an increase of 21 cents an hour in the current wage rate of the employees, (2) such increase to be made retroactive to January 1, 1947. The contention of the Brotherhood as summarized in its brief submitted at this session was, in part, as follows:—

No attempt is made in this submission to give detailed comparative rates, within or without the industry—although the scope to

do this is practically unlimited—as we feel that any such comparisons are at the moment, irrelevant. The question before the Board is the inadequacy of the rates presently being paid to the employees subject to this inquiry, to meet the current, and ever-increasing, costs of living, let alone provide a reasonable and decent standard of living for these workers. In this connection, we submit that the hourly rate that would be created by granting the increase of 21c per hour, as asked herein, would be the minimum necessary to do this.

In support of its contention, the Brotherhood cited a calculation of the weekly income required for a "minimum standard of living" based on figures of the Dominion Bureau of Statistics for the year 1946. This calculation indicated weekly earnings of \$37.17 as a necessary minimum. The Brotherhood declared that with the requested increase of 21 cents an hour, the employees would "no more than meet" the "minimum standard of living" figure calculated for 1946, a figure which would have to be substantially adjusted to conform with the subsequent increase in the cost of living.

It was further suggested that considerable as the increase in the cost of living is, as measured by the official cost of living index, the full impact of higher living costs upon the low income worker is even greater than the index represents, and, indeed, constitutes for the employees concerned "an almost impossible economic crisis". This followed from the fact that for the major items in the budget of the low income worker, the price increases have been considerably greater than their weighting in the official cost of living index would reveal. The price changes affecting the staple foods, the major single item of the low income budget would, it was argued, represent a more realistic indication of the seriousness of the increased living costs for the low income worker. Reference to the "Dominion Average Price Relations" in the *LABOUR GAZETTE*, April, 1947, would show alarming increases in the average retail prices of the majority of the basic commodities listed. Moreover, the gradual removal of price ceilings and rental controls further accentuated the difficulty with respect to such other items as rent, fuel, and clothing, which were especially significant in the low income budget.

Although it was primarily concerned with the inadequacy of the present wage rates in terms of present living costs, the Brotherhood also referred to the increasingly onerous and exacting services rendered by the employees. It contended that today a truck driver in the employ of the Company must be an efficient and responsible operator in increasingly difficult traffic conditions; and, further, that as delivery of freight is now less frequently

accepted at the truck side, he has the additional duty of carrying freight, usually without assistance, into the premises of consignees. The Brotherhood declared, however, that the request for an increased wage rate was related entirely to the increased cost of living. The sole contention of the Brotherhood was the increasing disparity between the employees' weekly earnings at present rates and the weekly earnings required to provide the basic necessities of life at present prices.

The attitude of the Company was expressed in the first instance by its President, Mr. A. S. Boulton, and at a later session by its solicitor, Mr. B. C. Parker.

The Company contended that its financial position would not permit an increase in the wage rates at this time. Nor could it have envisaged an increase in the rates even in 1946, its most successful financial year. It pointed out that for that year had the Company paid out in a wage increase its entire net earnings after taxes, this would have allowed only one-third of the increase asked by the Brotherhood; and that had the Company granted the full increase demanded, it would have been faced with a considerable deficit.

Reviewing the operations of the business since its establishment in 1894, the Company stated that since its major source of additions to capital had been its profits, no dividends had been declared until 1940; and it suggested that for subsequent years, with the exception of 1942 when no dividends had been declared, the Company had only been able to pay a relatively modest dividend of five per cent.

With respect to its present and future earning position, the Company declared that from 1924 there had been a consistent downward trend in the net profit earned per truck. This situation had only been temporarily improved with the abnormally high gross earnings of the war years. Already, it was stated, gross earnings showed a marked decline, having fallen by 20 per cent over the first four months of 1947 compared with the same period of the previous year.

In explanation of the unfavourable development in its earning position, the Company referred to the exigencies of its particular business, and the developments in the cartage business in general. It offered two types of service; a general cartage service available on call, and a less profitable "contract" service to particular firms. Its business had been about equally divided between these two services. The Company declared that its own earning position had recently been seriously impaired due to the loss of two of its largest and most remunerative accounts gained during wartime in its general cartage business.

The Company further stated that its competitive position in the general cartage business was becoming increasingly untenable in the face of the very considerable increase in the number of small, independent operators. Of 1,510 dray licences issued by February 1947, 670 had been issued to operators of one truck; by May 1, dray licenses issued had increased to 1,620. The Company felt that this situation tended to disrupt the fair and stable rate structure for its services upon which it depended for the maintenance of its earnings. As a result of this type of competitive encroachment upon its general cartage business, where its most remunerative accounts had already been lost, an increasing proportion of the Company's business was being confined to the less profitable "contract" business. Thus because of these developments in its own business and in the industry as a whole, the Company declared that neither its present nor prospective earnings could absorb any further wage increase.

As far as its present wage rates were concerned, the Company pointed out that drivers' wages represented a continuously increasing proportion of gross earnings, having increased from 32.8 per cent of gross earnings in 1937 to 41.6 per cent in 1946. The increase in the cost of living, it was stated, had been somewhat less than the increase in the earnings of the employees.

Referring to rates and working conditions elsewhere in the industry, the Company suggested that its employees occupied a favourable comparative position. And taking into account the pay for the nine statutory holidays and vacations as provided in the last agreement, it stated that a rate of 63 cents an hour was actually being paid for hours worked.

The Company added that it was seriously considering the inauguration of a profit-sharing plan with its employees. Under the plan the employees would receive 50 per cent of the profits. The Company felt that by this means it might provide an incentive for its drivers to improve the efficiency of its operations sufficiently to meet the increasing competitive pressures in the industry, and at the same time, allow the Company to increase the earnings of its employees. The Company contended that a profit-sharing plan appeared to be the only practical arrangement under present circumstances that could be beneficial both to itself and its employees.

From an examination of the data submitted by the Company and the Brotherhood in support of their respective positions, your Board concluded that there were grounds for a modification of the claims of both parties, and a resumption of negotiations. In the course of the discussions which followed, the

Brotherhood indicated that upon considering the position of the Company as presented to your Board, it might be prepared to make some revision in its request for a 21 cent increase. The Company, on the other hand, while prepared to resume negotiations, stated that it could only amend its original position to the extent of offering its employees a choice of (1) a wage rate of 60 cents an hour and 50 per cent of the Company's net profits, or (2) a rate of 62½ cents an hour, which represented an increase of 3½ cents calculated on the basis of an equal division of the net profits of the Company for 1946. The Brotherhood could not accept these terms as a basis for the resumption of negotiations.

The request that the wage rate for the employees concerned in this dispute be raised to 80 cents an hour was based almost exclusively on the contention that their present rate of 59 cents cannot provide even a "minimum" standard of living. There can be no doubt that the current level of living costs has considerably reduced the real income of the employees. While your Board feels that the rate should be adequate to maintain a "minimum" standard of living, it would, nevertheless, find it difficult to arrive at any precise formulation of the rate required for this purpose. At the same time, your Board is of the conclusion that the present rate of 59 cents an hour does not allow the employees to maintain their real income to the extent to which they are entitled, and that accordingly the rate should be raised.

Further, from the evidence submitted, and in view of the duties and qualifications of the employees concerned, your Board concludes that the present rate does not permit an appropriate differential above prevailing rates for common labour, and is not sufficiently related to prevailing rates for occupations of comparable duties and qualifications.

On the other hand, the impossibility of granting an increase in the rate of 21 cents as requested by the Brotherhood was argued almost entirely in terms of the financial inability of the Company to grant any increase whatever, let alone one as substantial as this. After an examination of certain of the financial statements of the Company together with cost and other operating data concerning its business prior to, during, and since the war,

your Board agrees that an increase of 21 cents would be considerably in excess of the present financial ability of the Company. This is evident particularly in view of the present trend in the gross earnings of the Company.

At the same time, the earning capacity of the Company seems to have permitted it to support a wholly owned subsidiary, Boulton Motors Ltd., to the extent of an investment of \$45,000. And through its internal financial policy, over recent years the Company appears to have developed with some success a favourable capital and surplus position. It should also be added that during the proceedings of your Board, the Company was in process of a reorganization making it and its subsidiary separate entities of a new holding company, and reducing its capital from \$76,000 to \$30,000. From the evidence before it, your Board has reason to believe that the Company has been unduly pessimistic with respect to its recent and its probable earning capacity, and its financial ability to increase the earning of its employees.

After careful consideration of the contentions of both parties and the evidence submitted, your Board finds and recommends as follows:

- (1) Under present circumstances, a rate of 70 cents an hour would be more appropriate for the classification of employees involved in this dispute.
- (2) Recognizing the particular position of the City Dray Company, your Board unanimously recommends that its wage scale be revised to provide a rate of 64 cents an hour for the first six months' cumulative service, and a rate of 67 cents an hour after six months' cumulative service.
- (3) The increase in the rates should be retroactive to June 1, 1947, the expiry date of the last agreement.

Winnipeg, 28th June, 1947.

Report of Conciliation Board in Dispute Between S. Cunard & Co. Ltd., Halifax, N.S., and Local 2, National Union of Coal Distributors (CCL).

On July 2, 1947, the Minister of Labour received the Report of the Conciliation Board, the personnel of which was as follows: His Honour Judge K. L. Crowell, Bridgetown, N.S., Chairman, appointed by the Minister

on the joint recommendation of the other two members of the Board, Col. W. N. Wickwire, K.C. and H. A. Shea, both of Halifax, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Dear Mr. Minister:

Your Board is of opinion that it has exhausted every possibility of having a collective bargaining agreement signed by the aforesaid S. Cunard Company, Limited, and your Board submits herewith its findings and recommendations:

1. There is no dispute between the employees (members of Local 2) of the aforesaid company and the company as to working conditions, hours of work, etc.

2. That the members of the bargaining committee representing the employees are prepared to sign the agreement submitted having incorporated therein the written recommendations of the company.

3. Notwithstanding the fact that negotiations were being carried on between the said company and the duly certified bargaining representatives under the provisions of P.C. 1003 in an endeavour to effect a collective bargaining agreement, the company illegally negotiated with and entered into a written agreement with a newly organized company association.

4. That the company having entered into the agreement referred to in paragraph three

herein, it now refuses to negotiate further with, or enter into any agreement with Local 2.

5. That in the opinion of your Board, this agreement entered into by and between the said company and the newly formed company association is illegal under the provisions of P.C. 1003 and should not be recognized in this dispute.

6. That your Board being of opinion that the collective bargaining agreement as submitted by the bargaining representatives having incorporated therein the written submissions offered by the company is fair and reasonable, recommends that the company as well as Local 2 be instructed to accept the same as the bargaining agreement between the company and Local 2.

7. Your Board further recommends that new bargaining representatives be elected by Local 2, employees of the company, on which employees of the company shall have membership.

All of which is respectively submitted by all the members of your Board.

(Sgd.) K. L. CROWELL,
Chairman.

(Sgd.) H. A. SHEA,
Member.

(Sgd.) W. N. WICKWIRE,
Member.

Report of Board in Dispute Between Manitoba Cartage and Storage Ltd., Winnipeg, Man., and Canadian Brotherhood of Railway Employees & Other Transport Workers (CCL).

On July 4, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Honourable Mr. Justice J. B. Coyne, Chairman, appointed by the Minister on the joint recommendation of the other two members of the Board, J. W. Morrison and A. Montague Israels, appointed on the nomination of the employer and employees respectively. All three reside in Winnipeg.

Report of Board

To the Hon. HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Dear Sir: The questions before the Board are: (1) Wages; (2) Hours. The employees involved are chauffeurs and warehousemen.

They ask an increase to 80c per hour, instead of the present 59c. The Company offers 65c per hour.

The employees ask a 48 hour week. Now they are liable for 51 hours. The Company

say that 75 per cent of the men at any time do not work more than 48 hours; that the present working hours amount to 6½ hours per day, with 22 miles travel on the average, the balance of the day being waiting time, but only 25 per cent of the men work over 48 hours, the time over that being pretty well distributed among them; and that this demand on the whole amounts to an increase of 1 per cent in wages.

Both men and Company agree that by 1938 wages had increased very considerably over those of the depression period, and that since then, wages have increased in keeping with or somewhat in advance of cost of living in Winnipeg. But the employees say that more recently, and particularly since the removal of price controls, this condition no longer obtains. They also say that irrespective of the relationship of their wages to living costs, their wages are relatively less than others in the community engaged in much the same kind of work, and that their position *relatively* to that of employees in other lines of

business is lower than it used to be. Their claim, therefore, is based in considerable measure upon the relative standard of living.

The Company's answer to the claims is that in view of its past business and present prospects, its past earnings and its prospective earnings, the Company cannot pay more than the amount it has offered; that the Company's business consists almost exclusively of two classes:—

(1) business done for the railways, in respect of which they have an exclusive contract;

(2) other business in respect of which the Company is in competition with numerous cartage companies and individuals in the City of Winnipeg.

In regard to (1), the Company says that the rate which they receive from the railways is too low, and the information that has been placed before this Board indicates that the railways pay higher for this service, not only in a number of the large centres, but also in a number of smaller places, and in some cases twice as much as they pay in Winnipeg. That is not a matter which we have investigated fully, as we have not had the railways before us, and we are not in a position to do more than report what has been stated to us both by the employers and the employees.

The employees have a feeling that perhaps the employers have not pressed strongly enough for increased remuneration from the railways, and it is not unnatural if they should feel this, since the results which the employees would like to see have not been attained.

Our view is, however, that the employers have done their best to obtain higher remuneration and that is obviously in their own interests.

The railways are reported to have gone so far as to say that if wages and other costs increase, the railways will give further consideration to the tolls that they pay to the employer. That, however, is too indefinite a basis upon which this Board could make any recommendation, and too indefinite for the Company to be able to make any larger suggestion of wage than they have made.

In regard to (2), there are no minimum cartage rates by law as there are, for instance, in Toronto. There is keen competition here, a good many trucks being owned and operated by individuals, sometimes with the assistance of members of their family, and there is no union covering the employees of any but the large cartage companies.

The Company does a warehousing business. It represents that it has made a loss in the last two years on the cartage business and

that the profit on the warehousing in one year has been merely sufficient to enable them to break even.

The Company has paid in various years, a dividend up to but not exceeding in any year, three per cent. The employees have had the advantage of some perusal of the financial statements before this Board was formed.

We have not gone into the question of the propriety of the depreciation allowance, but from general knowledge, we conclude that the depreciation allowance, if we were to express an opinion, is too low rather than too high.

The employer has intimated that if they were able to do so, and had any assurance of continued flow of business in present or greater volume, they would be glad to pay a larger wage.

It has been suggested that in regard to (2) above, this Board should recommend that the proper authorities acquire the power and fix minimum cartage tolls. This, however, is too wide a question, and has too many aspects for this Board to express an opinion upon the matter. It involves questions of public policy and economics beyond our scope or time or capacity.

In regard to (2), we have no solution to offer.

The Board must, however, express extreme regret that both employer and employees are in the clutch of circumstances over which they have not been able to exercise any control. The Board must also observe that other Boards have sat and made recommendations in the past in respect of substantially this same problem between the same parties, but owing to intervening circumstances the recommendations of the last Board could not be implemented and the solutions suggested were not acted upon. Without concurring in all there recommended, this Board does feel that this state of stalemate should not be allowed to continue; that the railways should be pressed to make larger allowance for their services, it being noted that the railways themselves pay their own employees for quite similar services at a much higher rate than the employer involved in the work of this Board is able to pay; that the question of minimum cartage tolls should be given immediate consideration by the proper authorities. The Board, under present circumstances, cannot recommend anything more than the employer has offered, and it comes to this conclusion with regret.

The Board would like to note the admirable presentation on both sides, which while vigorous was courteous, and also to note and commend the amicable relations that exist between employers and employees.

All of which is respectfully submitted.

Minority Report

To: The Honourable The Minister of Labour.
Sir:

It is with regret that I must advise you of my inability to concur in the report submitted by the majority of this Board.

The procedure towards conciliation was brought about by the failure of the parties to reach agreement on the matters of wages and hours of employment.

It appears that the relationship between the parties have been cordial and harmonious and although the employees have for some time considered their wage position inequitable and trying they have exercised consideration and restraint.

The employees rested their presentation before this Board on the basis of minimum need and their depressed rate of pay compared with identical employment in other cities in Canada and comparable employment in Winnipeg.

The Brief of the Brotherhood showed that the first collective Agreement negotiated with the Employer in 1938 provided for a rate of 45 cents per hour for chauffeurs and \$21.20 per week of six days for warehousemen which rates were based on a week of 48 hours. Following the Order-in-Council P.C. 7440 the cost-of-living bonus was added and when subsequently included in the wages brought the rate up to 55 cents per hour for all employees. In June, 1944, this rate was increased by 4 cents per hour, bringing the rate up to the current one of 59 cents per hour.

The Brief details the sharp rise in the cost of living which according to the Index of the Dominion Bureau of Statistics stood at 133.1 on May 1, 1947. That the tendency was towards further rise was instanced by the rise of 2.5 in the month ended May 1 and the further removal of price controls.

The Employer has shown that its hourly rates in percentage have exceeded the percentages of increase in the cost of living as reflected in the Index of the Dominion Bureau of Statistics but this has given little satisfaction to the workers who received an annual wage of \$1,069 in 1941 when the Minister of Labour said that a worker earning \$25 per

week had to spend practically his entire earnings on the necessities of life (LABOUR GAZETTE 1941—p. 405).

The increase to 65 cents per hour offered by the Employer would give each employee an average annual wage of \$1,647 while the estimated average expenditure for maintaining an average working class family of two adults and three children, according to the Home Economist of the Family Bureau for the City of Winnipeg is \$168.10 per month or \$2,017.20 per year.

I believe that the Brotherhood has established that the rate of 65 cents per hour offered by the Employer is not sufficient to provide the Employees with the recognized minimum standard of living.

It has also been established that these Employees, despite their acknowledged skill and responsibility receive a lower rate of pay than the lowest skilled railway employee (sweepers receive 68 cents per hour) and from 17 to 28 cents less per hour than the men doing comparable work for the Railway Express and Freight Services.

The rejoinder of the Employer to the above companies was that they couldn't be considered analagous as they were not taken from industries in a similar competitive frame. It was also shown that the four large warehouse and cartage businesses in Winnipeg paid, with very slight variation, an hourly rate of 59 cents.

The Employer does not oppose the Employees' request for a wage increase on the ground of its inability to pay but states that its wage rate is consistent with its policy of providing continuous annual employment. It also suggests that it is apprehensive of fixing wages on its present operating revenues since they are at an all-time high and a decline of 10 per cent in volume could not economically sustain a wage rate of 65 cents per hour. No financial statement was exhibited to demonstrate this suggestion.

The Employer takes the position that any greater increase in wages can only be granted with increased profits and this is prevented:

1. Because 45 per cent of its cartage business is done with the Canadian Pacific Railways under exceedingly low contract rates.
2. Because it risks losing its general business to unequal competition should it be free to raise its rates.

However understandable these problems may be, they are peculiarly the problems of the Employer and though of long duration the Employer has not demonstrated any strenuous effort toward their solution before this Board. The Employer could justifiably press for an upward revision of its contract rates with the Railway which appear to be about

the lowest for any comparable city in the Dominion on the ground that these rates depress the wages of workers beneath the minimum recognized as a living standard.

The Employer has also failed to take any initiative in following the recommendation of the last Board, that sat to conciliate a similar dispute in 1941, to seek municipal or provincial intervention to stabilize the cartage industry with respect to the needs of the City and rates which would make possible economic operation for the Employer with fair wages and security of employment to the employee.

For the above reasons I am impelled to urge that some attempt be made to re-establish

the real wages of the Employees and recommend:

1. That the rates currently paid to the employees be raised eleven cents per hour.
2. Payment of an overtime rate of time and one-half for all work performed in excess of 8½ hours Monday to Friday inclusive and 5½ hours on Saturdays.
3. The above increases to be retroactive to January 1, 1947.

The whole of which is respectfully submitted.

Winnipeg, July 4, 1947.

(Sgd.) A. M. ISRAELS

Report of Board in Dispute Between National Cartage and Storage Ltd., Winnipeg, Man., and Canadian Brotherhood of Railway Employees and Other Transport Workers (CCL).

On July 4, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Honourable Mr. Justice J. B. Coyne, Chairman, appointed by the Minister on the joint recommendation of the other two members of the Board, J. W. Morrison and A. Montague Israels, appointed on the nomination of the employer and employees respectively. All three reside in Winnipeg.

Report of Board

Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Dear Sir:

The questions before the Board are:— (1) Wages; (2) Hours. The employees involved are chauffeurs and warehousemen.

They ask an increase to 80 cents per hour, instead of the present 59 cents. The Company offers 65 cents per hour.

The employees ask a 48-hour week. Now they are ~~able~~ for 51 hours. The Company say that 75 per cent of the men at any time do not work more than 48 hours; that the present working hours amount to 6½ hours per day, with 22 miles travel on the average, the balance of the day being waiting time, but only 25 per cent of the men work over 48 hours, the time over that being pretty well distributed among them; and that this demand on the whole amounts to an increase of 1 per cent in wages.

Both men and Company agree that by 1938 wages had increased very considerably over those of the depression period, and that since then, wages have increased in keeping with or somewhat in advance of cost of living in Winnipeg. But the employees say that

more recently, and particularly since the removal of price controls, this condition no longer obtains. They also say that irrespective of the relationship of their wages to living costs, their wages are relatively less than others in the community engaged in much the same kind of work, and that their position *relatively* to that of employees in other lines of business is lower than it used to be. Their claim, therefore, is based in considerable measure upon the relative standard of living.

The Company's answer to the claims is that in view of its past business and present prospects, its past earnings and its prospective earnings, the Company cannot pay more than the amount it has offered; that the Company's business consists almost exclusively of two classes:—

- (1) business done for the railways, in respect of which they have an exclusive contract;
- (2) other business in respect of which the Company is in competition with numerous cartage companies and individuals in the City of Winnipeg.

In regard to (1), the Company says that the rate which they receive from the railways is too low, and the information that has been placed before this Board indicates that the Railways pay higher for this service, not only in a number of the large centres, but also in a number of smaller places, and in some cases twice as much as they pay in Winnipeg. That is not a matter which we have investigated fully, as we have not had the railways before us, and we are not in a position to do more than report what has been stated to us both by the employers and the employees.

The employees have a feeling that perhaps the employers have not pressed strongly

enough for increased remuneration from the railways, and it is not unnatural if they should feel this, since the results which the employees would like to see have not been attained.

Our view is, however, that the employers have done their best to obtain higher remuneration and that is obviously in their own interests.

The railways are reported to have gone so far as to say that if wages and other costs increase, the railways will give further consideration to the tolls that they pay to the employer. That, however, is too indefinite a basis upon which this Board could make any recommendation, and too indefinite for the Company to be able to make any larger suggestion of wage than they have made.

In regard to (2), there are no minimum cartage rates by law as there are, for instance, in Toronto. There is keen competition here, a good many trucks being owned and operated by individuals, sometimes with the assistance of members of their family, and there is no union covering the employees of any but the large cartage companies.

The Company does a warehousing business. It represents that it has made a loss in the last two years on the cartage business and that the profit on the warehousing in one year has been merely sufficient to enable them to break even. We have had some particulars of the financial operations of the Company, and the annual statements of the Company for the last seven years, which verify these statements of the employer.

The Company has paid in various years, a dividend up to but not exceeding in any year, 3 per cent, and in 1945 suffered a considerable loss. The employees have had the advantage of some perusal of the financial statements before this Board was formed.

We have not gone into the question of the propriety of the depreciation allowance, but from general knowledge, we conclude that the depreciation allowance, if we were to express an opinion, is too low rather than too high.

The employer has intimated that if they were able to do so, and had any assurance of continued flow of business in present or greater volume, they would be glad to pay a larger wage.

It has been suggested that in regard to (2) above, this Board should recommend that the proper authorities acquire the power and fix minimum cartage tolls. This, however, is too wide a question, and has too many aspects for this Board to express an opinion upon the matter. It involves questions of public policy and economics beyond our scope or time or capacity.

In regard to (2), we have no solution to offer.

The Board must, however, express extreme regret that both employer and employees are in the clutch of circumstances over which they have not been able to exercise any control. The Board must also observe that other Boards have sat and made recommendations in the past in respect of substantially this same problem between the same parties, but owing to intervening circumstances the recommendations of the last Board could not be implemented and the solutions suggested were not acted upon. Without concurring in all there recommended, this Board does feel that this state of stalemate should not be allowed to continue; that the railways should be pressed to make larger allowance for their services, it being noted that the railways themselves pay their own employees for quite similar services at a much higher rate than the employer involved in the work of this Board is able to pay; that the question of minimum cartage tolls should be given immediate consideration by the proper authorities. The Board, under present circumstances, cannot recommend anything more than the employer has offered, and it comes to this conclusion with regret.

The Board would like to note the admirable presentation of both sides, which while vigorous was courteous, and also to note and commend the amicable relations that exist between employers and employees.

All of which is respectfully submitted,

(Sgd.) J. B. COYNE,
Chairman.

Minority Report

To: The Honourable The Minister of Labour.
Sir:

I. I regret to have found myself in disagreement with the recommendations made by the majority of this Board and am taking the liberty to state the reasons for my non-concurrence in them.

II. The matters in difference between the Employer and Employees which were referred to us for conciliation were wages and hours of employment.

III. The cordial relationship which prevailed between the parties throughout the conciliation proceedings is deserving of mention and commendation despite the failure to reach agreement.

IV. The Employees asked for the following increases in their hourly wage rates:

	From	To
Warehousemen—		
Under 6 months' service.....	59	80
Over 6 months' service.....	62	83
Chauffeurs—		
Under 6 months' service.....	54	75
Over 6 months' service.....	59	80
Helpers—	54	75

The increases were urged on the basis of minimum needs and the depressed existing rates compared with identical employment in other cities in Canada and employment comparable in skill and physical exertion in the City of Winnipeg.

V. The Brief filed on behalf of the Employees showed that the first collective agreement negotiated between the parties in 1938 fixed the pay of chauffeurs at \$100 per month for the first six months of employment and \$107.50 per month thereafter. Helpers were paid 35 and 40 cents per hour. The foregoing rates were paid on a basis of 48 hours per week and overtime was paid on a straight time basis.

In 1939 the rates were revised giving chauffeurs and helpers 45 cents per hour for a fifty-one hour week with time and one-half for overtime.

Under P.C. 7440 commencing 1941, the rates were increased by the addition of the cost of living bonus and in 1944 the following wage rates went into effect:

	Hourly Rate cents	Hours per Week	Overtime cents
Chauffeurs—			
(less than 12 months' service)....	54	51	81
(12 months' service and over)	59	51	88½
Warehousemen—			
(less than 12 months' service)....	59	48	88½
(12 months' service and over).....	62	48	93
Helpers	54	51	81

The latest collective agreement entered into in July, 1946 did not change the above schedule with the exception of chauffeurs who are paid 59 cents per hour and warehousemen 62 cents per hour after six months' service.

VI. The Employees' Brief cites the Index of the Dominion Bureau of Statistics to prove that the cost of living has risen a fraction over 33 per cent from 1939 to May 1, 1947. It also quotes the Dominion Bureau of Statistics statement that it required \$37.17 per week in the summer of 1946 to maintain a minimum standard of living and demonstrated that the cost of living was rapidly mounting weekly with the disappearance of subsidies and controls.

VII. The Employer's Brief in reply shows that the index has only risen 24.8 per cent for the Winnipeg region whereas it increased its wages in the same time 31.1 per cent for chauffeurs, 20 per cent for Helpers and 26.6 for warehousemen. It also shows that the average annual wage per employee in 1939 was \$1,000 whereas it was \$1,500 at the end of 1946.

VIII. Although the percentages are impressive the wages have been consistently depressed. In 1941 these Employees were all earning less than \$25 for a fifty-one hour week at which time the Minister of Labour instructed that a worker earning \$25 per week had to spend practically his entire earnings on the necessities of life (LABOUR GAZETTE 1941—p. 405—Minister of Labour's suggestions on application of P.C. 7440). According to the Home Economist of the Winnipeg Family Bureau it requires \$2,017.20 per year to maintain an average working class family of two adults and three children in living accommodation that rents for \$25 per month.

IX. I hold that the Employees have established that they are not receiving sufficient wages to maintain what is recognized as a minimum standard of living.

X. It has also been established that these Employees, despite their acknowledged skill and responsibility, receive a lower rate of pay than the lowest skilled railway employees (sweepers receive 68 cents per hour) and from 17 to 28 cents per hour less than men performing comparable duties in the Railway express and freight services.

XI. The Employer rejects the above comparisons since they are not made with employees in competitive industries and listed the rates of pay received by employees working for four of the largest cartage businesses in Winnipeg which average 59 cents per hour.

XII. The Employer concedes that the present wages are inadequate but pleads inability to increase them without creating a deficit. It lays the blame for this situation: 1. Upon the low cartage rate it receives from the Canadian National Railways and which covers about 56 per cent of its cartage business; and 2: Upon its inability to meet the unequal competition of non-union operated cartage at higher rates when it will be free to raise them.

XIII. I am not satisfied that the Employer has made the effort with the Railway that this situation has long called for. It is suggested that the Railway would respond to the revision upward of the wage rate but the Employer did not take the initiative and this is obviously what has influenced the Employees to start these proceedings.

XIV. No one has undertaken to justify the large differential in the rates between Toronto, Vancouver and Winnipeg which is directly reflected in the low wages paid here.

XV. With regard to the fear of unfair rate-cutting competition, how does the Employer explain the retention of its contract with the Railway which would manifestly be unattractive to any but the largest operators in the business?

XVI. I do not understand why the people engaged in this industry have taken no step towards obtaining its regulation by a public authority with regard to rates and service to meet the need of the community. Such regulation would stabilize the industry and allow a fair wage and security for the

Employees. This was shown in the level of wages and rates for cartage in cities where there is public regulation of this business.

I therefore respectfully recommend:

1. That the rates currently being paid to the employees be raised eleven cents per hour.
2. That payment of the overtime rate of time and one-half commence after 8½ hours in each day Monday to Friday and after 5½ hours on Saturday.
3. That the above increases be retroactive to the expiry date of the last Agreement.

The whole of which is respectfully submitted.

Winnipeg, July 4, 1947.

(Sgd.) A. MONTAGUE ISRAELS.

Report of Board in Dispute Between Thermoid Mould & Tool Works Ltd., Welland, Ont., and Local 523, United Electrical, Radio and Machine Workers of America (CIO-CCL).

On July 11, 1947, the Minister received the final Report of the Conciliation Board, the personnel of which was as follows: Dr. Alexander Brady, Toronto, Chairman, appointed by the Minister on the joint recommendation of the other two members: M. A. Seymour, K.C., St. Catharines, and Dr. H. G. Forster, Welland, appointed on the nomination of the employer and employees respectively.

Report of Board

June 26, 1947.

Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Sir:

The Board appointed by you in this case now begs to submit an additional report to that submitted in April and to be regarded as its final report.

The circumstances of the case were very briefly described in the first report, and those circumstances have not altered. Consequently the Board has no need to add any fresh recommendations to those made in April. In its simplest terms the situation is this: the Company will sign an agreement that is nominally between the Company and the United Electrical, Radio and Machine Workers of America, but is actually between the Company and a "General Committee" consisting of employees selected by secret ballot three days after the signing of the agreement. The Company proposes that this General Committee shall have all the authority usually vested in a grievance committee, safety committee, negotiating committee or any other committee usually provided for in a collec-

tive bargaining agreement. The United Electrical, Radio and Machine Workers, Local 523, will not sign an agreement establishing such a Committee because it does not recognize the Union's proper authority as the certified bargaining agent.

In its former report this Board pointed out that the Company was obligated to deal with the Union through the usual procedure of collective bargaining recognized in the P.C. 1003. It can only now reiterate its view that the Company should properly recognize the Union as long as the Union is the certified bargaining agent of the employees. The terms of the Company's proposals do not properly recognize the Union, and no chance of agreement is possible while the Company is adamant on this matter.

All of which is respectfully submitted.

Dated at Toronto, 26th day of June, 1947.

(Sgd.) ALEXANDER BRADY.

(Sgd.) M. A. SEYMOUR.

(Sgd.) HARVEY FORSTER.

Supplemental Report

I concur in the report of the board. I wish to point out further that refusal to properly recognize the union, is not "negotiating in good faith and making every reasonable effort to conclude a collective agreement", as P.C. 1003 required. I see no reason why the onus for the enforcement of labour legislation should rest upon the union, and recommend that this situation be referred to the proper enforcement officers.

(Sgd.) HARVEY FORSTER.

Interim Report

Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ont.

Sir:

The Board appointed by you in this case now begs to submit a report.

The history of this case is easily described. The Union in question was certified as the bargaining agent for the employees and an agreement was signed on November 10, 1945. That agreement has apparently not been terminated by formal notice of termination. The Union on October 10, 1946 submitted proposed amendments, and negotiations were commenced. The agreement would now appear to be terminated by effluxion of time, unless the parties agree to extend the period of negotiation.

A special difficulty in the negotiations was occasioned by a request to the Company by twenty-five employees (December 6, 1946) that wages, hours of work and other conditions should be negotiated through a shop committee rather than through the Union. The Company drafted a proposed agreement which was intended to meet in some degree the wishes of the employees, but the Union declined to negotiate on the basis of a draft that did not properly recognize its position as the certified bargaining agent, and at that point negotiations ended.

The Board met the parties in Welland on March 1 and heard the recital of circumstances mentioned above as presented by Mr.

L. R. Leaver and Mr. R. B. Law, K.C. representing the Company and by Mr. C. R. Sullivan and Mr. C. L. Dubin representing the Union.

The Board recognizes the difficult position in which the Company was placed by the petition of the employees submitted on December 6. But it would like to emphasize that the Union is the certified bargaining agent of the employees and that with it the Company should deal through the usual procedures of collective bargaining between a Union and a Company. Since this process of bargaining was interrupted by the incident of December 6, the Board would recommend that the Company and Union should recommence negotiations in order to renew their former agreement or reach a fresh agreement. If the parties cannot, after negotiations, reach an agreement, the Board will be ready to meet them and to assist them in their negotiations. Its present report may, therefore, be regarded in the nature of an interim report on the case. But it expresses the hope that the parties may, through their own efforts, succeed in reaching an agreement.

All of which is respectfully submitted.

Dated at Toronto this 14th day of April, 1947.

(Sgd.) ALEXANDER BRADY,
Chairman.

(Sgd.) M. A. SEYMOUR,
Member.

(Sgd.) HARVEY G. FORSTER,
Member.

Appointment of Industrial Disputes Inquiry Commissions under Wartime Labour Relations Regulations, P.C. 1003

**Canada Steamship Lines, Ltd., Colonial Steamship Co. Ltd. and
Sarnia Steamship Co., Ltd.**

A THREATENED strike by members of the Canadian Seamen's Union led to the appointment by the Minister of Labour on July 18, 1947, of Mr. Leonard W. Brockington, K.C., C.M.G., of Ottawa, as an Industrial Disputes Inquiry Commission to investigate differences between the Union and Canada Steamship Lines, Limited, of Montreal, P.Q., and the Colonial and Sarnia Steamship Companies, Limited, of Port Colborne, Ont.

The dispute arose out of the alleged non-fulfilment of the terms of a collective agreement entered into between the parties on September 3, 1946. There were three main

issues involving preferential hiring of members of the Canadian Seamen's Union, grievance and arbitration procedure, and the issue of passes to duly appointed shore delegates.

The Commissioner held numerous joint and separate conferences with representatives of the Companies and of the Union, and with the legal advisers of the parties, in Toronto, Montreal, Ottawa and Port Colborne. His report to the Minister of Labour was submitted on August 11, but at the time the LABOUR GAZETTE went to press had not been made public.

Conciliation Work of the Industrial Relations Branch during July, 1947, under the Conciliation and Labour Act

OFFICERS of the Industrial Relations Branch dealt with 10 industrial disputes during the month of July, involving 130 workpeople employed in 11 separate establishments. Of these, 5 were new disputes which originated during the month and 5 were situations which had been untermi- nated as of June 30, and received further attention in July. These disputes were dealt with under the provisions of the Conciliation and Labour Act. They were thus distinct from and in addition to the conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton, N.B. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and North-western Ontario; three officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

Food Products Workers, London, Ontario.—

In the latter part of June, 1946, the Minister of Labour received a joint request from representatives of the Kellogg Company of Canada, Limited, London, Ont., and the International Chemical Workers' Union, Local No. 171, for the appointment of the chairman of an Arbitration Committee to decide whether an employee of the company had been properly or improperly discharged.

The Minister appointed His Honour Judge Ian MacRae, of Strathroy, Ont., as chairman of the Board of Arbitration, the other members being Messrs. R. R. Evans, K.C., and Mr. B. D. Creighton, representing the company and Messrs. Wm. Edmiston and Frank Quaife, representing the union.

In the evidence submitted on behalf of the dismissed employee, it was brought out that he was elected president of the local union in October, 1946. He was apparently elected at an informal meeting, and the company later insisted upon another election in compliance of the provisions of the collective agreement, when he was again elected. It was submitted on behalf of the union that the company, having formerly accepted officials without a formal election, their requirement of one in this instance constituted a discrimination against the man in question. Evidence showed that the plant manager had commenced his duties with the Canadian plant in November, 1946, having returned from the Services, and he required that the collective agreement be complied with. The majority report of the Board found that the insistence upon a second

election did not establish discrimination upon the part of the company against the individual.

It was submitted by counsel for the employer that the union must establish that the action taken was in the nature of a discrimination against the employee due to his membership in the union, or in other words, that if discrimination in this regard was not established, the company had the sole responsibility of discipline, and that discipline included the right to discharge. It was submitted for the union that "to discipline" did not include discharge. The majority of the Board held that under a proper interpretation of the collective agreement, discipline would include a permanent discharge, but that in view of the Board's finding on the facts, it was unnecessary to rest the decision upon this ruling.

The ground for dismissal submitted by the company was "continued violation of the terms of the union agreement" in that the man in question "repeatedly took time off from his work without permission to hold prolonged discussions with other employees who were engaged in their own work". Many witnesses testified as to various instances occurring from the fall of 1946 to May 16, 1947. The Board found that, considering the verbal and written warnings which were given the man over a period of several months, and the occurrences which were clearly and definitely established by the evidence, it must be found that the man in question was properly discharged from the employ of the company.

The union's representatives of the Board of Arbitration dissented from the report of the majority.

Leather Products Workers, Oshawa, Ont.—Upon the joint request of representatives of the International Fur and Leather Workers' Union and the Robson Leather Company, Limited, Oshawa, Ont., the Minister of Labour early in July appointed Dr. Alexander Brady, of the Department of Political Economy, University of Toronto, as the chairman of a Board of Arbitration to deal with a dispute between the parties. The other members of the Board were Mr. R. R. Evans, K.C., of Hamilton, and Mr. Drummond Wren, of Toronto, representing the employer and employees respectively. The report of the Board had not been received at the end of the period under review.

Merchant Seamen, Great Lakes.—In the June, 1947, issue of the *LABOUR GAZETTE* (p. 820) it was reported that the Minister of Labour had established a Maritime Adjustment Board for the purpose of arbitrating

differences between the Canadian Seamen's Union and the Sarnia and Colonial Steamship Companies, Limited, Port Colborne, Ont., and in the absence of a nomination from the companies, had appointed Mr. J. Douglas McNish, K.C., of Toronto, to represent management. The union's representative was Mr. Irving Himel, of Toronto. Upon the joint nomination of the representatives of the companies and the union, Dr. Cecil A. Wright, K.C., of Toronto, was selected as chairman.

The report of the Arbitration Board, which is reproduced below, was not accepted by the companies, and as reported elsewhere in this issue of the *LABOUR GAZETTE*, the Minister of Labour subsequently took further steps in an endeavour to adjust differences between the Canadian Seamen's Union and these two companies, together with a third shipping company operating on the Great Lakes and St. Lawrence Waterways.

The Board's report read as follows:—

"Meetings of the Board were held at Osgoode Hall on Thursday, June 19, Monday, June 23 and Thursday, June 26. Mr. Wilkinson appeared for the Company at the first meeting. The Company was unrepresented at the meeting on Monday and the meeting on Thursday, June 25 was held to allow full participation by the Company and at this last meeting Capt. Scott Misener appeared along with counsel. The Union was represented by Mr. McManus throughout the three hearings.

"The situation before the Board is different from the usual arbitration case, inasmuch as the Company did not itself nominate a member of the Board and Mr. McNish was appointed, pursuant to Section 6 of the Memorandum of Agreement between the parties. Whether the Board was properly constituted and whether the Board as constituted had jurisdiction over the three matters which the Union placed before the Board was a question much discussed throughout the meetings. To obviate any possible questions of jurisdiction, the Company was asked finally whether they would consent to the Board dealing with the matters in dispute and when faced with this question, the Company refused so to consent. The Company did not argue for or against the jurisdiction of the Board, the attitude of the Company being expressed by Capt. Misener that there was no dispute between the parties. If one bears in mind this attitude of the Company, it is easier to understand the long drawn out proceedings resulting in the present hearing and easier to deal with the question of jurisdiction.

"There is no doubt in the Board's mind, after hearing the parties, that the Company's attitude that there is no dispute is wrong. There are at the present time two distinct issues arising under the Memorandum of Agreement very much in dispute between the parties as evidenced by what we have heard. It is clear that as early as January 13 of this year, the Union applied to the Company to name an arbitrator for the purpose of proceeding to an arbitration of the dispute. From then on, follows a long series of letters between the Union and the Company, and the Union and the Minister of Labour. It is true that the Company at no time "joined issue" with the Union. This, of course, is consistent with the express view of Capt. Misener that there is still no dispute. It was to meet such a situation that the present Memorandum of Agreement contained the clause empowering the Minister of Labour to appoint a Company nominee on the failure of the Company so to nominate within fifteen days after a request. Granting the existence of a dispute between the parties as to which there is no question; granting proper notice to the Company by the Union of the nature of the dispute which the Union wished to carry to arbitration, as to which there is also no dispute on the evidence; we are of opinion that the Board was properly constituted and that when the Minister of Labour, acting in place of the Company, nominated Mr. McNish to deal with the three matters in issue, the Minister recognized, on behalf of the Company, the existence of a dispute and accordingly referred it to arbitration proceedings.

"The Board raised the question of jurisdiction itself. The Company offered no argument against our jurisdiction and we, therefore, are without benefit of such argument. As pointed out, the Company did not consent to our jurisdiction and the Board has, therefore, had to satisfy itself from the correspondence placed before it by the Union whether the matter is properly one within the competence of the Board. It is true that the grievance procedure as set out in Section 5 of the Agreement was not followed, and we have given consideration to the question whether such procedure was not a condition precedent to arbitration proceedings as contemplated in Section 6. The nature of the disputes before us not involving grievances of individual seamen or employees, we do not believe it was necessary to adopt the procedure of Section 5 as a condition of obtaining an interpretation of the Agreement as it affected the two main contracting parties. Indeed, the Company's attitude that there was no dispute is an indication that such

procedure would have been fruitless and it is a sound principle of law that no man is compelled to perform useless acts. The present Agreement clearly contemplates a final and binding arbitration on matters in dispute concerning interpretation and violation of the Agreement, as indeed does P.C. 1003, even in the absence of an Agreement between the parties to that effect. Taking into account the Union's early demand for the appointment of a Board of Arbitration, and their continuous attempts to obtain such a Board, failing settlement of the dispute, either from the Company or by the intervention of the Minister of Labour, we are of opinion that the matters are properly before us and that we have jurisdiction to hear and determine the issues presented. Were the Board to decide otherwise, it is obvious that the whole purpose of the Agreement could be frustrated by a Company adopting the position that there was no dispute, hence no grievance, and a Union would be without any remedy to obtain a determination of matters, some of which might be vital to the proper functioning of the Agreement. We, therefore, accept jurisdiction and that being so, in accordance with the terms of the Agreement any awards made by this Board "shall be binding upon both parties to this agreement."

"The first matter in dispute concerns Section 8 of the Agreement which reads as follows:—

Union Officers Boarding Vessels

(a) For the purpose of consulting with Union members, the Company agrees that an authorized officer of the Union shall be allowed on board the ship at such places and principal ports as Montreal, Toronto, Welland Canal and Lakehead ports, but he shall not have the right to interfere in any way with the operation of the vessel, and will not confer with crew members except while they are off duty.

(b) The Union shall submit to the Company the name and relevant particulars of the persons authorized by the Union to act as its representatives by this section provided, and the Company, upon receiving from any representative a waiver in form satisfactory to the Company, of any claim for any damage resulting from any accident or injury in or about Company property, shall thereupon issue a pass or passes to such representative enabling him to board the Company's ship at port for the purposes herein provided.

(c) It is agreed that an authorized representative of the Union or the ship's delegate shall have the right to be present at the pay off for the purpose of collecting dues.

"The Union have been unable to obtain a pass for any officer of theirs to board the Company's vessels, although the Union has submitted to the Company the names of the

persons authorized by the Union to act as its representatives and have submitted a form of pass containing a release and discharge of the Company from liability in the following form:—

I, the undersigned, am the person using this pass, and I state that for myself, my heirs and assigns, hereby release and discharge.....their successors and assigns and any ship owned or operated by them, from any and all claims caused by, arising out of or in any way connected with any accident or injury to me or to my property, including any accident or injury attributable to the fault, negligence or want of skill of the said Company, their employees or agents.

In witness whereof I have signed, at thisday of.....1947.

Witness:.....

"This matter has been in dispute for well over half a year and the Company has not approved a form of waiver and hence, as stated above, no Union representative has been permitted to board the Company's vessels.

"The Union asks for an interpretation of Section 8 and claims that the Company has violated the provisions thereof in failing to provide passes and in failing to permit its authorized representatives named to the Company to board the Company ships. The Company took the position before us that the waiver was not "satisfactory to the Company". The Company then argued that as the waiver had to be satisfactory before the men went on, there was no violation of the Agreement. The issue is squarely presented to this Board whether "satisfactory to the Company" is sufficiently broad to enable the Company to refuse Union representatives access to the Company's ships for reasons quite unconnected with the issue of waiver itself.

"That this is the true situation was frankly stated by the Company when it took the position that the real point in issue was that the list of representatives supplied to the Company contained names of persons who were unsatisfactory to the Company. The Company was even frank enough to admit that it was preserving this issue, namely, the unsuitability of Union representatives, by insisting on the technical objection with regard to the unsatisfactory nature of the waiver. Indeed, at the last meeting the Company stated, in answer to questions from the Board, that once the Company was satisfied as to the persons named by the Union to board the vessels, there would be

little or no difficulty in arriving at a proper form of waiver.

"The suitability or unsuitability of Union representatives to the Company is not a matter for the Company to raise under this clause. The Union can, in our opinion, authorize any persons it chooses to act as its representatives under this section. It is no concern of the Company, under the terms of the present agreement, whether those persons hold certain political or religious beliefs, have criminal records or, indeed, have red or black hair. Were it necessary for any Company to approve Union representatives, it is obvious that the effectiveness of Union activity would be largely passed over to the control of the Company. This, of course, is the direct antithesis of collective bargaining. In the absence of some express provision in the Agreement giving the Company the right to do so, it is not open to the Company to approve or disapprove of Union officers. If that be so, it is apparent that the Company, under the guise of non-approval of a waiver form, is attempting to obtain an advantage to which it is not entitled under the Agreement. In so doing, we believe that the Company has exceeded its powers under the Agreement and has acted, in our opinion, on a wrong interpretation of Section 8.

"It appeared that the form of waiver presented by the Union to the Company was prepared during the negotiations leading to the adoption of the memorandum of Agreement and is the form used by the other Companies that adopted the memorandum.

"This Company, however, states that the waiver is not satisfactory to them but do not say for what reason it is not satisfactory, nor has the Company prepared or submitted to the Union any alternative waiver. While it is true the Company's obligation to issue a pass is conditional on obtaining a waiver form "satisfactory to the Company", we are of the opinion that there is an obligation on the Company to exercise a bona fide judgment as to the satisfactory nature of the waiver as a waiver.

"While the evidence we have heard might lead us to the conclusion that the Company was not exercising an honest judgment as to the form of waiver, but was attempting to obtain a list of representatives satisfactory to itself, which is clearly irrelevant to the waiver issue, we are willing for the purpose of determining this dispute, to allow the Company a further period in which to deal with the question of the waiver itself, apart from any issue of the character of the persons named by the Union as its representatives.

"Our award, therefore, in connection with this issue is as follows. The Company may have until 10 a.m. Monday, July 21, to reach an agreement with the Union regarding a form of waiver of liability which will be satisfactory to the Company and the Union. As the Company has indicated that it could very shortly agree on a form of waiver, provided the list of representatives was satisfactory to the Company, once we have ruled that it is no concern of the Company to approve or disapprove the representatives named by the Union, we are of the opinion that the Company can frame a waiver form which may be satisfactory to it within this time. If the parties agree on a form of waiver by 10 a.m., July 21, then any Union representative named to the Company by the Union is entitled to the pass mentioned in Section 8. If the parties fail by July 21 to agree on a form of waiver, then this Board holds that the Union representatives named by the Union to the Company are entitled to the pass mentioned in Section 8 on presenting the signed form of waiver as it now appears in the Union draft reproduced above.

"The second point raised before us concerns an issue of off-days and holidays with pay, arising under Section 10 of the Memorandum of Agreement. At one time there was apparently a question between the parties whether the Company could pay a lump sum of \$25 for the days mentioned in Section 10 to which they were entitled as off-days or holidays, rather than the sum computed at their actual per diem rate of pay. We understand that the Company has now paid the men presently in their employ in accordance with the per diem rate and have thus recognized the principle which may once have been in issue between the parties. It must follow, and the Company agreed, that any men who were not paid at the per diem rate are entitled so to be paid on presenting their claims to the Company.

"The third point in dispute between the parties concerns Section 4 and in particular clause (a) of that section which reads as follows:—

(a) The Company agrees that during the period that this agreement is in effect all unlicensed personnel to be hired shall be requested through the office of the Union and through the medium of the Seamen's Section of the National Employment Service.

"Originally the Union claimed that the Company had violated the provisions of this Agreement but at the final hearing, confronted by the express denial of Capt. Misener,

the Union asked the Board for its interpretation of the Section.

"Clause (a) seems to be clear that there is an obligation on the Company, subject to the exception in clause (c), to ask the Union's office for personnel when a vacancy occurs in the unlicensed personnel of any ship, before hiring any person to fill such vacancy. As a matter of interpretation of the section, we so hold.

"Before us, it was argued that clause (b) vesting the discretion in the hiring of seamen in the master or chief engineer deprived section (a) of any practical or legal validity. This we believe to be wrong. The discretion is always in the master as to who shall be hired. The point is that the Union office must be asked to supply personnel and so long as such personnel are available, we believe it to be the intent of the Agreement, subject to clause (c), that such personnel should be exhausted before the master looks to sources other than the Union office. The discretion to be exercised by the master is, of course, to be a *bona fide* discretion. We have no grievance before us of an improper exercise of discretion.

"That there is a dispute which needs to be resolved, however, seems borne out by the fact that counsel for the Company contended before us that clause (a) of Section 4 was nugatory since it violated Section 152 of the Canada Shipping Act. To avoid any misconception or dispute in the future, we cannot agree with this contention and we are of opinion that section 152 is inapplicable to the situation envisaged in Section 4, clause (a). In our opinion, the Union is not a person who supplies a seaman 'to be entered on board any ship'. In the first place, we do not think that the Union, in the sense of an aggregation of seamen, can be deemed a person within the meaning of that section and in any event, the Union merely puts forward persons who may or may not be accepted by the master in his *bona fide* discretion. This leaves the obligation on the Company under clause (a) unimpaired.

"As indicated, we have no issue before us as to violation by the Company but as the Union originally spoke of this, we need only say that if, as, and when any allegation of violation is put forward by the Union, the Union must be prepared to come forward with evidence of names, dates and times sufficient to establish a claim. We believe, however, that much recrimination can be saved by an understanding of the contractual obligation involved in section 4, which we interpret in the sense set out in this award."

Metal Miners, Bralorne, B.C.—Pursuant to a joint request received late in June, the Minister of Labour on July 8 appointed Mr. R. K. Henderson, of Nanaimo, B.C., as an independent chairman of a Committee of Arbitration to deal with a dispute between Bralorne Mines Limited and the International Union of Mine, Mill and Smelter Workers, Local No. 271, over the dismissal of an employee. The report of the Committee had not been received at the end of the period under review.

Coal Miners, Fernie, B.C.—In compliance with a joint request by representatives of the Western Canada Bituminous Coal Operators' Association and of District No. 18, United Mine Workers of America, the Minister of Labour on July 29, appointed Mr. I. F. Fitch, K.C., of Calgary as independent chairman of a Committee of Arbitration to deal with a dispute between the Union and the Crowsnest Pass Coal Company, Limited, affecting the Michel Mine at Fernie, B.C. No decision had been made at the end of the period under review.

Merchant Seamen, Montreal, P.Q.—In the latter part of June, 1947, the Minister of Labour, upon the joint request of the parties, appointed the Hon. Mr. Justice S. E. Richards, of Winnipeg, as Arbitrator in connection with a dispute between the Canadian National Steamships and the Canadian Seamen's Union with regard to the manning of the ss. *Canadian Observer*. The report of the Arbitrator is reproduced below. In addition to his formal report, the Arbitrator recommended to the parties the formation of a committee of members or officers of the Shipping Federation of Canada representing the employers, and of officers of the Union, to arrange, in cases where there is a dispute not being dealt with by a Port Committee, for the sailing of all vessels without any delay, and to deal with the dispute then or in a reasonable time after the ship has sailed.

The award of the Arbitrator was as follows:—

"The parties entered into the following agreement dated 5th June, 1947, namely:

"In consequence of the Canadian National Steamship agreeing to place one additional fireman on the ss. *Canadian Observer* for one voyage commencing this day, it is agreed that:

"(1) The question of employing one additional oiler, one carpenter and two additional firemen will be immediately referred to arbitration in accordance with Article 2, Section 3, of the Memorandum of Agreement between the East and West Coast

Canadian Ship Owners and the Canadian Seamen's Union, dated October 15, 1946.

"(2) If the Arbitration Board finds that the ss. *Canadian Observer* was fully manned (without the extra fireman engaged as above for this voyage) the Canadian Seamen's Union will refund to the Canadian National Steamship the wages of the said additional fireman for this one voyage.

"(3) If the Arbitration Board finds that the crew of the ss. *Canadian Observer* requires any one of the men mentioned in paragraph 1 above, the Canadian National Steamship will bear the wages of the said extra fireman for this one voyage.

"(4) The employment of the said additional fireman is without prejudice and without precedent to the arbitration proceedings referred to herein."

"The ss. *Canadian Observer* belonging to Canadian National Steamships was converted recently from a coal burner to an oil burner. The dispute arose as to the crew required to fully man the engine department.

"Section 3 of Article 2 referred to in the agreement provides for the appointment of an Arbitration Board to Review consisting of two representatives from the Union and two representatives from the Companies and, if the Arbitration Board cannot agree on a settlement of the dispute, the matter shall be referred to an Arbitrator. The parties agreed that I should be appointed sole arbitrator, and referred the matter to me.

"Meetings were held at the City of Montreal on the 11th, 12th, 14th and 15th July and at the City of Ottawa on the 16th July.

"The evidence which was largely expressions of opinion owing to the nature of the dispute was very contradictory although given in good faith and belief by all witnesses. I have given the evidence and the briefs and arguments of the parties earnest consideration and have formed the opinion that the evidence established.

"That the extra fireman engaged for one voyage was required to man the ship;

"That one donkeyman and two oilers were required in the engine room, each performing the duties of an oiler on one watch, and that, while the donkeyman did extra work in overtime, the amount of such overtime was not great;

"That a carpenter was engaged on some, but not all, ships similar to the *Canadian Observer*, and, when employed, it was usually because of the nature of the cargo carried by the ship; and that if employed on the *Canadian Observer* on its present run and

carrying the cargoes it does on such run, the carpenter would not be fully employed on most voyages and his work could be performed by the boatswain or a seaman;

"That the extra fireman—making a total of five firemen, and one more person—either a carpenter or a seaman, are required to fully man the ship on all voyages.

"Therefore, I award and adjudge as follows:

"(1) That the extra fireman referred to in the arbitration agreement, who was employed for one voyage commencing 5th June, 1947, was required for the manning of the ship for the said voyage;

"(2) That the question of employing one additional oiler, one carpenter and two additional firemen, be decided as follows:

"That one additional fireman—making five altogether, and one carpenter or one seaman—either able seaman or ordinary seaman—should be employed as members of the crew of the ss. *Canadian Observer* in order to fully man the said ship. The decision as to whether a carpenter or a seaman is required to man the ship to best advantage for any voyage should be made by the Master of the ship."

Canadian Railway Board of Adjustment No. 1

THE Canadian Railway Board of Adjustment No. 1, has released its findings in cases heard on May 13 and June 10.

Case No. 554, concerning the Canadian Pacific Railway Company (Western Lines) and the Brotherhood of Railroad Trainmen, in respect to Yardmasters working on Legal Holidays.

The joint statement of fact noted that a difference of opinion existed between the Officers of the Canadian Pacific Railway, Western Lines, and its employees in Yardmasters and Assistant Yardmasters service as to the right of the Company to use time worked on Statutory Holidays as overtime accruals against the encumbency rate.

The employees contended that article 3, clause (h) of the governing agreement relating to legal holidays prohibited the company from using arbitrary payments as overtime.

The company rebutted this contention, holding that where tenure was at a rate exceeding that established under a new agreement, such as was the case in this instance, practice was to stop overtime payment to encumbent where the amount of these payments plus the rate specified in the agreement did not exceed the encumbency rate enjoyed.

This latter interpretation was sustained by the Board and contention of employees denied.

Case No. 555, concerning Canadian National Railways (Atlantic Region) and the Brotherhood of Locomotive Engineers, in regard to the application of Article 24, clause (b) of the Current Schedule for Locomotive Engineers.

The statement of fact stated that a claim was submitted by Engineer Matthews for 20 miles, on account of being held at Truro more than seven hours beyond the advertised departure time of his train, which claim has been denied by the Railway.

Employees contended that Engineer Matthews should be compensated for all time held after the expiration of seven hours after the advertised departure time of his train.

Article 24 Section B of the governing agreement, they held, provided that where Engineers were held away from home terminals waiting for trains for more than seven hours beyond advertised time of departure they were to be paid for such time.

The company's evidence adduced in refutation was that the regular assignment was cancelled and the engineer in question immediately placed in unassigned service which made the section of the agreement cited by the employees inapplicable.

This latter contention was denied and the employees were sustained.

Case No. 556, concerning Canadian Pacific Railway Company (Western Lines) and the Order of Railway Conductors, over the dismissal of Conductor D. Nicholson of Medicine Hat, Alberta, on August 9, 1946.

The joint statement noted that Conductor Nicholson was dismissed from the service of the Company charged with irregularities in the performance of his duties.

The Company contended that the evidence in Nicholson's case was sufficient to justify the action as described in the statement of facts.

The representatives of the employees maintained that the circumstances surrounding the case and the character of the evidence produced did not warrant the action of the company in dismissing Nicholson and did not warrant the company holding him out of the service.

The contention of the employees was not sustained.

Case No. 557, concerning Canadian Pacific Railway Company (Western Lines) and the Order of Railway Conductors, over dismissal of Conductor W. B. Bennett of Medicine Hat, Alberta, on August 9, 1946.

The joint statement noted that Conductor Bennett was dismissed from the service of the Company charged with irregularities in the performance of his duties.

The company contended that the evidence in Bennett's case was sufficient to justify the dismissal.

The representatives of the employees maintained that the circumstances surrounding the case and the character of the evidence produced did not warrant the action of the company in dismissing Bennett and did not warrant the company holding him out of service.

The contention of the employees was not sustained.

Case No. 558, concerning Canadian Pacific Railway Company (Western Lines) and the Order of Railway Conductors, over dismissal of Conductor J. J. Fitzgerald of Calgary, Alberta, on August 9, 1946.

The joint statement noted that Conductor Fitzgerald was dismissed from the service of the company charged with irregularities in the performance of his duties.

The company contended that the evidence in Fitzgerald's case was sufficient to justify dismissal.

The representatives of the employees maintained that the circumstances surrounding the case and the character of the evidence produced did not warrant the action of the company in dismissing Fitzgerald and did not warrant the company holding him out of the service.

The contention of the employees was not sustained.

Wage Rates, Hours and Working Conditions in the Rubber Products and Motor Vehicles Industries

WAGE rates in both the Rubber Products Industry and the Motor Vehicles Industry in 1946 shared in the general upward movement which followed the relaxation of controls under which wages had been relatively stable from 1943, according to information obtained by the Department of Labour in its 1946 survey of "Wage Rates and Hours of Labour in Canada."¹

Employers were asked to report their straight-time wage or salary rates or the average straight-time earnings for workers on piece work for the last pay period preceding October 1 as well as the total number of workers in each establishment, including both plant and office staffs. Information was also obtained on certain other conditions of work² such as hours worked, overtime, vacations with pay,

sick leave, Sunday work, and the number of workers under collective agreement in each establishment.

In the tables on wage rates the averages shown are for selected representative occupations in each industry. They do not include the value of any allowances to employees such as free transportation, group insurance, sick benefits or other welfare plans. The predominant ranges of wages include approximately the middle 80 per cent of the workers in each occupation. The purpose of this is to exclude extremely high and low rates and at the same time to show the ranges between which the great majority of the workers are located. The averages, however, include all the workers in the occupation.

The Rubber Products Industry

The index of wage rates for the Rubber Products Industry covering the years since 1939 indicated a greater advance in wages during 1946 than in any other year in the period. On the base of rates in 1939 as 100, the index was 167.7 as compared with 143.4 in 1945, representing an advance of 17 per cent. Comparative indices for earlier years are 102.2 in 1940; 117.1 in 1941; 127.1 in 1942; 134.4 in 1943 and 139.8 in 1944.

This industry, which is engaged in the manufacture of rubber footwear, tires and tubes and miscellaneous rubber goods, is confined almost entirely to the provinces of Ontario and Quebec. There are a few small establishments in Manitoba, Saskatchewan and British Columbia, but they are not sufficient in number to permit publication of their data. As shown in Table I, the 38 establishments in Ontario and Quebec, which do not include those manufacturing synthetic rubber, employed a total of some 18,800 workers in both plant and office in the 1946 pay period covered. The Census of Industry report of the Dominion Bureau of Statistics, which also includes

information on plants producing synthetic rubber in which a substantial number of workers were employed, reported 49 establishments employing 23,400 workers in these two provinces in 1945; however, a decline was indicated in the 1946 employment index for this industry.

Of the 38 analysed, eight establishments, each employing more than 1,000 workers, account for 60 per cent of the total number of workers, while one-half of the establishments employing 200 wage earners or less in each included only eight per cent of the workers. Twenty-seven per cent of those employed in the industry were female workers. Returns from 12 establishments with a total of 1,900 employees report more female than male workers in each plant.

Half of the establishments, employing 80 per cent of the workers included in the survey, are covered by collective agreements. Thirteen of the Ontario establishments have agreements covering 11,300 of the workers in the industry and six of Quebec's thirteen reporting establishments include 3,900 of their employees under some form of collective agreement.

Table II shows average hourly wage rates for representative occupations in the industry for 1945 and 1946, with the range of rates in 1946. Increases in average rates between 1945 and 1946 ranged usually from 6 to 15 cents per hour.

As indicated in Table III, normal weekly hours in 1946 in this industry varied from 40 to 48 in Ontario and from 48 to 54 in Quebec.

¹ Comparable information on the Pulp and Paper Products Industry and the Brewery Products Industry was published in the July issue of the *LABOUR GAZETTE* (p. 988); and on the Construction and Steam Railways Industries in the June issue (p. 890).

² Information on provincial legislation with respect to workers in industry may be found in an annual summary published by the Legislation Branch of the Department of Labour entitled, "Provincial Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages and Workmen's Compensation."

Twelve establishments in Ontario and one in Quebec, employing a total of 7,600 workers or 41 per cent of the total employment in the industry, reported a 48-hour week. Of the thirteen establishments in Quebec from which returns were received, nine reported 4,600 workers on a standard week of 50 hours. Eighteen per cent of the workers in the industry were on a 44-hour week while only two small plants reported a 40-hour week.

The five-day week, ranging in length from 40 to 50 hours, was reported by thirteen establishments employing 4,700 workers. Nine of these establishments were located in Ontario, with weekly hours ranging from 40 to 48 hours, while the remainder were on a 50-hour week in Quebec. Establishments in which work was reported on six days in the week usually worked from four to five hours on Saturday, but in seven of the twenty-five establishments Saturday was a full day of eight or nine hours.

Returns from seven of the thirty-eight establishments employing a total of about 1,100 workers showed shorter hours for female employees, varying from one-half to eight hours per week. Three of these establishments had a five-day week for female employees only.

No Sunday work in the production process was reported in this industry, but twenty-four establishments reported that small maintenance crews were required.

Time and one-half was the predominant rate for overtime work in this industry. Returns from 18 establishments employing 16,300 workers indicated this rate after daily hours had been worked and 12 with 2,000 workers reported granting it only after weekly hours. This same rate was reported for Sunday work in 21 establishments and for work on statutory holidays by 17 establishments. A number of establishments did not give any information regarding overtime, particularly for work on Sundays and holidays. As indicated previously, however, Sunday work was reported only for small maintenance crews.

Vacations with pay for most industrial workers are provided by statute in Ontario and Quebec. In both provinces an employee

is entitled to one week with pay after one year of continuous service and in Quebec to a half day for each calendar month of employment if he has worked less than one year. A few establishments reported longer vacations with pay than that required under provincial legislation. Two establishments reported one week after six months and one in Ontario granted three days after six months. In 19 of the establishments the vacation does not exceed one week regardless of the length of service, but in the remainder the maximum vacation was two weeks with pay; in 11 of these cases it was granted after five years of service, in one after seven years, in six after 10 years and in the other instance after 25 years.

Sick leave with pay was reported by 18 establishments. Five have group insurance or a sick benefit fund; nine grant sick leave with pay to salaried employees only, although two of these also report a fund for their wage earners. In the remaining three establishments one grants it to regular employees only, another to weekly paid employees and the third stipulates that such benefits are dependent on length of service.

Fifteen establishments reported no shift work. In two-shift operations a total of some 700 employees were reported working the second shift. Of those working three shifts, approximately 1,900 male employees were shown on second shift and 1,700 on the third. The most common wage differential for shift work was three cents per hour more for workers on the second shift than on the day shift and five cents per hour on the third shift. Seven establishments reported this system, with approximately 1,600 male workers on the second and 1,500 on the third shift. Two other establishments reported paying a differential of four and five cents per hour respectively on both shifts. In four establishments workers in certain departments were paid five cents per hour wage differential and in another a four-cent hourly premium was paid for the second shift of a two-shift operation. One establishment reported a 10 per cent wage differential to workers on the second shift.

⁽¹⁾ One establishment permits only three days' initial vacation with pay.

⁽²⁾ Two establishments pay two per cent of annual earnings for service under one year; another grants one week to pieceworkers and two weeks to time workers.

The Motor Vehicles Industry

Wage rates in the Motor Vehicles Industry, which includes the manufacture of automobiles, trucks and buses, were at relatively high levels in 1939 and have shown smaller percentage increases since that year than were recorded in most of the other manufacturing industries. The index for the motor vehicle industry in 1946 was 40.3 per cent higher than in the base year, 1939, and showed an increase of 7.7 per cent over 1945. Preliminary figures for the manufacturing group as a whole for 1946 showed an increase of about 61 per cent in rates since 1939 and 9.9 per cent over 1945. Indices for the years since 1939 based on rates in that year are: 100.6 in 1940; 108.6 in 1941; 115.8 in 1942; 122.7 in 1943; 126.3 in 1944; 130.3 in 1945 and 140.3 in 1946.

Returns from seven Ontario establishments, reporting 20,000 male and 1,300 female employees, were used in the following analysis, although the index numbers are calculated on data from twelve establishments including the smaller firms in other provinces. One of the seven establishments did not come into operation until 1946 and was employing less than 100 workers at the time of the survey. The latest available Census of Industry report of the Dominion Bureau of Statistics, which is for the year 1945, indicated a total Canadian employment in this industry of 18,000 in six plants. However, the employment index for the industry showed a considerable increase in 1946.

Collective agreements were in effect in six of the plants in 1946, applying to approximately 18,000 employees.

The accompanying table summarizes average hourly wage rates in selected occupations in the industry in 1945 and 1946 with ranges of rates for 1946.

Six of the seven establishments worked on the basis of a standard or normal five-day week in 1946. Three of these establishments, employing two-thirds of the total wage earners, worked 40 hours per week. Another reported a standard week of 45 hours and the remaining two reported a 44-hour week, working nine hours on four days and one hour less on the fifth. The establishment which reported a six-day week worked 44 hours, with an eight-hour day during the week and four hours on Saturday.

Sunday work was negligible, in all cases being confined probably to watchmen and a few maintenance workers.

Provision for overtime was generally at the rate of time and one-half, although one establishment reported double time on Sundays and holidays with straight time rates for overtime work Monday to Friday. One establishment paid time and one-half for Saturday work only after normal weekly hours had been worked.

In five establishments, initial vacation with pay was one week after one year of service. In three of these five establishments, the maximum vacation was also one week while in the remaining two the vacation period was two weeks after five years of service. Another establishment closed for one week, during which time employees received two per cent of annual earnings while those in the employ of the company for five years and over received four per cent of their earnings during the same period. The seventh establishment closed for one week during the year and any workers in their employ at least a year received pay for the week.

Some provision for sick leave with pay is in effect in all of the establishments. In three it is confined to salaried staff, while two

plants have in addition a group insurance plan for wage earners to which the company and the employees both contribute. The remaining two reported sickness and accident insurance benefits.

Only one establishment reported shift work on production operations, with three eight-hour shifts for which a wage differential of five cents per hour was paid on both second and third shifts. Two establishments reported

shift work in some departments and paid a wage differential on both second and third shifts of five cents per hour in one case and a five per cent premium in the other. Maintenance and power crews on third shift received either a five cent per hour bonus, a five per cent premium or, as in one establishment, a one-hour bonus; two establishments paid a five cent per hour bonus to second shift workers also.

Tenth Anniversary of Associated Medical Services

From time to time the LABOUR GAZETTE has drawn attention to the activities of Associated Medical Services, Inc., the originators in Ontario of a plan that enables individuals and families to build up funds through voluntary budgeting, to meet the costs of medical and hospital services. (L.G., 1937, pp. 263 and 597 and 1946, p. 121.)

Marking the tenth anniversary of the granting of its provincial charter, the A.M.S. issued an illustrated brochure in June, 1947, entitled "The First Ten Years of Progress," which sketches the origin and subsequent progress of the Association. At the close of 1937, six months after it had received its charter, it had 733 subscribers and while it had met all current expenses, including salaries, out of income, it was in arrears for organizational disbursements. "On its tenth birthday, the A.M.S. had approximately 43,000 subscribers," had paid off its indebtedness and built up "a reserve of \$625,000 to meet contingencies." In addition, during the ten years "it has paid out on behalf of its subscribers, some \$4,400,000 for medical and hospital services."

It is pointed out that "A.M.S. does not provide medical services directly. It pays no salaries to practising physicians or surgeons."

It merely forms a liaison, on a voluntary basis, between members of the general public, individuals or families, and those furnishing professional medical, surgical and hospital services. It "has the voluntary co-operation of more than 98 per cent of the doctors in those areas in which it concentrates," it is stated.

The basic principle on which the A.M.S. operates is defined in the brochure as providing the means for "the individual to prepay the cost of illness by budgeting in advance on a monthly basis and at a rate made possible by distributing expense over a large group of people for a long period of time." By this "application of the insurance principle," the A.M.S. "acts as the depository of the individual's monthly budget payments, thus accumulating the funds out of which medical fees and administrative costs are met."

In the opinion of the Association, voluntary action and freedom of the choice (of doctors) by individual subscribers "are as desirable in the realm of medical care as they are in any other phase of our free democratic system."

The administrative headquarters of A.M.S. are at 615 Yonge Street, Toronto, and it has branch offices in a number of the larger cities of Ontario, including Hamilton, London, Ottawa and Woodstock.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts are summarized in separate articles following this.

Manufacturing: Tobacco and Liquors

MONTREAL, P.Q.—GENERAL CIGAR COMPANY LIMITED AND TOBACCO WORKERS INTERNATIONAL UNION, LOCALS 237 AND 238.

Agreement to be in effect from May 10, 1947 to May 9, 1948, and thereafter from year to year subject to notice. All employees who are or hereafter become union members shall remain members during the life of the agreement. All new employees upon completion of the probationary period shall become and remain union members. Provided, however, that any employee shall have the right to resign his union membership within 10 days prior to the expiration of the agreement.

Hours of work: day workers—9 per day, 5 days a week, a 45-hour week; shift workers—males, 8½ hours 4 days a week and 8 hours one day, a 42-hour week, females, first shift—8½ hours 4 days a week and 8 hours one day, a 42-hour week, second shift—7½ hours 4 days a week and 8 hours one day, a 38-hour week. Watchmen and firemen—a cycle averaging 56 hours per week. Overtime: time and one half for work in excess of 9 hours per day or 45 hours per week for day workers, or in excess of the regular scheduled hours for others and for all work on Saturdays, Sundays (except where part of regular scheduled hours) and 7 specified holidays. Three of these are paid holidays for employees who work the day immediately preceding and the day following if the holiday falls on a normal work-day. Vacation: one half day with pay for each full calendar month of service. Employees paid on an hourly or piece work basis who have completed 7 years' continuous service shall be granted an extra week with pay. Employees on a salary basis shall be granted an extra week with pay after one year's service and an additional 2 days after 10 years, 4 days after 15 years and one week after 20 years' continuous service with the company.

Hourly wage rates effective during life of the agreement: first plant—males (over 18 years of age) increases of 3 cents after 2 months and again after 6 months and 4 cents after one year to a maximum of—group 1 (including blending room helpers, sweeper and cleaner) 65 cents, group 2 (including caser's helper, storage labourer) 67 cents, group 3 (including elevator operator, shipper's helper) 69 cents, group 4 (including binder caser, blender, storage helper) 71 cents, group 5 (including binder caser and wrapper caser's helper, chauffeur—panel delivery) 73 cents, group 6 (including loose cigar stockman, wrapper caser) 75 cents; adjusters—class D 68 cents, class C 79 cents after 18 months, class B 87 cents after 18 months, class A 93 cents after one year to 97 cents after 3 years; machinists 96 cents after 2 years, machine shop helpers 83 cents after 18 months; electrician 98 cents after 18 months; truck chauffeur 84 cents after one year; watchman-fireman 74 cents after 6 months; females and boys (under 18 years) starting rates 41 to 55 cents, increased to 48 to 65 cents after one year. Second plant—increases of 3 cents after 2 months, an additional 3 cents after 6 months and of 4 cents after one year to a maximum of—group A (caser's helper) 67 cents, group B (dryer and packer, leaf counter, shipping and receiving helper, baling stems) 69 cents, group C (elevator operator, drying room attendant and packer) 71 cents, group D (caser shipper and receiver) 73 cents, group E (bulker) 75 cents, group F (fireman) 77 cents, boys (under 18 years) group A 51 cents, group B 53 cents. Piece work rates are also set out in the agreement.

A shift bonus of 5 cents per hour will be paid to all workers on shift hours.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Textiles and Clothing

DUNNVILLE, ONT.—THE MONARCH KNITTING COMPANY LIMITED AND THE TEXTILE WORKERS' UNION OF AMERICA, LOCAL 736.

Agreement to be in effect from March 15, 1947, to March 16, 1948, and thereafter from year to year subject to notice. The company recognizes the union as the sole and exclusive bargaining agent for all eligible employees. If on or after September 1, 1947, a change of more than 6 points in the cost of living index of the Dominion Bureau of Statistics takes place, the wage schedule may be open for negotiations.

The union agrees that there will be no intimidation, interference, restraint or coercion of employees of the company, and that it also will accept all present and future employees of the company into membership. Check-off: The company agrees to deduct union dues monthly from the pay of employees who so authorize and to remit same to the union.

Hours of work: 9 per day or night Monday through Friday, a 45-hour week except dye house (10 per day Monday to Thursday, 5 on Friday) shift engineers (a 50-hour week in summer, variable in winter) and watchman (alternate weeks of 50 and 47 hours). Two ten-minute rest periods in each shift. Overtime: time and one-half for work in excess of 45 hours per week (shift engineers and watchmen in excess of 50 hours) and for all work on Sundays and 8 specified holidays. Vacation: one week with pay equal to 2 per cent of earnings during previous year for employees with 3 months' or more service with the company, employees with less than 3 months' service get a week without pay (unless company decides not to close plant), employees with 5 or more years' service with the company receive an additional week with pay.

Hourly wage rates on time basis, department No. 1 (receiving, shipping, box plant, hand yarns), males 54 and 56 cents, females and youths 44 and 46 cents; department No. 2 (knitting plant) and department No. 3 (dye house, maintenance, trucking), males 54 to 74 cents, females and youths 44 to 48 cents. Piece-work is provided for and "target rates" set which the average experienced operator using proper methods with good application shall be able to earn.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Metal Products

MONTREAL, P.Q.—THE STEEL COMPANY OF CANADA, LIMITED (ST. HENRY WORKS) AND UNITED STEELWORKERS OF AMERICA, LOCAL 3260.

Agreement to be in effect from May 9, 1947, to May 9, 1948, and for a further period of one year unless notice is given by either party. This agreement is similar to the one in effect at Hamilton, Ont., between the Steel Company of Canada, Ltd., and the United Steelworkers of America and summarized below with the following exceptions: Hours of work: daily hours not specified but weekly hours are the same at 48, with no provision for rest periods. The statutory holidays are 6 in number. Vacation is the same except for those with less than one year's service who will receive one-half day for each complete calendar month worked.

LACHINE, P.Q.—THE STEEL COMPANY OF CANADA, LIMITED (DOMINION WORKS) AND UNITED STEELWORKERS OF AMERICA, LOCAL 3258.

Agreement to be in effect from May 28, 1947, to May 27, 1948, and thereafter from year to year subject to notice. This agreement is similar to the one in effect at Montreal (St. Henry Works) between the Steel Company of Canada, Ltd., and United Steelworkers of America as noted above.

GANANOQUE, ONT.—THE STEEL COMPANY OF CANADA, LIMITED (GANANOQUE WORKS) AND UNITED STEELWORKERS OF AMERICA, LOCAL 3208.

Agreement to be in effect from January 28, 1947, to January 27, 1948, and for a further

period of one year unless notice is given by either party. This agreement is similar to the one in effect at Hamilton between The Steel Company of Canada, Ltd., and the United Steelworkers of America and summarized below with the following exceptions: Hours of work are 8½ Monday through Friday, 4½ on Saturday, a 48-hour week. Overtime at time and one-half for work in excess of the above regular hours, double time for all work on Sundays and 6 specified holidays. No provision is made for rest periods or the check-off.

HAMILTON, ONT.—THE STEEL COMPANY OF CANADA, LIMITED (CANADA WORKS) AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 3250.

Agreement to be in effect from April 21, 1947, to May 1, 1948, and for an additional year if notice is not given. The company recognizes the union as the certified collective bargaining agency for all eligible employees. There shall be no discrimination, intimidation or coercion either by the company or the union because of membership or non-membership in the union. Check-off: if 15 days after the effective date of the agreement a majority of the employees affected by the agreement voluntarily authorize the company to deduct their union dues from their pay, then the company agrees to deduct monthly the union dues and remit same to the union. This authorization is not revocable until expiry date of agreement in 1948.

Hours of work: 8½ hours Monday through Friday, 5½ on Saturday, a 48-hour week. Shift workers shall work 8 hours (with one 20-minute rest period) six days a week. Females working the Saturday shift shall be allowed a 15-minute rest period. Overtime: time and one-half for work in excess of these hours and for all work on Sundays (except when part of regular shift) and 8 specified holidays. Vacation: one week with pay to employees with one year of continuous service with the company, 2 weeks with pay to employees with 5 years' service and 3 weeks with pay for employees with 25 years' service. Employees with 3 months of service but less than one year are to receive payment on a pro-rated basis in lieu of vacation with pay. Deductions of one day from the vacation period and pay for each unjustifiable absence from work in excess of one day in any calendar month.

Wage rates: company and union agree that those in effect at date of the agreement shall continue during the life of the agreement except if the purchasing power of the dollar shall grossly change when the rates may be discussed further but no change shall be made unless agreed upon between the parties. The company may instal incentive rates whenever they wish.

Provision is made for safety and health, seniority rights and grievance procedure.

GUELPH, ONT.—FEDERAL WIRE AND CABLE COMPANY LIMITED AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 3021.

Agreement of December 1, 1945, amended April 1, 1947, and as such to continue in effect to April 1, 1948, and thereafter from year to year, subject to notice. This agreement was summarized in the LABOUR GAZETTE for February 1946, p. 185. The principal changes follow—2 additional statutory holidays are to be

observed, while on 3 statutory holidays, namely New Year's Day, Labour Day and Christmas Day, employees will be paid at regular rates for the regular hours of work. Vacation: in addition to the week with pay given employees with one year of service with the company, an additional week with pay will be granted employees with 5 or more years' service and 2 additional weeks with pay for those with 15 or more years' service, employees with less than one year of service are to receive 2 per cent of their earnings for the time worked.

OWEN SOUND, ONT.—THE WILLIAM KENNEDY AND SONS, LIMITED AND THE UNITED STEELWORKERS OF AMERICA, LOCAL 2469.

Agreement to be in effect from May 19, 1947, to May 18, 1948, and thereafter until amended or superseded by a new agreement for which at least 30 days' notice is required. The company recognizes the union as the sole bargaining agency for all eligible employees. There shall be no discrimination, intimidation or coercion either by the company or the union because of membership or non-membership in the union. Checkoff: The company agrees to deduct union dues monthly from the pay of employees who so authorize and to remit same to the union. This authorization may be revoked by the employee.

Hours of work: 9½ Monday through Thursday, 9 on Friday, a 47-hour week (after June 28, 1947, a 46-hour week). Overtime: time and one half for work in excess of the above hours, double time for all work on Sundays or assigned day off and 8 specified holidays. Vacation: employees with one year's continuous service with the company shall receive one week's vacation with pay, those with 5 or more years' continuous service with the company to receive 2 weeks with pay, those with 3 months service but less than one year to receive one week's vacation with pay equal to 2 per cent of total pay earned up to June 1. A premium of 10 per cent shall be paid employees for night shift (work commencing between 2 p.m. to 3 a.m.). Where 3 shifts are worked, 10 per cent premium shall be paid only for the night or recognized third shift and a premium of 6 per cent for the afternoon or recognized second shift.

Hourly wage rate for certain classes until June 28, 1947, (at which time wage rates will be readjusted to provide the same weekly pay for a 46-hour week): minimum and maximum—moulders, coremakers 88 to 98 cents, crane-men 72½ to 93 cents, welders, cupola tender 79½ to 88 cents, blacksmith 75½ to 88 cents, chipper, truck drivers 72½ to 79½ cents, steam engineers third and fourth class 72½ to 84 cents, shippers 75½ to 84 cents, machine operators 68½ to 79½ cents, most labourers 68½ cents.

Provision is made for seniority rights and grievance procedure.

Construction

TORONTO, ONT.—MEMBERS BUILDERS EXCHANGE AND INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 353.

Agreement to be in effect from June 1, 1947, to May 31, 1948, and thereafter from year to year subject to notice. The companies agree not to employ anyone on electrical construction work who is not a member of the union. No member of the union shall be permitted to work at electrical construction work for anyone who is not a party to the agreement. The union shall not sign the agreement with anyone other than a party whose business is recognized as electrical construction work.

Hours of work: 8 per day Monday through Friday, a 40-hour week. Overtime: time and one half for work on Saturdays between 8 a.m. and noon, all other overtime including Saturday afternoon, Sundays and 8 specified holidays at double time. Where 2 or 3 shifts are employed those other than the day shift shall receive 8 hours' pay for 7 hours work. When work cannot be performed during the day, such work may be done as a straight nightshift of not more than 8 hours with pay for 9 at straight time. Vacation: an additional 2 per cent of annual wage, making a total of 4 per cent, shall be given employees in order to allow 2 weeks' vacation with pay.

Wage rates: for journeymen electricians \$1.45 per hour, for apprentices during second half of first year, 30 per cent of journeyman's rate, during second year 40 per cent, during third year 50 per cent, during fourth year 70 per cent. One apprentice may be employed by each employer, in addition thereto, only one apprentice to three journeymen in a shop.

Transportation and Public Utilities: Electricity and Gas

TORONTO, ONT.—THE CONSUMERS' GAS COMPANY OF TORONTO AND THE INTERNATIONAL CHEMICAL WORKERS' UNION, LOCAL 161.

Agreement to be in effect from February 20, 1947, to January 31, 1948, and thereafter from year to year subject to notice. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE* January 1945, p. 68, with the following changes; vacation: one additional week with pay to employees with 3 or more years' continuous service with the company; statutory holidays are increased to 8 from 6. Wage rates are increased 17 cents per hour to hourly paid employees and approximately the equivalent to weekly paid employees.

Collective Agreement Act, Quebec

Recent Proceedings under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may

apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain

district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, p. 86. Proceedings under this act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the extension of two new agreements, the amendment of nine others, the repeal of one agreement and the correction of one agreement and of a notice of amendment of another. These include the amendment of the agreements for the uncorrugated paper box industry for the province in the June 21 issue of the *Quebec Official Gazette*, for barbers and hairdressers at Valleyfield and for the railway car and bus manufacturing industry at Montreal and the correction of the agreement for barbers and hairdressers at Sherbrooke in the June 28 issue, and the correction of a notice of amendment of the agreement covering printing trades at Montreal in the July 5 issue. All the others are summarized below.

Requests for a new agreement for barbers and hairdressers at Valleyfield and for an amendment of the agreement for building trades at Hull were gazetted June 21. Requests for the amendment of the agreements for the corrugated paper box industry for the province, for printing trades at Montreal and for building trades at St. Hyacinthe were gazetted June 28. Requests for the amendment of the agreements for men's and boys' clothing industry for the province and for hardware and paint stores at Quebec were published July 5. Requests for the amendment of the agreements for grocers and butchers at Joliette, building trades at St. Johns and Iberville and a request for a new agreement for shoe repairers at Three Rivers were published July 12. A request for a new agreement for building trades at Sherbrooke was gazetted July 19.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing: Fur and Leather Products

RETAIL FUR INDUSTRY, MONTREAL

An Order in Council, dated June 11, and gazetted June 21, amends the previous Orders in Council for this industry (L.G. Nov., 1944, p. 1368; April, 1945, p. 517, Aug., p. 1197, Oct., p. 1520; Sept., 1946, p. 1249). Minimum weekly wage rates: cutters \$48 and \$56, operators (male) \$36 and \$44, (female) \$28 and \$34.40, finishers (male) \$32 and \$39.20 (female) \$28 and \$34.40, blockers \$25.60 and \$35.20, female coat closers \$34.40, lining makers who cut and sew \$32, finishing-foreladies and female finishers who distribute work to others or who themselves execute entire finishing work \$36, apprentices from \$12 per week during first 6 months to \$22 during fifth 6 months, apprentice cutters or trimmers from \$36 during first 6 months to \$46 during sixth 6 months. However, every employee receiving wages higher than the minimum rate of the agreement actually in force is entitled to a minimum increase of 5 per cent on the rate actually paid to him. Vacation: one-half day with pay for each month worked; 2 weeks with pay after 3 years' continuous service.

TANNERY EMPLOYEES, PROVINCE OF QUEBEC

An Order in Council, dated July 9, and gazetted July 19, amends the previous Orders in Council for this industry (L.G., Mar., 1945, p. 349, April, p. 517; May, 1946, p. 627, June, p. 782, Aug., p. 1092, Sept., p. 1247, Oct., p. 1445; Jan., 1947, p. 48). A new party was added to the agreement in the June 7 issue of the *Quebec Official Gazette*. Wage rates: except for stationary enginemen, maintenance men (millwrights) and watchmen, at least 60 per cent of all male employees shall be paid 65 cents per hour in zone I, 61 cents per hour in zone II and 55 cents per hour in zone III; an additional 25 per cent of the employees must be paid at least 50 cents in zone I, 47 cents in zone II and 41 cents in zone III; the remaining 15 per cent of employees must be paid at least 35 cents in zones I and II and 30 cents in zone III. Vacation: every employee is entitled to an annual vacation of 7 days. After 2 months or more of continuous service with his employer during the period between January 1 and December 31 of the year preceding the vacation, he is entitled, for his vacation, to a remuneration equivalent to 2 per cent of the wages earned during the said period including vacation pay. The annual vacation with pay cannot be replaced by a compensating indemnity. Piece work rates already established by agreement, prior to January 10, 1947, which are higher than the hourly rates fixed by the present agreement must be maintained. This amendment also provides that overtime shall apply to watchmen as well as to other employees.

Manufacturing: Textiles and Clothing

MEN'S AND BOYS' CLOTHING INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated June 18, and gazetted June 28, amends the previous Orders in Council for this industry (L.G., Aug., 1944, p. 1005, Sept., p. 1141, Nov., p. 1368; Oct., 1945, p. 1520; Aug., 1946, p. 1093, and previous

issues) by providing that the Joint Committee may grant a special permit allowing a redistribution in the weekly hours of work.

Construction

BUILDING TRADES, QUEBEC

An Order in Council, dated July 9, and gazetted July 19, extends the term of the previous Orders in Council for this industry (L.G., Aug., 1944, p. 1007; Mar. 1946, p. 317; Aug., p. 1094; Oct., p. 1445, and previous issues) to October 1, 1947. This agreement was previously extended to August 1, 1947, in the May 3 issue of the *Quebec Official Gazette*.

BUILDING TRADES, ST. JEROME

An Order in Council, dated July 9, and gazetted July 19, amends the previous Orders in Council for this industry (L.G., Feb., 1945, p. 182; Oct., p. 1520; Nov., 1946, p. 1585; Mar., 1947, p. 371, and previous issues). A new party was added to the agreement in the April 19 issue of the *Quebec Official Gazette*. The present amendment states that work performed between 5 p.m. and 8 a.m. is considered as overtime work unless it is performed by a second or third shift of the same employer. Work performed between 5 p.m. and 10 p.m. is to be remunerated at time and one-half, double time for work between 10 p.m. and 8 a.m. The Parity Committee must be notified, in writing, of the exact duration of overtime to be worked, and the employer must first obtain a permit from the Labour Inspector and show it upon request to the inspector of the Parity Committee.

BUILDING TRADES, JOLIETTE

An Order in Council, dated July 9, and gazetted July 19, amends the previous Orders in Council for this industry (L.G., July, 1944, p. 867; June, 1945, p. 873; Sept., 1946, p. 1252; Dec., p. 1773). Minimum hourly wage rates: bricklayer, block and terra-cotta layer, mason and stone cutter on job, plasterer, marble layer, tile and terrazzo layer, steam, gas or electric shovel operator 90 cents in zones I and II; electrician, tinsmith-roofer, saw filer, screen (wood and metal), window-frame, steel partition and door erector, weatherstripper, plumber and steamfitter 90 cents in zone I, 85 cents in zone II; carpenter-joiner 90 cents in zone I, 80 cents in zone II; commercial letterer \$1 in both zones; cement finisher 85 cents in zone I, 80 cents in zone II; lather (metal), reinforcing steel worker 85 cents in both zones; fireman (construction), compressor operator 80 cents in zone I, 75 cents in zone II; drill operator 80 cents in both zones; pile driver, wood or concrete, painter-guildler 85 cents in zone I, 75 cents in zone II; celanite mixer, mortar mixer, caulker, brick, blocks, mortar and terra-cotta carrier 70 cents in zone I, 65 cents in zone II; lather (wood) 75 cents in zone I, 70 cents in zone II; painter 70 cents in zone I, 60 cents in zone II; labourer (common worker) 60 cents in zone I, 55 cents in zone II. Foremen directing a gang of 4 men or more shall be paid 10 cents more per hour than the rate established for the trade.

Transportation and Public Utilities: Water Transport

LONGSHOREMEN (OCEAN NAVIGATION), MONTREAL

An Order in Council, dated July 9, and gazetted July 19, makes obligatory the terms of a new agreement between certain shipping and stevedoring companies and the International Longshoremen's Association, Local 375. Agreement to be in effect from July 19, until December 31, 1947, and thereafter from year to year, subject to notice. Territorial jurisdiction comprises the Harbour of Montreal.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, Sept., 1946, p. 1253, Oct., 1940, p. 1075 and Dec., 1938, p. 1423, with the following principal changes:

Hours: the starting time for day work shall be 8 a.m. and 1 p.m.

Wages: \$1.13 per hour for day work and \$1.69½ for evening and night work. Rates for special cargoes, specified in the agreement, are \$1.28 per hour for day work and \$1.92 per hour for evening and night work. Orders for men required at 7 p.m., who have not been working during the afternoon, shall be given on or before 1 p.m. When men resume work at midnight, they shall be paid full rate until regular knocking off time, except when shift finishing, in which case they will be paid until their hatch is completed, but not less than 2 hours. If men have to be dismissed owing to weather conditions, they shall be paid until time dismissed, but not less than 2 hours. Double time shall be paid for work on Sundays, St. John the Baptist Day, Dominion Day and All Saints Day.

Trade

RETAIL STORES, MEGANTIC

An Order in Council, dated July 3, and gazetted July 12, repeals the Order in Council making this agreement obligatory and amendment (L.G., Dec., 1945, p. 1826; Dec., 1946, p. 1774).

RETAIL STORES, GRANBY

An Order in Council, dated July 9, and gazetted July 19, makes obligatory the terms of a new agreement between The Retail Merchants Association of Canada Inc., Granby Branch, and "Le Syndicat des Employés de Commerce de Granby Inc." Agreement to be in effect from July 19, 1947, to July 18, 1948, and thereafter from year to year, subject to notice. Territorial jurisdiction comprises the city of Granby and the township municipality of Granby.

Hours: 55 hours per week. Overtime is payable at time and one-half. No work to be performed on Sundays and specified holidays.

Minimum wage rates: male and female clerks, class A (75 per cent) \$18 per week, class B (25 per cent) \$16; extra clerks, male 40 cents per hour, female 35 cents per hour; deliverer (trucks) \$20 and \$23; deliverer's helper \$9 and \$17.50 per week; messenger (bicycle and maintenance paid by employer) \$9 per week, (bicycle and maintenance paid by employee) \$11 per week. Vacation: one week with pay after one year's service.

Industrial Standards Act, Etc.

Schedule of Wages and Hours Recently Approved by Provincial Order in Council in Ontario

IN six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers or employees in any (or specified) industries, the provincial Minister charged with the administration of the Act, may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister con-

siders that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the *LABOUR GAZETTE*, October, 1940, page 1077. Schedule of wages and hours recently made binding by Orders in Council under these Acts is summarized below.

Ontario

Construction

SHEET-METAL WORKERS (CONSTRUCTION), PORT ARTHUR AND FORT WILLIAM

An Order in Council, dated May 15, and gazetted May 31, makes binding the terms of a new schedule for sheet-metal workers at Port Arthur and Fort William, to be in effect from June 10, 1947, "during pleasure." Hours: 8 per day from Monday to Friday, a 40-hour week. Overtime and all work on Sundays and

7 specified holidays is payable at double time. However, 4 hours' overtime may be added to any regular working-day and regular work may be performed between 8 a.m. and 5 p.m. Saturday at time and one-half. Minimum wage rate: \$1.15 per hour. Where 2 or 3 shifts are worked on the same job, the minimum rate shall be \$1.20 for the second shift and \$1.25 for the third shift. The advisory committee may fix a special minimum rate for handicapped workers. This schedule is subject to The Hours of Work and Vacations with Pay Act, 1944.

Fair Wage Conditions in Dominion Government Contracts

THE Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from

the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During June

During the month of June the Department of Labour prepared, on request, 53 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into during this period by the various Government departments appear hereunder:—

(1) *Works of Construction, Remodelling, Repair or Demolition*

Note: The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

CANADIAN COMMERCIAL CORPORATION

Construction of "Watchman" Type Fence, R.C.A.F. Station, Patricia Bay, B.C. Name of contractors, Dominion Steel and Coal Corporation, Limited, Montreal, P.Q. Amount

of contract, \$2,266.11. A fair wages schedule, dated January 30, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Carpenters and joiners	\$ 1.25
Cement finishers	1.00
Cement and concrete mixer operators:	
Steam	1.00
Gas. or elec.86
Compressor operators (gas. or elec.)86
Drivers (teamsters)80
Labourers80
Motor truck drivers85
Painters and glaziers95
Sheet metal workers	1.18
Watchmen60

Construction of two Loran Stations, Northwest Territories. Name of contractors, The Canadian Bridge Company, Limited, Toronto, Ont. Amount of contract, \$210,000. A fair wages schedule, dated April 9, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Carpenters and joiners	\$ 1.50
Cement and concrete mixer (operators (gas. or elec.)	1.00
Engineers on steel erection	1.50
Labourers	1.00
Structural steel workers	1.50

DEPARTMENT OF MINES AND RESOURCES

Erection of camp site building, Alaska Highway, Yukon Territory. Name of contractors, The British Yukon Navigation Company, Limited, Whitehorse, Yukon Territory. Amount of contract, \$30,000. A fair wages

schedule, dated May 2, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Blacksmiths	\$ 1.50
Blacksmiths' helpers	1.00
Brick and hollow tile layers	1.75
Brick and hollow tile layers' helpers (mixing and tempering mortar)	1.15
Carpenters and joiners	1.50
Cement finishers	1.25
Cement and concrete mixer operators	1.25
Enginemmen, stationary	1.25
Labourers	1.00
Motor truck drivers	1.00
Motor truck driver and truck	2.00
Painters and glaziers	1.25
Sheet metal workers	1.50
Shinglers (wood, asbestos)	1.50
Tractor operators	1.30
Watchmen	1.00

Trenching for and laying pipe for the water supply at the Shubenacadie Indian Agency, N.S. Name of contractors, Municipal Spraying and Contracting Limited. Amount of contract, \$12,855. A fair wages schedule, dated January 9, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Cement and concrete mixer operators:	
Steam	\$.75
Gas, or elec.60
Compressor operators (gas, or elec.)60
Labourers50
Motor truck drivers55
Motor truck driver and truck	1.55
Pipe layers, caulkers and solderers60
Plumbers and steamfitters75
Powdermen60
Sheet metal workers75
Tractor operators:	
Letourneau, etc.70
Small60
Watchmen45
Welders and burners (acetylene or elec.)70

NATIONAL HARBOURS BOARD

Replacement of dolphins, No. 3 Jetty, Vancouver Harbour. Name of contractors, Vancouver Pile Driving and Contracting Company, Limited, Vancouver, B.C. Amount of contract, \$8,766.40. A fair wages schedule, dated May 5, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Labourers	\$.80
Pile driver and derrick foremen	1.55
Pile driver and derrick engineers	1.37
Pile driver and derrick bridgemen	1.30
Pile driver and derrick boommen	1.30
Pile driver and derrick men (rigging, setting and signalling)	1.30
Pile driver and derrick firemen94
Watchmen60

DEPARTMENT OF PUBLIC WORKS

Harbour improvements, Breen's Pond, N.S. Name of contractor, Mr. F. W. Digdon, Mulgrave, N.S. Amount of contract, \$111,587. A fair wages schedule, dated April 21, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Blacksmiths	\$.70
Blacksmiths' helpers55
Boatmen (rowboats)50

Labour Law

Recent Regulations under Provincial Legislation

RECENT Provincial regulations include Orders in Saskatchewan which exempt certain classes of workers entirely from the Hours of Work Act, 1947, and permit other workers to exceed the eight and 44-hour limits set by the Act, provided time and one-half is paid for hours worked after the limits imposed by the Orders.

In Ontario, regulations under the Hours of Work and Vacations with Pay Act were amended to provide for payment in lieu of holidays for workers who cease to be employed after working for an employer for upwards of three months.

British Columbia Male Minimum Wage Act

The overtime rate of time and one-half after eight and 44 hours is not payable to workers undergoing training in topographic mapping in connection with the logging industry, under an amendment to the Minimum Wage Order governing logging, (No. 1, 1947) (L.G., 1947, p. 198). The amending Order, which is to remain in force to September 30, 1947, was made on May 30 and gazetted June 5.

Ontario Hours of Work and Vacations With Pay Act

Persons employed in growing flowers, fruit or vegetables other than those engaged in selling these products or in floral designing were declared exempt from the provisions of the above Act relating to hours of work by an amendment to the regulations (L.G., 1945, p. 1844) which was made on June 12 and gazetted July 12.

Other amendments made on May 26, gazetted June 14 and effective July 1, add new stipulations concerning daily working hours, and provide for holiday pay with respect to workers who from time to time move from one employer to another.

The Act limits working hours to eight per day but the amended regulations permit this limit to be exceeded in an industry under the Industrial Standards Act to the extent provided by a schedule for that industry.

Hours of workers in restaurants must be confined within a 12-hour period. This pro-

vision does not apply to an establishment where food and lodging are regularly furnished to the public or to the members of a club not organized for pecuniary gain.

As regards holidays, a new section provides that unauthorized absences from work in excess of one day in each month of the working years, which are not due to illness, may be deducted from the holiday period.

Where a worker leaves after working for an employer for upwards of three months, with the exception of workers in the construction industry and those who are dismissed by the employer, the employer must pay him, in lieu of holidays, an amount equal to two per cent of his total earnings for the period in respect of which he is entitled to a holiday with pay. Such payment is to be in the form of "vacation with pay credit stamps" affixed by the employer to the worker's stamp book. The latter is to be provided by the Industry and Labour Board, on request, for 25 cents.

As before, a worker in the construction industry must be given vacation with pay credit stamps, purchased by the employer, at the end of each regular pay-period, in payment of the amount of holiday pay to which he is entitled for such period.

On or after June 30 in each year an employee may cash his "vacation with pay credit stamps" at any provincial savings office or chartered bank.

Saskatchewan Hours of Work Act

The Hours of Work Act, 1947, limits working hours to eight and 44 in cities, in all factories in the Province, and in offices and shops in places covered by the Minimum Wage Act; unless wages are paid at the rate of time and one-half after these limits. Recent Orders under the Act, effective on July 1, provide some measure of relaxation from these standards for certain classes of workers. Orders 1-3 affecting shop workers, professional and non-professional staffs in city hospitals, and lawyers and students-at-law were approved by Order in Council on June 6, and gazetted June 14. Orders 4, 6-10, approved by Order in Council on June 20 and gazetted June 27,

apply to workers in creameries, poultry-processing plants, garages, automobile service stations, grain elevators, fish-filleting plants, and sawmills, retail bread and milk salesmen, and to certain truck drivers and construction men. Orders 5, 11 and 12 approved by Orders in Council on July 9 and 16, gazetted July 25, deal with employees of daily newspaper publishers, Regina bus and street car operators, and chartered accountants and students in accountancy.

CLASSES EXEMPT

Entirely exempted from the Act are: registered medical doctors and internes; barristers, solicitors and students-at-law; workmen in grain elevators, feed or seed plants in or within a five-mile radius of any city; highway construction or construction of water, gas, oil or other pipe lines running into or through a city or within a five-mile radius; truck-drivers delivering milk to creameries who are paid \$115 or more per month; retail bread and milk salesmen; fish-processing plants; and sawmills or planing-mills in connection with logging operations which are carried on north of the northern boundaries of Township 52, or in any other part of the Province not within a five-mile radius of any city, town or village to which the Minimum Wage Act applies.

SHOPS

Workers in shops in cities with less than 10,000 people or within a five-mile radius, or in towns and villages, may be employed up to 11 hours on any one day of the week without payment of time and one-half, but time and one-half must be paid for any hour or part of an hour beyond 11 on any such day or beyond eight on any other day or beyond 44 in any week.

CITY HOSPITALS

Registered and student nurses are exempted from the Act, subject to the condition that the former must be paid time and one-half for all hours worked in excess of 96 in two consecutive weeks.

Non-professional staff in hospitals are exempted from the 44-hour-week limit until December 31, 1947, but they may not be required to work more than eight hours in a day or 48 in a week unless they are paid time and one-half thereafter.

CREAMERIES

With respect to workers in creameries, other than office workers, and in poultry-processing

plants in or within a radius of five miles of any city, daily hours may be extended to nine without payment of overtime. The overtime rate of time and one-half, however, applies after nine hours and after the "normal monthly hours of work." This term is defined as the number of hours obtained by multiplying seven hours and twenty minutes by the number of working days in a month.

GARAGES

Hours of garage and automobile service-station workers in or within a five-mile radius of any city are restricted to nine and 48, after which time and one-half must be paid.

Where weekly hours of these worker previously exceeded 48, rates paid otherwise than on an hourly or daily basis must not be reduced within 12 months, but the employer must increase an hourly, daily or piece-rate to an amount which exceeds it by not less than the percentage by which the previously established weekly hours exceeded 48. He is not required, however, to increase any rate by more than 25 per cent. Such increased rate must not be reduced within 12 months. An increased rate must be established to the nearest cent except where, by established practice, the rates paid are fixed to the nearest half cent.

OIL-TRUCKS

Employers of truck-drivers delivering gasoline and oil to farms, garages and automobile service stations must keep a record showing the number of hours over 44 in a week worked by an employee, and such hours are to accumulate to the employee's credit. In a week in which he works less than 44 hours, each hour less than 44 is to cancel an hour already accumulated; no reduction in the weekly wage is permitted. On July 1 of each year beginning July 1, 1948, or one year after the beginning of the driver's employment if he began work after July 1, 1947, or on any date approved in writing by the Minister, the employer must determine the number of hours to the workman's credit, and within 30 days pay him at the rate of time and one-half for each such hour or part of an hour.

When a truck-driver leaves his job, he must be paid at the regular hourly rate for all hours standing to his credit, but if he is dismissed he must be paid time and one-half for these hours.

AIRPORT CONSTRUCTION

Workers engaged in building an airport outside the limits of a city and within a radius of five miles of such city may work more than 48 hours in a week if they are paid time and one-half thereafter.

NEWSPAPERS

Editorial writers, reporters, advertising salesmen, advertising servicemen or supervisors of delivery boys employed by the publisher of a daily newspaper must be paid time and one-half for all time worked in excess of "normal monthly hours of work." The term is defined as the number of hours obtained by multiplying seven hours and twenty minutes by the number of working days in a month.

BUSES AND STREET CARS

Employees of the City of Regina who operate street cars, omnibuses and other vehicles used for public transportation may not be required to work more than nine hours a day or more than their "normal monthly hours of work," defined as above. For work after these limits they must be paid time and one-half.

CHARTERED ACCOUNTANTS

Chartered accountants and students in accountancy are exempted from the eight and 44-hour limits of the Act during any period when they are not employed in or within a five-mile radius of any city, town or village in which the office of any practising public accountant is located.

Canadian Vocational Training

DURING the month of June, 1947, the number of veterans being trained in all types of schools continued to decline. In addition, the numbers undergoing Training-on-the-Job in industry fell to below 10,000 for the first time since June, 1946.

At June 30, 1947, the number in training was 21,041, as compared with 26,910 at the end of May, 1947. The numbers in various types of training were distributed as follows:—

CVT Vocational Schools.....	6,573
CVT Pre-matriculation Schools	2,214
Training-on-the-Job	9,618
Private Schools.....	2,636

As the numbers under training decreased, it became necessary to consolidate the training facilities in different parts of the country. This resulted in the closing of CVT schools at Edmundston, N.B., Kitchener, Ontario, London, Ontario, Fort William, Ontario, Brandon, Manitoba, Prince Albert, Saskatchewan, and Medicine Hat, Alberta. Several other schools are now in the process of closing and will cease operations during the month of September.

In the closing of schools, it has been necessary to keep in mind that veterans are still being approved for Vocational and Pre-matriculation training. However, the decrease in numbers may be gauged from the fact that during the month of July, 1947, those approvals amounted to 642 for Vocational Training and only 44 for Pre-matriculation Training. A sufficient accommodation is being retained to

provide for the numbers who are likely to come forward for training between now and the end of the present calendar year.

The number of persons awaiting training for whom accommodation cannot be provided has fallen from 605 at the end of May, 1947, to 550 at the end of June, 1947. The bulk of those awaiting training are still desirous of training in three or four trades where accommodation is still lacking. The largest waiting lists are in Barbering and Watch Repair.

End of Training Rights

The Department of Veterans Affairs issued a statement recently asking veterans who plan to undertake training to make application for training as soon as possible—for veterans discharged comparatively recently or undergoing treatment, the right to apply for vocational training ends December 31 of this year. Because of the fact that there are still a few months, a number of veterans are deferring their applications in order to take advantage of summer employment.

The Department warned that certain institutions and classes were being closed because there were not sufficient veterans taking these particular courses. "The expense of these classes cannot be justified on the mere assumption that next November or December might bring an increased number of applications for them. Thus, it is imperative that those who require training commence while facilities are still adequate."

Institute of Textiles Completes First Year

THE Provincial Institute of Textiles established in Hamilton, Ontario in 1946 (L.G., 1946, pp. 863 and 1371) has completed its first term. At the exercises marking the closing of the first year evening school division, it was reported that the evening school students had come from 35 textile firms within a radius of 50 miles of Hamilton.

The employers of the students were hosts at a dinner at which Hon. Dana Porter, Provincial Minister of Planning and Development emphasized the benefits to be obtained by the students and the industry from the specialized technical courses.

Prizes were presented to eleven top-ranking students by the President of the Canadian Allied Textile Trades Association. Certificates

of standing for successfully completing the courses of instruction were presented as follows: course in Woollen Manufacture I, 48 certificates; course in Cotton Manufacture I, 33 certificates; course in Elementary Textile Mathematics, 18 certificates; course in Textile Fibres, 34 certificates; course in Introduction to Textile Chemistry and Dyeing, 21 certificates.

It was announced that day school classes will commence in September, 1947. In the meantime, the Principal of the Institute, Mr. C. C. Ashcroft, is visiting England to make a first-hand study of textile education in the British Isles and to endeavour to obtain British equipment for the Institute.

Unemployment Insurance

Unemployment Insurance Statistics, June, 1947

Analysis of Claims for Benefit—Adjudication of Claims—Status of Fund

REPORTS from the Dominion Bureau of Statistics show that a total of 21,365 claims for Unemployment Insurance benefit was filed in Canada during June, compared with 27,603 in May and 30,646 during June, 1946. Only in Prince Edward Island and Nova Scotia did claims filed during June slightly exceed those registered in May.

On June 30, there were 47,817 (31,109 male and 16,708 female) live claims (ordinary) on the unemployment register, as against 59,410 (40,164 male and 19,246 female) at May 31 and 82,382 (60,210 male and 22,172 female) on the last working day of June, 1946. In addition to the ordinary claims a total of 2,616 (2,230 male and 386 female) other claims were recorded on the live unemployment register at June 30, compared with 3,264 (2,800 male and 464 female) at May 31. These are largely short-time claims registered by those who have been put on short time at the establishment in which they are employed, but a few are casual claims, filed by persons who, on the basis of their employment experience, are classed as casual workers.

During June, 27,470 claims were adjudicated, 18,025 being considered entitled to benefit and 9,445 not entitled to benefit. The chief reasons for non-entitlement were "insufficient contributions while in insurable employment" 2,853 cases, "refused an offer of work and neglected an opportunity to work" 2,734 cases, "voluntarily left employment without just cause" 1,938 cases.

In Table 6, persons on the live unemployment register at June 30 are classified according to the number of days they have been

continuously on the register since the last initial or renewal claim was filed. For this purpose only those initial claims that immediately follow the termination of a benefit year are ignored. Thus, the objective in this table is to classify according to the duration of the current case of unemployment.

Benefit was paid during June to 62,221 persons who received a total of \$2,153,537 for 1,122,849 compensated unemployed days, compared with 83,982 persons paid \$3,072,952 for 1,584,428 unemployed days in May and 103,231 persons paid \$4,472,995 for 2,243,727 unemployed days during June, 1946.

The average duration of the unemployment compensated was, then, 18.0 days in June, 18.9 days in May and 21.7 days in June last year. The average amount of benefit paid per beneficiary was \$34.61 in June, \$36.59 in May and \$43.33 in June, 1946. The average amount of benefit paid per compensated day of unemployment was \$1.92 in June, \$1.94 in May and \$1.99 in June, 1946.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending June 30, 1947 showed 2,736,177 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1947, an increase of 155,423 since May 31, 1947.

As at June 30, 1947, 178,572 employers were registered as having insurable employees representing an increase of 2,228 since May 31, 1947.

TABLE 1.—SUMMARY OF REGISTRATIONS OF EMPLOYERS AND EMPLOYEES BY REGIONS FROM APRIL 1, 1946 TO JUNE 30, 1946 AND FROM APRIL 1, 1947 TO JUNE 30, 1947

Library Catalogue

Mr. J. G. Bisson, Chief Commissioner, Unemployment Insurance Commission, recently approved the issuing of a library catalogue which outlines the titles, authors' names, and other relevant information of

publications held in the Commission's library. Distribution has been made to officers of the Commission at head office, regional office and local office levels, as well as to librarians of other government departments.

The column for "Bulk" includes Miscellaneous \$1,742.38 and Contributions for Armed Service \$12,182,019.61.

The column "Interest on Investments and Profit on Sale of Securities" represents:

(a) The exact amount of interest earned for each calendar fiscal year and the approximate amount for each month in the current year;

(b) Profit on sale of securities taken into account at the end of each year only.

* April receipts for Stamps and Meter and the proportionate Government Contributions for these items were included with figures for March 1947.

Digest of Selected Decisions of the Umpire Under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945 number of the LABOUR GAZETTE and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

The selected decisions are being published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU. B. 98 (27 June, 1946)

Held that when a person has been unemployed for approximately four months, work away from home at wages prevailing in the district and where housing accommodation is available is suitable employment within the meaning of the Act.

The material facts of the case are as follows:—

The claimant, a single woman, aged 28 years, was last employed by a defence industry from January 14, 1942 to June 4, 1945, as a detonator operator, receiving 57 cents an hour.

She made claim for benefit on June 14, 1945, which was allowed and she received benefit until October 18, 1945, when she was disqualified by the Insurance Officer on the grounds that she had, without good cause, refused to apply for a situation in suitable employment which was notified to her on October 2, 1945.

From this decision the claimant appealed to the Court of Referees which, by a unanimous decision, reversed the decision of the Insurance Officer on the grounds that the claimant's domestic circumstances interfered with the acceptance by her of the employment of which she was notified and that there was no transportation provided to enable her to be home each evening.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the grounds that the claimant is without legal domestic obligations and that after four months of unemployment and receiving benefit for three months she should be prepared to accept employment which involves living away from home if it is otherwise suitable.

DECISION

The decision of the Umpire was that the claim should be disallowed and gave as his reasons:—

According to the submission, the claimant had been in receipt of benefit for a period slightly over three months. The employment to which the claimant was notified was approximately 25 miles from her home, the wages offered being 36 cents an hour and the hours of employment fifty a week. It is stated that on a piece-work basis the wages earned average from \$20 to \$25 per week. The rate offered was the prevailing rate for female employees in the district and room and board was available for approximately \$8 per week. The reasons given by the claimant for refusing to accept this employment were that it was too far away from her home, that there was no transportation of any kind to enable her to travel between the place of employment and her home and that she had to be home at nights due to the illness of her mother, a medical certificate having been produced to this effect.

The question to consider is whether the claimant has without good cause refused suitable employment of which she was notified.

There was evidently very little prospect of the claimant finding employment of a type that could be regarded as suitable in her home district. She has already been unemployed for approximately four months and it is evident from the submission that if the claimant intended to re-establish herself in the labour market she would have to obtain employment outside her own district. The work offered to her was of a type which she was capable of performing and at wages that were the accepted rate for the district. In refusing to accept work outside of her own district, the claimant is restricting her availability. If her domestic obligations are of such a nature as is claimed, then it might be considered that she was not available to accept suitable employment.

I consider that where a person has been unemployed for a period of approximately four months and is requested to accept employment away from home at wages prevailing in the district and where housing accommodation is available, then such employment must be regarded as suitable within the meaning of the Act.

CU. B.101
(28 June, 1946)

Held that a taxi driver who was temporarily suspended by his employer following a police court conviction for dangerous driving while on duty is deemed to be separated from his employment by reason of misconduct within the meaning of the Act.

The material facts of the case are as follows:—

The claimant, a married man, aged 46 years, was employed as a taxi driver from 1939. On January 7, 1946, he was charged in Police Court with dangerous driving, was found guilty and fined \$35 and his licence was suspended for thirty days. As a consequence he was discharged from his employment on January 10, 1946, and re-employed by the same employer after the thirty-day suspension of his licence had expired.

He applied for benefit on January 14, 1946. The Insurance Officer disallowed the claim and disqualified the claimant on the ground that he had lost his employment by reason of his own misconduct.

From this decision the claimant appealed to the Court of Referees before which he appeared. By unanimous decision the Court allowed the claim on the ground that the misconduct referred to in the Act refers to misconduct arising out of relationship of the employer and the employee and not to

infractions of the law which indirectly may affect the employee's qualifications to carry on his employment.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the grounds that by his own misconduct the claimant lost his licence, thereby depriving himself of the ability to carry out his usual occupation as a taxi driver and such misconduct is within the meaning of the Act.

DECISION

The Umpire's decision was that the claim should be not allowed and gave as his reasons:—

The questions to decide are whether misconduct as shown in this case can be deemed to be misconduct within the meaning of the Act and whether the claimant lost his employment through his own misconduct.

In this instance there is no doubt that misconduct has been proven by the usual course of judicial procedure.

It was during his working hours and whilst on duty that the claimant was guilty of two offences, driving at an excessive speed and driving past a stop signal at a street intersection.

This offence or misconduct was during the course of and in connection with this employment. Proven misconduct under these circumstances is in the same category as proven misconduct against any insured person who works at some other occupation and becomes separated from employment as the result of his misconduct. On the other hand, had the offence been committed outside the hours of his normal employment the question would have to be considered from a different standpoint.

Employment, Hours and Earnings

Introduction

A HIGH level of seasonal activity in all branches of industry was straining Canadian manpower resources throughout the spring and early summer months of 1947. Labour surpluses had been reduced to the lowest point since V-J Day. In general, the current expansion in production was contributed to the improved material supply situation and the normal seasonal upswing. Since peak employment is not normally reached until October, it was expected that the shortage of labour might become acute during the next few months. In the meantime, students on summer vacation would provide an additional source of labour.

The general competition for qualified labour was reflected in high labour turnover, rising wages, and increased pressure for immigration. In primary industries, particularly mining and logging, the need for labour was most urgent. Inter-regional transfers of workers had helped a great deal. The 4,500 Polish veterans brought from Europe since last fall had eased the farm labour situation considerably, although the supply of seasonal harvest workers was currently below demand.

By the end of July, unplaced applicants registered at National Employment Service Offices had fallen below the 100,000 mark, or 35,000 fewer than the yearly low for 1946. In general, the available supply had been narrowed down to the partially-qualified, the physically unfit, the over-aged, and the unemployed in depressed areas. An indication of employment expansion was also provided in the decline in the number of persons claiming unemployment insurance. Live claims for unemployment insurance dropped from 59,000 at June 1 to 48,000 one month later.

Employment in the eight leading industries (as reported to the Dominion Bureau of Statistics by employers having 15 or more employees) gained by 50,000 during May. Seasonal activity in mining, transportation, and services boosted employment beyond all previous post-war records, with the exception of that recorded at December 1, 1946. The index of employment (June 1, 1941=100) rose by 3.4 points during May to total 120.8 at June 1. At that date, employment totalled 1,899,000.

The negotiating of collective agreements, which had begun to take place during the

spring months, was making itself felt in a steady rise in wage rates during May. At June 1, hourly earnings of hourly-rated employees in manufacturing totalled 79.8 cents as against 78.3 cents one month before. At the same time, the average work-week was being reduced, falling from 43.2 hours during the last week in April to 42.9 hours, one month later.

The Maritime region reported that the over-all outlook for employment was brighter. Almost 2,000 men and women had been moved to jobs in Ontario mostly from the Cape Breton and New Glasgow districts. This had relieved the unemployment burden in these areas considerably. The coal strike ended early in June. A seven million dollar contract with the Argentine Government will sustain shipbuilding employment at Halifax for two or three years. Building construction was progressing well, with only minor shortages of skilled building tradesmen; a number of contracts, however, had been postponed because of high building costs. The pulpwood industry was increasing its labour demand in order to offset delays caused by wet weather and fly conditions; orders for experienced cutters and peelers exceeded the supply. Tourist reservations pointed to a record season.

In the Quebec region, demand for labour was increasing in all industries. The mining industry faced a serious labour shortage—underground workers were leaving for outdoor summer jobs and replacements could not be obtained because of the general competition for labour. The distribution of another group of Polish veterans was recently completed and was expected to ease considerably the scarcity of year-round farm workers. Construction continued at a record level and a shortage of skilled tradesmen was developing. Residential building had dropped slightly, but institutional and commercial building was at peak activity. Many large engineering projects were under construction, i.e., the power development extension of the Quebec Hydro, costing from two to three million dollars. All transportation lines were very busy; Montreal harbour was so crowded with vessels that some were forced to anchor in mid-stream awaiting a berth.

SELECTED LABOUR MARKET INDICATORS

1945 — 1946 — 1947

SUMMARY OF STATISTICS ON EMPLOYMENT CONDITIONS

(†) Not available.

(1) Estimates are based on sample Labour Force Survey of the Dominion Bureau of Statistics.

All figures represent persons 14 years of age and over.

(2) Statistics are based on the eight leading industries. Data are compiled from reports of firms with 15 or more employees.

(3) Weekly average for month in non-agricultural industries reporting to National Employment Service.

(4) Average hourly earnings and man-hours apply to manufacturing only.

(5) During the month.

(6) For more recent figures, see below, under Operations of the National Employment Service.

The Ontario region reports that seasonal activity in all fields was creating a great demand for workers. Firms were continuing to weed out incompetent workers, with the result that much of the available labour supply was composed of near-employables. In manufacturing, there was an active labour demand despite some raw material bottlenecks. Labour turnover was a problem for firms producing machinery, and steel shortages still hindered production. About 1,700 men and 60 women had been brought from Nova Scotia to work in Ontario factories, and many repeat orders for these workers indicated the high quality of the transferees. An additional group of 670 Polish veterans recently were distributed to farms within the region, but there was still a strong seasonal demand for western harvesters. There was a heavy need for pulpwood cutters but hot weather and the fly season made recruiting difficult. Gold production was showing a marked gain over the corresponding period of last year; improvement in labour conditions was the chief factor.

In the Prairie region, labour requirements varied between areas with the heaviest needs reported in the eastern section. Farm workers were in heavy demand in Manitoba; in Saskatchewan, the arrival of two groups of Polish veterans prevented any great farm labour shortage; Alberta reported fairly light labour demand. Approximately 850 women

had been transferred to fruit districts in British Columbia. Several mining companies had started housing programs in an attempt to attract workers and reduce labour turnover. In the manufacturing field, building material firms were working at capacity and sawmills and pulp and paper mills were operating on a 24-hour shift. Iron and steel firms were active and reported a scarcity of skilled tradesmen; one company at Fort William had secured a two million dollar contract with the South African Government for buses. A shortage of construction tradesmen was developing under the pressure of work which had been delayed by wet weather or lack of supplies.

In the Pacific region, the general employment outlook was very bright, and jobs were available at all points in the region. Available supply, however, was concentrated for the most part in Vancouver, New Westminster and Victoria. The construction industry was boosting employment strongly; out-of-town demand predominated. Logging activity was expected to boom now that recent wage negotiations had been successfully completed. The mining industry was expected to face an even greater scarcity of manpower when the University students now employed leave the industry in the fall. Mining employment had been below capacity for some years past and drastic steps were needed in order to obtain additional skilled miners.

Employment and Payrolls at the Beginning of June, 1947

IMPORTANT expansion in employment was reported by leading firms in the eight major industrial groups at the beginning of June as compared with a month earlier; the upward movement was greater than at June 1 in any other year since 1941. The Dominion Bureau of Statistics tabulated information from 17,696 employers with a combined working force of 1,899,247 men and women in the following industries:—manufacturing, logging, mining, communications, transportation, construction and maintenance, trade and services, consisting of hotels and restaurants and laundries and dry-cleaning establishments. This was an increase of 2.7 per cent over their May 1 staffs of 1,849,139. Based on the 1926 average as 100, the index of employment advanced from 179.6 at that date to 184.5 at the beginning of June, when it was the highest in the record for the time of year, exceeding by 8.6 per cent that of 169.9 at June 1, 1946; the situation had then been seriously affected by industrial disputes. Pre-

viously, the high figure for June 1 was that of 181.2 in 1943.

The general trend at the date under review was favourable in all provinces, and in all main industrial divisions. The reported additions to the working forces in manufacturing were moderate, being rather less-than-normal in the experience of earlier years of the record; activity in this group of industries was nevertheless maintained at a high level, the index being at its maximum in the period since September 1, 1945. Among the non-manufacturing classes, there were large gains in mining, transportation and construction; in mining, the partial resumption of operations in the coal fields of Nova Scotia and New Brunswick, following the settlement of the prolonged industrial dispute, contributed materially to the increased volume of employment. Improvement which was important, though on a smaller scale than in the group of industries just mentioned, was also recorded in logging, communications, hotels and restaurants, and trade.

Payrolls

The reporting firms in the eight leading industries at the beginning of June paid \$68,368,861 in salaries and wages for services rendered in the week preceding, a sum which was greater by three per cent than the payrolls which they had distributed at May 1. The weekly earnings¹ of the persons in recorded employment averaged \$36 at June 1, the highest in the record of six years. The per capita figure at May 1 was \$35.89, while at June 1 in earlier years of the record, the averages were as follows: 1946, \$31.68; 1945, \$32.10; 1944, \$31.80; 1943, \$30.93; 1942, \$28.20,

and 1941, \$25.25. In the last 12 months, there has been a gain of 23.4 per cent in the index of aggregate payrolls, accompanying that of 8.6 per cent in the indicated numbers of workers. The per capita earnings have risen by 13.6 per cent. In connection with these percentages, it may be repeated that the situation at the beginning of June, 1946, had been seriously affected by industrial disputes.

When the figures of employment and payrolls in financial institutions are included, the survey shows that the total persons in recorded employment in the nine leading industries at June 1 numbered 1,979,362, as

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, and clay, glass and stone products.

* Consisting almost entirely of hotels and restaurants, and laundries and dry-cleaning plants.

compared with 1,929,175 at the beginning of May. The indicated weekly salaries and wages increased from \$69,359,610 at that date, to \$71,374,146 at the beginning of June. The per capita earnings in the nine industries stood at \$36.06, as compared with \$35.95 at May 1, and \$31.81 at June 1, 1946.

Table II summarizes the latest statistics of employment and payrolls for the major industrial groups, the provinces and economic areas, and the leading industrial cities, and gives comparisons as at May 1, 1947, and June 1, 1946 and 1945. Table I contains a monthly record for the eight and the nine leading industries as a whole, and for manufacturing, showing the movements of employment and payrolls in the period since 1943.

The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100; to facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100. Table I shows that in the period for which information on payrolls is available, the number of persons on the staffs of establishments in the eight leading industrial groups has increased by 20.8 per cent, and the aggregate weekly earnings by 68.5 per cent. Including finance,

the increase in employment from June 1, 1941, to June 1, 1947, amounted to 21.3 per cent while the gain in the salaries and wages was 68.7 per cent. In previous monthly reports, the following factors have been cited as largely responsible for the much greater rise in the payrolls than in employment (1) the payment of higher wage-rates in very large numbers of industries and establishments, in addition to the general increase resulting from the mandatory payment of cost-of-living allowances to the majority of workers; the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage-rates as from February 15, 1944; (2) the progressive up-grading of employees as they gained experience in their work and (3) reductions in the numbers and proportions of women workers.

The gain in employment in manufacturing in the last six years amounted to 17.6 per cent, that in the reported salaries and wages to 63.6 per cent, and in the weekly average earnings, to 43.2 per cent. The increase in recorded employment in the non-manufacturing industries taken as a whole in the last six years was 25.1 per cent, and that in the weekly payrolls 72.2 per cent.

With regard to the marked variations in the average earnings of workers in the different

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

industrial classes it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short time or overtime may also considerably influence the indicated aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of paramount importance.

Sex Distribution of Persons in Recorded Employment

Of the 1,899,247 employees reported at June 1 by the establishments furnishing data in the eight leading industries, 1,495,750 were men and 403,497 were women, there being 788 of the former sex and 212 of the latter in each 1,000 workers in recorded employment. The number of men showed an increase of about 3.5 per cent as compared with May 1, accompanied by a gain of about 0.1 per cent in the number of women; the ratios then indicated had been 782 men and 218 women per 1,000 employees.

Firms in the nine leading industries showed a general advance of 2.6 per cent in employment in the month; the number of men increased by about 3.4 per cent, and the number of women by some 0.1 per cent. The ratio of the latter per 1,000 persons of both sexes in recorded employment in this group of industries therefore declined, falling from 228 at May 1, to 222 at June 1, when the ratio was lower than in any earlier enquiry into sex distribution. A year ago, the proportion of women per 1,000 persons in recorded employment was 234. When the ratio was at its maximum, at October 1, 1944, the reported number of women in the eight industries constituted 261 per 1,000 workers of both sexes, and in the nine major industrial divisions, 271 per 1,000.

There was important expansion at June 1 as compared with a month earlier in employment for men in manufacturing, mining, transportation and construction, with smaller increases in many other divisions. Among women, recorded employment slightly decreased in manufacturing, mainly in the textile division. On the other hand, greater activity among female employees was indicated in communications, hotels and restaurants, trade and certain other classes.

Operations of the National Employment Service

A CONTINUAL tightening in the labour market has characterized the employment scene during the spring and early summer of 1947. Unplaced applicants have shown a consistent decline from the February peak of 196,000 to the all-time low of 100,000 at the end of July. Peak seasonal requirements of agriculture, food processing industries, and construction were to be faced within the next two months, consequently it was feared that serious labour shortages would probably develop by early fall.

During June available labour supply was taxed severely to meet current manpower needs. Forty-five per cent of all applicants available during June were referred to a specific job order. In contrast, this percentage had fallen as low as 25 during the winter months. Selection officers, by currently encouraging employers to accept the physically handicapped and older worker, have maintained placements at a relatively constant level despite the fact that fewer persons were reporting for work.

Agriculture

With weather conditions greatly improved during June, labour requirements showed a sharp monthly gain. However, the lateness of the season tended to graduate demand over a longer period, thus requirements were more easily met by employment offices. Weekly reporting of vacancies jumped from about 900 to 1,020 during June. This was correspondingly reflected in a rise in placements from 480 to 660.

In general, securing of seasonal help did not present the most formidable aspect of the farm labour scene. The greatest difficulty

continued to be the problem of getting sufficient year-round help. The arrival of the Dutch immigrants and additional Polish veterans was beginning to ease the situation, but despite this, the agricultural labour force continued to lag well behind the pre-war level.

Movement of Prairie workers to British Columbia during the berry picking season was nearing completion. By the end of June some 850 persons had been transferred. The Eastern trek of Prairie help to Ontario farms was underway but recruits were difficult to obtain. Reports from Prairie offices indicated that

alternative offers of "between-season" employment in construction were attracting many workers because of the higher wage scales. At the latest available date (July 20) about 950

workers had been transferred under this excursion. The gap left was filled by Quebec farmers, about 100 of whom had already been moved to Ontario farms.

Non-Agricultural Industry

Vacancies Notified

By June, the steady upswing in seasonal expansion had levelled off. Thus, for the first time since January vacancies notified showed a net decline. Fewer vacancies were reported in all main industry groups with the exception of mining.

In the main, the contra-seasonal downtrend was indicative of the existent full employment situation. That is, by the end of May, in general, all the physically fit had been absorbed into gainful employment. Therefore, employers, in view of the tight labour market conditions, postponed the placing of orders indefinitely.

Average weekly vacancies in June numbered 29,796 in contrast to 34,017 and 37,694 one month and one year ago respectively. The decline during June was heaviest in the central provinces and British Columbia while seasonal requirements sustained demand in the Maritime and Prairie provinces. By sex distribution, male requirements fell much more sharply than those for women. The contraction in vacancies over the year was not significantly concentrated in any province but largely reflected an over-all reduction in employment activity throughout the country.

Mining.—Labour shortages in the mining industry showed some easement during June as student labour from high schools and universities and transferred help obtained through intensive clearance activity were placed into mining work. The chief bottleneck, lack of housing accommodation, was being overcome

in some areas as work on company housing projects was renewed. As living accommodation becomes more abundant in mining areas, several thousand employment opportunities are expected to be opened up.

Some strengthening of demand for coal miners was experienced with the settlement of the coal strike in Nova Scotia but as full production had not yet been resumed, requirements were small. In the Prairie coal fields, production was slowing down because of the vacation period. Demand for nickel miners was nearing the 600 mark and orders were in clearance throughout the Dominion. In the base metal industry, qualified machine runners and muckers were in constant demand.

Vacancies during June jumped by 35 per cent, totalling an average of 928 per week during the month. At the end of June 3,208 remained unsatisfied.

Manufacturing.—Heavy industry continued its call for a husky type of worker and requirements were gradually being met with the arrival of transferees from Nova Scotia. As a partial result, demand for workers in machinery production dropped by more than 1,000 during June. In general, however, the rate of absorption continued well below capacity especially in such industries as foundries, tanneries and rubber plants.

Labour shortages continued to characterize the textile industry although lay-offs of some magnitude had taken place in the ladies ready-to-wear factories in Quebec. In Ontario, stringent shortages of textile workers showed

little signs of relaxing; thus employment offices were encouraging employers to make as extensive use of home workers as possible.

Sawmill activity was nearing peak production and, in general, labour needs were met with little difficulty.

Food processing plants were preparing for an active season and labour shortages were already developing. Orders for fish cutters for the Nova Scotia plants were being cleared as far as the western coast of British Columbia.

As usual, much of the labour for fruit and vegetable canning was obtained by absorption of students.

The persistent need for unskilled factory hands currently received some relief as a considerable number of first jobbers were placed in this type of employment.

An average of 8,504 vacancies was notified in manufacturing per week in June. At July 3, the number remaining on file was 29,377.

Construction.—Labour requirements in the construction industry were at approximately the 1946 level. This level, although serious, was not so critical as was predicted earlier in the season. The greatest scarcity continued to be in the trowel trades although construction labourers, especially in Ontario, were in short supply.

Rising building costs cut into the construction boom. Activity was becoming more and more concentrated in institutional and industrial building while, at the same time, withdrawing from the residential field.

Material shortages continued to handicap activity but to a much smaller degree than was felt last year. Nails, cement, sewer pipe, plaster, and electrical equipment were the main scarce commodities.

Employment on highway construction increased rapidly although held back somewhat by unseasonable weather. Similarly, construction of public utility projects provided jobs for large numbers of skilled and unskilled workers.

Vacancies notified declined slightly during June to average 5,004 per week over the period. However, the much reduced labour supply kept demand high in relation to the number of applicants available. During the period, labour surpluses in the carpentry and painting trades developed into labour shortages. By July 3 there were approximately 11,000 jobs unfilled—5,000 requiring skilled or semi-skilled tradesmen while the remaining 6,000 were for construction labourers. At the same time, there were 7,000 applicants on file, skilled and unskilled accounting for 3,000 and 4,000 respectively.

Transportation.—Recruiting of extra gang labourers and section men for maintenance was becoming increasingly difficult due to the low wages offered in comparison with the pay received for alternative types of heavy work.

The Lakehead ports and Montreal reported a high level of shipping but sufficient labour had been available to meet most of the needs reported to employment offices. Shipments were slack at the year-round ports of Saint John and Halifax, with the normal seasonal decline currently being accentuated by slackening of United States coal shipments.

Demand for truck drivers was stepping up, but most orders required drivers for heavy trucks or highway construction gangs while the available supply was largely comprised of inexperienced light truck drivers.

There were 1,596 vacancies notified in transportation per week during June and at the end of the period 3,172 had not yet been filled.

Trade.—Retail and wholesale business had been maintained at a relatively constant level

over the last few months. The effect of consumers' resistance to higher price level was hidden in part by the additional activity arising out of the tourist traffic. The accumulation of inventories was increasing and had resulted in a substantial number of summer sales in certain lines of merchandise.

The post-war period had witnessed a marked tightening of employers' hiring specifications. Openings for the inexperienced worker were relatively few while orders usually specified that definite educational, age, experience, and appearance qualifications were required. However, merchants were willing to accept untrained help for temporary work, consequently many students were absorbed as replacements while the regular staff was on vacation.

Vacancies in trade numbered 3,565 per week during June. At the end of the month, 9,353 continued unsatisfied.

Service.—The beginning of a record tourist season was taxing the supply of service workers to the limit. In particular, the existing shortage of auto body and repairmen at garages and service stations was reaching serious proportions. Hotels and restaurants in cities and towns were experiencing considerable difficulty in retaining their staffs. Also, tourist trade was indirectly affecting employment in laundries, institutions and homes as labour turnover steadily mounted due to the attraction of work in summer resorts and country hotels.

The labour situation in hospitals showed some alleviation due to the temporary employment of high school students as summer Ward Aides.

Domestic service continued to offer jobs for hundreds of workers but interested applicants were almost non-existent.

Vacancies in the service industry (other than public and professional) numbered 6,031 per week in June. At the end of the month 20,008 remained on file.

Applicants Registering

By the latter part of May, the available labour supply had fallen below the lowest point recorded in 1946 and the day-by-day registration of workers was rapidly falling off. From a greatly depleted labour pool, employment offices therefore, had to meet the needs of industry which would be steadily gaining momentum for at least the next three months.

Some relief was received in June by the absorption of first jobbers. Employment was secured in factories, business offices, banks and telephone companies. Also, employers made use of student labour on a temporary basis where permanent help was not otherwise obtainable.

In addition, workers were obtained in substantial numbers from the reserve of unemployed labour in Nova Scotia.

With the exception of the potential supply of student labour and workers in chronic unemployment areas, fully employable labour had been almost completely absorbed by the early part of June. Referral activity, therefore, was becoming more selective, placement officers having to encourage employers to accept the untrained, the physically handicapped, and the older worker.

During June weekly registration of applicants averaged 29,921 as against 28,804 and 38,205 one month and one year before respectively. By the end of June, the number on file had fallen to 114,528. Of these, 25 per cent were registered for skilled or semi-skilled work while 35 per cent were seeking unskilled jobs (see Table III).

Referrals

Matching of workers and jobs became more selective during June. Jobs reported were fewer and less diversified while at the same time, available supply was rapidly being scaled down to the minimum. The normal influx of first jobbers, however, was stimulating referral activity by the end of the month, which offset to a large extent the down-trend evident previously. During June, referrals dropped by four per cent to average 25,081 per week over the period. The decline was common to all main industry groups with the exception of trade, finance, and insurance.

During June, there was a spectacular rise in the proportion of applicants referred to jobs. Referral of available applicants (those on file at the beginning together with those registered during the month) rose to 45 per 100 referrals in contrast to 38 and 32 during May and April respectively. At the same time, more referrals were made in relation to jobs. Referrals per 100 jobs available rose from 46 to 50 during the month.

Placements

Placement activity was maintained at almost a constant level despite the falling off in vacancies and steadily reduced labour supply. Clearance of orders, absorption of the older

worker, placement of first jobbers and student labour, and the selective referral of the physically handicapped enabled employment officers to make the most profitable use of the existing supply of labour. Also, the upward revision in wage rates was attracting more workers into the labour market.

The industrial distribution of placements during June was relatively unchanged from the previous period. Trade and construction edged slightly upward, thus counteracting slow-downs in logging, service, transportation and manufacturing placement work. The percentage distribution by provincial breakdown, which indicated only minor changes over the month, was as follows during June: Maritimes (6); Quebec (21); Ontario (40); Prairie (19); British Columbia (14). The placing of women swung upwards in contrast to a slight down-trend in male placements. Average weekly placements totalled 15,304 during June as compared with 15,762 and 17,368 one month and one year before respectively.

A larger proportion of vacancies was filled through clearance of orders during June. Transfers rose from two to three per cent of total placements. The current increase reflected both the transfer of workers from the Cape Breton and New Glasgow areas and the seasonal movement of workers to construction projects and mines.

One out of every eight placements effected during June was of less than seven days duration in length.

The following table gives a summary of casual and regular placements since the beginning of 1937:

Year	Placements		
	Regular	Casual	Totals
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,962	141,920	384,882
1940.....	320,090	155,016	475,106
1941.....	316,168	191,595	507,763
1942.....	809,983	85,638	895,621
1943.....	1,890,408	53,618	1,944,026
1944.....	1,693,119	46,798	1,739,917
1945.....	1,445,692	47,889	1,493,581
1946.....	785,593	73,819	859,412
1947 (26 weeks).....	335,606	48,951	384,457

Special Placements

During the May-June period, placement of the physically handicapped hit an all-time high for the year while the unplaced fell below all previous records. The existent full employment situation had forced many employers to accept the physically handi-

capped whom they would not have accepted had other labour been available. This attitude on the part of some employers tends to make special placements more vulnerable to seasonal influences than general placement activity.

At the same time, however, owing to a growing awareness of the need for rehabilitation of the impaired and the quality of the service they can render, the number of permanent placings are gradually gaining. From May 15 to June 14, special placement of the handicapped totalled 1,489, leaving 4,374 on file at the mid-June date.

Special placement officers were also active in securing suitable employment for first jobbers. School authorities were giving co-operation in providing background information

on the student's scholastic record. In general, the high school graduate was easily placed with openings especially abundant for commercial and business school graduates. Although demand for summer help had lessened from the wartime level many of the student labour force were able to get jobs during the holiday period.

Registrations in the Toronto Youth Employment Centre were reaching their peak during June. The unplaced rose from 661 at the end of May to 2,828 one month later.

Executive and Professional Offices

Placement activity during the first half of the year was well above that reported in the comparable period in 1946. This was in sharp contrast to a consistent decline experienced in the general field. More extensive channelling of labour market operations through the specialized E and P offices accounted largely for the uptrend. More employers were reporting vacancies and more applicants were seeking work than previously. It also reflected, to some extent, the greater number of opportunities presently available because of completion of reconversion and the improved flow of materials.

The immediate problem facing E and P offices was that of meeting a steadily increasing demand from a limited supply of workers.

Employers were being encouraged to compromise their demand for fully qualified young workers and to accept either the qualified but older worker or the young and inexperienced person.

By the middle of June, the absorption of university graduates into permanent employment and of undergraduates into summer work, was virtually complete.

Despite the fact that the registration of workers dropped substantially during June, placements remained at a constant level. Average weekly registrations totalled 284 during the period, with placements continuing at 69 per week. At the end of the month, 1,727 jobs were on file while unplaced applicants numbered 2,174.

Veterans

Applications.—Applications fell substantially during June, especially among the young World War II veterans. This decline reflected the gradual dropping off from the heavy registration of veteran students occurring in May. On the other hand, more World War I veterans filed orders for work, many probably endeavouring to benefit from the extensive campaigns launched on behalf of the older veteran. Applications averaged 7,087 per week in June as against 7,430 one month before.

Placements.—Problems encountered in the placing of veterans were similar to those experienced in the general field. In particular, emphasis was stressed on the successful absorption of the older worker and the physically handicapped. During June, placements of ex-servicemen averaged 3,993 per week.

Placement of World War I veterans, although slightly below the all-time high reached in May, continued at over 500 per week in June.

In the physically handicapped field, veteran placements reached the peak to date. From May 15 to June 14, there were 840 placed in

comparison to 692 and 576 one month and one year before respectively.

Unplaced Applicants.—By June 26, the number of unplaced ex-servicemen had been scaled down to less than 30,000—that is, less than three per cent of the total number discharged were out of work. The number on file consisted largely of those registered in chronic unemployment areas, the seriously handicapped, unemployables, and those temporarily changing jobs.

At the June date, there were 29,608 unplaced. Of these, 72 per cent had been seeking work for more than two weeks in comparison to 73 per cent and 77 per cent during May and April.

The transfer of veterans out of the Cape Breton area was reflected in a drop in the unplaced registered for more than two weeks in the Halifax area. Whereas at May 29 there were 6,080 unplaced, four weeks later 4,776 remained on file. Seasonal influences reduced the "15 day or more" unplaced in Vancouver from 3,205 to 2,639, and in Winnipeg from 2,749 to 1,706.

Regional Analysis

The following regional analysis is based on reports received from National Employment Service offices throughout the country. The report covers the month of June, 1947.

Maritime Region

Seasonal requirements for workers were being met with little difficulty. Approximately 2,000 men and women were transferred from the labour surplus areas of Cape Breton and New Glasgow to Ontario under the Nova Scotia movement order.

Agriculture.—The warm weather during the last two weeks of June had brought crops along rapidly and it was expected that much of the lag in seeding would be overcome. The outlook for the hay crop was bright.

The peat moss industry in the Bathurst area was at its peak, with 500 employed as compared with 20 during the winter months. The opening up of a new peat moss area in the Chatham district was under consideration.

A steady demand for experienced and inexperienced farm workers, including farm couples, existed in all three provinces.

Logging.—Due to the wet spring, mosquitoes and blackflies were unusually bad this year. This condition led to an unusually heavy labour turnover. Pulp cutting was in full swing with a very heavy demand for woodsmen reported in New Brunswick—over 1,100 vacancies were shown and only 53 applicants registered at local offices.

The increase in the softwood lumber quota for shipment to the United States market will have a stimulating effect on this industry.

Fishing.—Fishermen were having considerable difficulty in disposing of their catches after the collapse of the United States market. However, the recent decision of the Federal Government to spend eight million dollars on fish for export to Europe will bolster the industry considerably.

Herring processing was getting underway—25 men will be employed in the Liverpool plant and 20 boats will supply the fish. It was expected that this work would continue for three months.

Mining.—The mines had not reverted to full production immediately after the settlement of the coal strike as some operators reported a lack of orders. About 500 older employees had been pensioned off in Cape Breton and Springhill fields.

Manufacturing.—No mass lay-off from the Saint John fertilizer plants was being planned this summer as both were undertaking repairs.

The usual summer exit of workers from this type of work to outdoor jobs will regulate the situation.

Plans are underway for the building of a new chemical fertilizer plant at Hillsboro, N.B., the actual construction to begin in the spring of 1948. The plant will employ more than a hundred men. It was hoped that the deposits of phosphate rock reported in the Saguenay district of Quebec would be suitable to mix with the calcium sulphate of Hillsboro which would save importing it from the southern United States.

The Halifax Shipyards received a contract to build three ships for the Argentine Government at a cost of \$7,000,000. Actual work will not begin until early in 1948. It will insure steady employment for all types of shipyard workers for a period of 2 to 3 years. Workers were assured of steady work at the Liverpool docks for 6 to 9 months on repair orders. The wooden shipbuilding industry was experiencing a boom in the building of yachts, druggers and fishing boats.

Construction.—Generally, building was moving ahead steadily although hampered by increased costs and scarcity of material. The former difficulty had caused postponement of a number of commercial projects in the hope that there will be a levelling off before next spring. Wartime houses were under construction in Woodstock, Campbellton, Moncton and Halifax.

Unskilled labour was plentiful but skilled workers, especially bricklayers, plasterers and first class carpenters, were in short supply.

In the Glace Bay area, a shortage of cement and sewer pipe was holding up progress. Once this was overcome the number of workers employed was expected to increase.

In New Brunswick the large-scale grading, paving and bridge building operations were practically at a standstill during the first two weeks of June but good weather during the rest of the month speeded up the work.

The Provincial Highway Department in Nova Scotia announced that tenders will be called for the construction of a causeway between Cape Sable Island and Barrington Passage, Shelburne County, which will supplant the present ferry service. It was estimated that the work will take from one to two years and will absorb a considerable number of unemployed workers in the Yarmouth-Shelburne area.

The construction of a new Immigration Shed had been authorized for Saint John at an estimated cost of \$1,050,000—work was to begin in September.

Transportation.—Rail traffic has dropped off both in freight and passenger service, also, there was relatively little activity at the ports of Halifax and Saint John.

Bus service reported a busy season with the increased tourist traffic and accommodation

at summer hotels and tourist cabins was in great demand.

In Halifax preliminary work was underway for the installation of equipment for a new trolley bus system. Removal of existing rail lines and steel repair will require a large number of labourers.

REGIONAL EMPLOYMENT TRENDS

SEASONALLY ADJUSTED

FROM 1939 TO 1947

(AVERAGE - 1939 = 100)

N.B. A note on the method used to adjust for seasonality appeared on page 1054 of the July issue of the LABOUR GAZETTE.

Quebec Region

A marked improvement was noticed in farm crops after two weeks of fine weather and it was expected that the harvest would be average. Prospecting was active in all mining regions although somewhat hampered by the prevailing shortage of underground workers. Construction and transportation were operating at a high level.

Agriculture.—After a five-week delay in seeding due to an excess of water on the land, there was promise of a good hay crop and a fair amount of grain. Pasture in most areas was good.

Each consignment of Polish War Veterans was being welcomed by Quebec farmers and readily placed. Employment offices had recently located 147 of them and were working on the placement of the latest group of 105.

Lumbering.—Woods operations in most sections of the province were small owing to high water and wet working conditions. However, with drives well on the way, camps were expected to open in July. High water in the driving rivers necessitated a larger crew than usual. The collecting of logs left high on the river banks by receding waters was expected to be a long and expensive operation.

Mining.—Exploration work was active in new mining fields such as Labrador, Bachelor Lake and Mistassini while established mines such as the Consolidated Central Cadillac Mines Ltd., and Consolidated Beattie Mines Limited, were pushing production ahead. The East Malartic Mines Ltd. had resumed operations after their recent fire disaster.

In order to relieve the housing situation which was one of the great deterrent factors in attracting workers, mines in the Val d'Or district were sponsoring the erection of a new townsite where miners will be given assistance in building their own homes.

Throughout Western Quebec the labour situation was acute—especially for underground work. This also restricts the number of beginners that could be trained to fill the gap. It was feared that if this condition persists mining production in the district would be dangerously curtailed.

The asbestos workings at Asbestos were progressing rapidly although the high cost of living and bunkhouse facilities were causing considerable turnover among men transferred from other areas.

Manufacturing.—Practically all saw mills in the region were in full swing and at that time had an adequate supply of help. It

was expected that self operators would finish production in early July while larger mills would operate until October.

The majority of companies manufacturing steel and machinery continued busy. Their demands for skilled machinists and tool-makers were difficult to fill as they were becoming more exacting in their requirements and would give little consideration to machine operators trained in war plants.

The Aluminum Co. of Canada placed an urgent order for 205 potmen for their Arvida plant. The high physical requirements had restricted the number of eligible applicants.

The demand for workers in textile mills continued high with little hope for relief. However, orders were falling off at the end of the month as many mills were starting holidays. One mill had opened a small branch factory in a neighbouring town and was employing local girls, in an effort to overcome the housing and labour shortages.

Imperial Tobacco Co. opened a new cigar leaf processing plant and warehouse. This will be a great asset to the growers of the Joliette area as well as giving employment to approximately 150 persons.

The freer flow of materials increased production of aircraft, trucks, and passenger and freight cars. Former employees were being rehired to carry out work on the many orders.

The strike at two Lachute plants had been terminated and most of the employees were back at work. Some 500 workers were still out at St. Jean with no settlement in view.

All shipyards continued busy on new and repair work although hindered by an acute shortage of sheet metal workers, boilermakers and pipe-fitters.

Construction.—The general recession in residential building was off-set by the placement of new contracts for commercial and institutional building. Many large projects such as the \$1,000,000 Bell Telephone Co. offices in Quebec City, the \$3,000,000 power development at Lake Dozois, and the \$1,000,000 college at Roberval, were underway while the \$4,000,000 chlorine plant at Beauharnois was scheduled to begin construction in August.

Transportation.—Railroads continued to operate at close to peak capacity and track maintenance work was being carried on at many points.

The waterfront at Montreal was crowded with vessels busily loading and unloading cargoes. So far, no trouble was encountered in registering unlicensed personnel. However, certificated officers for deep sea ships were in short supply.

Travel by bus was heavy and as soon as new equipment was received new routes were being opened.

Ontario Region

June was a month of industrial expansion and increased job opportunities against a background of labour shortages. The arrival of workers from the Maritimes, students, and the transfer of workers within the region eased the situation considerably. Farmers were placing orders for Polish veterans and were pressing for further immigration in order to meet their needs.

Agriculture.—The good weather during the last three weeks of June enabled farmers to seed their hoe crops. Prospects for hay and fall wheat were good in most areas. This factor had created an unusually strong demand for Western harvesters, movement of which started on June 27. While the number volunteering for transfer was small, it was expected that the situation would improve as time went on.

Early in the month 503 Polish veterans were placed on farms and, during the last two days of June, another 169 were distributed to the various areas. These men were readily absorbed.

A large group of students and teachers had been directed to summer work on farms.

Logging.—River drives were progressing favourably although sweeping operations were slowing up the work. In some areas summer students were being used to expedite operations.

Pulp cutters were still in demand in Northern Ontario, vacancies listed reaching the 2,000 mark. Hot weather and the "fly season" will make it difficult not only to refer men to the woods, but also to keep down turnover.

Mining.—A general improvement in labour conditions contributed to a marked increase in the production of gold mines. However, the continued scarcity of experienced miners and others willing to work as mine beginners, coupled by the limited housing facilities in camps, continued to be a real drawback to further increases in production and mine expansion.

Production in base metals was also on the increase and the two main operators have gone to some length to induce workers to take employment with them. Operators at Sudbury have orders in clearance covering an area from the eastern boundary of Alberta to the Atlantic coast and were advancing fares to men willing to go to Sudbury. After

three-months continuous service, the fares would be refunded to the employee.

No labour shortages were reported at non-metallic mines or oil well workings.

Manufacturing.—Saw mills, with the exception of two located in the bush, were working at near capacity, milling a record cut of lumber. Pulp mills were receiving an adequate flow of workers due to the high wages being offered.

Suitable labour for heavy manufacturing industries was becoming increasingly difficult to obtain and employees were urging that steps be taken to accelerate immigration. Already representatives had been sent to Europe to locate the type of men required. The movement of some 2,000 Nova Scotian workers as well as students who were working during the summer, has gone far to overcome the shortage.

A scarcity of raw materials, especially steel, coupled with coal shortages resulting from the recent work stoppage in the United States coal mines, had resulted in the closing of some plants in the Windsor area. The deterrent effect was most apparent in the manufacture of machinery and heavy producer goods.

Foundries continued to require fully qualified machinists, polishers and buffers.

Cabinet makers and skilled wood workers were in great demand with few available applicants in sight. This situation was expected to become more acute in the fall.

Reports indicated a slowing up in the shoe and small leather goods industry due to over-production. On the other hand, the textile industry presented an increasing demand for workers although labour needs had been temporarily relieved by students. Some needle trades in Chatham had placed sewing machines in homes for part-time work which had met with marked success.

The rubber tire industry, which required a rugged type of worker, was being hampered by labour scarcity, and plants in Kitchener were transporting workers daily from Stratford to relieve the strain.

Food processors were at peak production within the limits of labour supply, available workers being far below the number required. Export trade was taxing the output of butter factories and egg grading plants.

Packing houses in Toronto were apparently adequately staffed but were anticipating a shortage of workers in the fall.

Milk canning plants were busy following the removal of this item from rationing. Summer help was relieving the pressure.

Tobacco processors required help as they approached their busiest season.

Construction.—The peak appeared to have been reached, particularly in industrial and institutional building. There was, however, a continued need for both materials and workers.

Highway construction and the building of the new power plant at Des Joachaim were being pushed forward and both skilled and unskilled workers were in demand.

Transportation.—On the whole, lake shipping was moving ahead with little difficulty. However, requests for certificated men and a few men for replacements as general shiphands, were on file.

Although there was a surplus of taxi, truck and tractor drivers, orders on file were difficult to fill because of the strict requirements.

A steady demand prevailed for railway track maintenance men. Summer students had given some assistance in filling this type of vacancy.

Prairie Region

The heavy demand for workers in agriculture, mining and logging, was being met by an adequate supply of workers in most areas. The arrival of two groups of Polish veterans eased the farm labour shortage.

A number of industries had closed for a two-week holiday period. The problem of housing still deterred the transfer of labour.

Agriculture.—Although June was a month of cold, wet weather, crops were good except in small areas which suffered from flooding. In Manitoba the demand for farm workers was being filled. Thinning operations started in the sugar beet industry at the end of the month.

In Saskatchewan, with the exception of Prince Albert and North Battleford areas, the crops were good although about three weeks late. In the two areas mentioned, farm conditions were poor with indications of low average yield. The Polish veterans who were dispatched to this province had bolstered the existing supply of farm workers.

Alberta reported a good crop, although it was expected to be later than usual. The demand for farm labour was light. As in previous years, plans had been made for the transference of workers during the slack season to Ontario for haying and early harvest. This year the results were disappointing due to the fact that within their own Region there was keen competition for between-season farm labour for construction and railway maintenance work.

It was early to estimate harvest needs but it was apparent that additional help would be required from outside the Region.

Approximately 850 women were transferred from Saskatchewan and Alberta to the fruit districts of British Columbia.

Logging.—The demand for pulpwood cutters continued high throughout the Lakehead area and was being met locally. Heavy rains had expedited river drives except in a few districts where slight damage and delays were caused through flooding. Winnipeg area offices reported a shortage of cutters with little prospects of filling the need. The Crowsnest area reports showed that logs, props and planking were accumulating satisfactorily although more loggers and prop cutters could be used. Elsewhere in Alberta, activity was light.

Mining.—Base metal mining was showing a substantial increase in production over last year. Steep Rock Iron Mines Ltd. continued to place orders for husky mine labourers as well as a few skilled tradesmen. They had started a housing program in the hope of reducing labour turnover. At Flin Flon, the Hudson's Bay Mining and Smelting Co. had hired a number of local students as junior gang labourers.

Precious metal mining presented a picture of acute labour shortages and high labour turnover in all areas. The lack of experienced

muckers and miners was forcing many operators to curtail expansion or accept inexperienced help.

A number of coal mines were closed as employees were taking holidays or as plants undertook repair work. There was still a demand for certificated miners in Alberta.

The coke ovens at Coleman were running full blast and at Blairmore a new briquette plant had been constructed.

Manufacturing.—A severe shortage of glass had materialized and was proving a hindrance to the construction industry. However, there was promise of a substantial shipment in the near future. Brickyards at the various centres were working at capacity to supply construction needs.

Iron foundries in Calgary and sheet metal plants in Saskatoon reported an improvement in the shipment of material but a definite shortage of experienced moulders, core makers and structural iron workers. The tantalum manufacturing plant at Edmonton had been closed for two months.

At Fort William, the Canada Car & Foundry Co. has signed a \$2,000,000 contract with the South African Government for the manufacture of one hundred and fourteen new buses.

The construction of barges at the Port Arthur Shipbuilding Co. has been slowed down by the shortage of steel and the lack of pattern makers and foundrymen.

Activity in the meat packing industry was at low ebb. Cattle receipts were expected to increase but hog deliveries were likely to continue to fall off for some time. Processors of dairy products reported increased activity. There was some indication that July may be the peak production month for butter rather than June due to the lateness of the season. Canneries at Brooks were preparing to open about July 15, with prospects of a six to eight week run. It was expected that sufficient local labour would be available.

A slight upswing was noted in the amount of grain being handled at the Lakehead and several employers had placed orders for additional help. Flour mills were also taking on extra workers, but employment was generally steady with little turnover.

Saw and planer mills were operating at capacity, many working 24 hours a day, in an effort to supply the tremendous demand for lumber. Experienced help was difficult to find but labour turnover was low. Much of the help received was through clearance. The threatened dispute at Kenora and Fort Frances pulp and paper mills had been ironed out and work was progressing under a new contract giving certain wage increases.

Construction.—While the home building program was less than that of 1946, the situation in respect to shortages of all kinds of tradesmen was similar. It was expected that the need for skilled workmen would continue to be acute in most areas. The fact that contractors were not making any provision for board or room eliminated the possibility of getting any great number of workers from other areas. In a few centres such as Edmonton, the real hindrance to construction was a short supply of building materials.

Industrial building was being carried forward with no indication of any serious labour scarcity at that time although it was expected

that later in the season shortages would arise. The turnover of labour in urban areas was quite normal, but the number who, after short working periods left projects in rural and remote areas, was causing concern. Some shortage of materials, especially nails and cement, was being reported.

The program of public works was not extensive being confined mostly to repairs while public utilities undertaken included large paving projects, street transportation installations and the laying of sewer and water pipes. These were giving employment to many unskilled workers.

Highway building and maintenance had been delayed because of excessive rainfall.

Transportation.—Orders for section men and extra gang labourers were listed at many centres but were not being filled due to the relatively low rate of pay offered by the railway companies.

The Pas reported that air and water transportation in the northern part of the region had been resumed. Some freight shipments of wheat had been moved to Churchill but the heavy haul had not yet started.

Pacific Region

The general outlook was bright and employment was available at all points in the region. The construction industry was setting the pace

towards maximum employment and it was estimated that the logging industry would soon increase its tempo when current negotiations were completed.

Agriculture.—An abundance of workers was available to harvest the Fraser Valley strawberry crop. Poor weather conditions, however, caused the tonnage to drop far below the expected yield. The raspberry season was approaching its peak and fair weather was rapidly bringing the fruit to maturity. A total of 865 women and girls was received on inter-regional clearance orders from the Prairie Region for the harvesting of these crops. On Vancouver Island a large number

of students and casual workers were filling the demand for fruit pickers.

It was expected that sufficient labour for haying could be supplied but that an additional 150 workers would be needed for the threshing of peas. Permanent general farm and dairy hands were difficult to secure in the face of the high wages being paid by other industries.

Okanagan area reports showed an influx of transient labour for orchard operations despite the fact that transportation costs were not being provided.

Logging.—There was a substantial decrease in the number of orders for skilled loggers in June due to uncertainty in the industry during the period of wage negotiations. In the Prince George area some camps were working at only 50 per cent of capacity. Little relief could be expected until negotiations were completed.

Mining.—In the coal mining areas of the Northern Interior, Nanaimo, and Courtenay, the demand for miners was not heavy. However, Princeton reported a critical shortage of miners and labourers. Indifferent housing accommodation practically eliminated the possibility of meeting their current needs through clearance.

Gold placer mine operators in the Yukon, and British Columbia, were having no trouble securing help while the quartz section of the industry registered serious shortages and a high labour turnover.

The Consolidated Mining and Smelting Co. at Trail had sent representatives to Vancouver, New Westminster and Victoria seeking approximately 300 workers. Wages were good and a limited accommodation for married and single workers, resulted in a fair proportion of their immediate needs being met.

It was feared that the general mining industry would suffer a slight set-back when the number of university students now employed return to school.

Manufacturing.—Yarrows shipyards at Victoria were still seeking various types of skilled tradesmen, particularly steel shipwrights and platers. The situation was eased somewhat by the lay-off at the Victoria Machinery Depot. Similarly, as the Pacific Dry Dock released their employees, they were hired at Burrard North Dry Dock. Ship construction, however, continued to be handicapped by material shortages.

The wooden shipyards in the Region were very active. A new building venture started

at Nelson hoped to develop both a local and export market for their crafts.

In the Mainland area, sawmill activities were increasing with some plants taking on additional staff and operating extra shifts. New Westminster and Northern Interior mills were experiencing unrest while awaiting the decision to be brought down by the current negotiating committee on wages. Once negotiations were completed it was expected that the present shortage of workers would become critical.

Construction.—The demand for all types of construction workers continued to be heavy with out-of-town requirements predominating. While large industrial projects did not seem to be faced with either material or labour shortages, small contractors were having considerable difficulty in securing both.

Prince George reported that a one hundred house project was under construction which upon completion would ease the critical housing situation considerably.

Application had been made for a forest management licence on behalf of the Edward Cellulose Co., a subsidiary of the American Corp. If granted, operations would extend from the Skeena River towards Terrace and the Alaska boundary and would give employment to approximately 700 in the construction stage and possibly 1,000 permanent employees.

Victoria reported that many large contracts had been let, one item being a \$4,000,000 school construction program which was to be spread over a five-year period. The Elk Falls power project on the Northern end of Vancouver Island was expected to be completed by October.

Field engineers were surveying the Canol pipe line from Whitehorse to Fort Norman with a view to salvaging the pipe line and pumping stations. This operation would require about 300 men, mostly truck and tractor drivers, heavy equipment operators and labourers. Work was expected to start in September.

Highway contractors throughout the Region had been successful in securing the type and number of skills required and no critical shortage had been registered.

Transportation.—Deep sea traffic into the major harbours is at the lowest point in years and personnel requirements were at a very low ebb. Coastal operators had placed an urgent request for diesel engineers and cooks, both of which were in very short supply at that time.

Unemployment in Trade Unions at the Close of the Quarter Ending June 30, 1947

UNEMPLOYMENT among trade union members in Canada decreased to 0.8 per cent at the end of June from 1.8 at the end of March and 1.3 at the end of the second quarter a year ago. At the end of June reports were received from 2,409 local unions with a combined membership of 468,269. In the previous quarter 2,387 locals with a total membership of 455,698 reported, while at June 30, 1946, reports were received from 2,326 locals with a total of 408,002 members.

In the following report unemployment refers only to involuntary idleness due to economic causes. Persons who are without work because of illness, a strike or a lockout, or who are engaged in work outside their own trade are not considered as unemployed. As returns from unions reporting vary from quarter to quarter with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that the figures refer only to organizations reporting. For the quarter under review, an increase in trade union unemployment was indicated in lumbering and logging, mining and communication. There was a substantial decrease in trade union unemployment in construction and transportation with more moderate declines indicated in manufacturing and services.

Table I contains the percentage of trade union unemployment at certain dates, in each province. In comparison with the previous quarter declines in the percentage were shown in all but New Brunswick where it rose from 1.7 to 2.2. A comparison with June, 1946, indicates that employment conditions were more favourable in the period under review in all the provinces with the exception of Nova Scotia where the percentage rose from 3.6 to 7.2.

A separate compilation is made each quarter of unemployment among union members in the largest city in each province with the exception of Prince Edward Island. A decrease in trade union unemployment from the previous quarter was reported in all cities but Saint John where the percentage rose from 2.8 to 6.5. The percentage declined in Halifax from 8.4 to 3.9, in Montreal, from 2.0 to 0.4, in Toronto from 1.2 to 0.3, in Winnipeg from 1.0 to 0.4, in Regina, from 0.3 to nil, in Edmonton, from 3.3 to 0.7 and in Vancouver from 3.1 to 0.9. In comparison with June, 1946, the percentage at the date under review was higher only in Halifax, unchanged in Montreal, and lower in Saint John, Toronto, Winnipeg, Regina, Edmonton and Vancouver.

Returns were tabulated from 931 locals in the manufacturing industries. These reported

PERCENTAGE OF UNEMPLOYMENT AS REPORTED
BY TRADE UNIONS

a combined membership of 238,550 of whom 2,655 or 1.1 were unemployed at June 30. At the end of the previous quarter 1.5 per cent of 231,300 members reported by 915 locals were without work. In June, 1946, 853 locals reported 1.6 of 185,865 members as unemployed. In comparison with the previous quarter (Table II), the employment situation was more favourable among trade union members engaged in the manufacture of animal products, non-ferrous metals, wood products and iron and its products. Increases in union unemployment were reported in vegetable products and pulp and paper products. A comparison with June, 1946, indicates slightly less favourable employment conditions in the manufacture of vegetable products, pulp and paper products and wood products. Improvement was indicated in the other manufacturing categories.

In the transportation group reports were received from 850 local union branches with a total membership of 102,790 of whom 568 or 0.6 per cent were without work on the reporting date. At the end of the previous quarter the percentage was 2.0 and at June 30, 1946, it was 1.5. The percentage of trade union unemployment in steam railway operations decreased to 0.6 per cent from 1.8 at March 31, 1947 and 1.6 in June a year ago.

Unemployment in the mining group increased to 1.0 per cent from 0.3 in the previous quarter. The percentage in coal mining increased to 0.8 from 0.2 in March and 0.6 in June last year. Unemployment among metallic ore miners increased slightly to 0.1 per cent from no reported unemployment in the previous quarter. Unions of non-metallic ore miners other than coal miners reported 4.7 of 2,152 members unemployed. The percentage for the previous quarter was 2.1 and at June 30, 1946, it was 2.8 per cent.

The Department received reports from 205 locals in the building and construction trades. These reported a combined membership of 42,679 of whom 0.4 per cent were reported as unemployed at the end of June. This percentage was substantially lower than the 5.0 per cent recorded in the previous quarter and 0.8 per cent at the end of June in 1946. Decreased employment was indicated for electrical workers. The employment situation was more favourable for bricklayers, masons and plasterers, carpenters and joiners, painters, decorators and paperhangers, plumbers and steamfitters, and hod carriers and miscellaneous building workers.

Unemployment among trade union members in public and personal services declined to 0.2 per cent at the date under review from 0.7

in the preceding quarter and 0.4 in June, 1946. The communications group showed an unemployment percentage of 1.3 at the reporting date as compared with 0.1 in the previous quarter and reflected an increase of unemployment, from 0.1 to 1.6 per cent, among union members in telegraph operations.

Unemployment in logging in Ontario and British Columbia rose to 1.0 per cent from no unemployment in the previous quarter. The information on unemployment of union members in the fishing industry is not sufficiently complete to be representative and is therefore not included as a group in Table II.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1933.....	16.0	13.0	25.2	24.4	20.3	17.2	21.7	20.8	22.3

DURING July, 1947, the number of strikes and lockouts in existence in Canada was only two less than the previous month but the number of workers involved and the time loss in man-working days decreased sharply, the time loss showing a decline of about 142,000 days. The strike figures this month are also substantially below those recorded for July, 1946, which was one of the peak

months of last year. Preliminary figures for July, 1947, show 29 strikes and lockouts in existence, involving 3,112 workers, with a time loss of 24,355 man-working days, as compared with 31 strikes in June, 1947, with 17,201 workers involved and a time loss of 166,370 days. In July, 1946, there were 47 strikes, involving 50,429 workers, with a time loss of 915,911 days.

* Preliminary figures.

† Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

For the first seven months of 1947 preliminary figures show a total of 125 strikes and lockouts, involving 47,068 workers, with a time loss of 1,526,290 man-working days. During the same period last year there were 160 strikes, with 122,237 workers involved and a time loss of 2,538,656 days.

Of the 29 strikes recorded for July, two were settled in favour of the workers, four in favour of the employers, three were compromise settlements and four were indefinite in result, work being resumed pending final settlement. At the end of the month 16 strikes were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., which commenced May 30, 1946, are still continuing. A strike of food products factory workers at Vancouver, B.C., has not been declared terminated.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1947⁽¹⁾

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars(2)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to July, 1947				
MANUFACTURING— <i>Vegetable Products—</i> Vegetable products factory workers, Port Credit, Ont.	1	70	350	Commenced May 1; for increased wages; terminated July 7; conciliation, provincial; compromise.
<i>Textiles, Clothing, etc.—</i> Textile factory workers, Lachute Mills, P.Q.	1	60	1,200	Commenced April 10; for a new agreement providing for increased wages, union shop, two weeks' vacations with pay, and pay for six statutory holidays; unterminated; partial return of workers.
Textile factory workers, St. Johns, P.Q.	3	500	5,000	Commenced June 4; for a union agreement providing for increased wages and other changes; terminated July 12; return of workers pending reference to arbitration; indefinite.
<i>Pulp, Paper and Paper Products—</i> Paper products factory workers, Chambly, P.Q.	2	150	3,000	Commenced April 15; for implementation of award of arbitration board providing for increased wages, two weeks' vacations with pay, check-off, pay for seven statutory holidays, etc.; unterminated; partial return of workers.
<i>Miscellaneous Wood Products—</i> Wood products factory workers, Lachute Mills, P.Q.	1	35	600	Commenced May 5; for a new agreement providing for increased wages, pay for statutory holidays, union security, etc.; unterminated; partial return of workers.
Furniture factory workers, Hanover, Ont.	3	400	4,000	Commenced June 6; for new agreements providing for increased wages, pay for nine statutory holidays, two weeks' vacations with pay, etc.; unterminated.
<i>Metal Products—</i> Metal factory workers, Ottawa, Ont.	1	75	1,500	Commenced February 24; for a new agreement providing for increased wages, vacations with pay, union security, etc.; unterminated; partial return of workers.
<i>Non-Metallic Minerals, Chemicals, etc.—</i> Fireclay products factory workers, Acton, Ont.	1	35	800	Commenced June 7; alleged violation of seniority in lay-off of nine workers; unterminated.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1947⁽¹⁾—*Continued*

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars ⁽²⁾

Strikes and Lockouts in Progress Prior to July, 1947—*Concluded*

TRANSPORTATION—				
<i>Other Local and Highway—</i>				
Truck drivers, Windsor, Ont.	1	8	32	Commenced May 31; for increased wages; lapsed by July 5; indefinite.
Bus drivers, Sydney, N.S.	1	44	200	Commenced June 27; against dismissal of eight drivers for allegedly collecting fares improperly; terminated July 5; concilia- tion, provincial, and return of workers pending reference to arbitration; in favour of employer; recommendation that one driver be reinstated.
SERVICE—				
<i>Business and Personal—</i>				
Laundry workers, Nanaimo, B.C.	1	28	500	Commenced June 9; against dismissal of two workers for being absent without leave; unterminated.

Strikes and Lockouts Commencing During July, 1947

MINING—				
Coal miners, Nanaimo, B.C.	3	360	360	Commenced July 2; in sympathy with strike of laundry workers at Nanaimo, B.C., commencing June 9, 1947; terminated July 2; return of workers; in favour of employers.
MANUFACTURING				
<i>Animal Foods—</i>				
Dairy and poultry plant workers, Melville, Sask.	1	95	1,300	Commenced July 16; for extension of existing agreement to October 30, 1947, with pro- vision for increased wages and reduced hours; unterminated.
<i>Fur and Leather Products—</i>				
Tannery workers, Oshawa, Ont.	1	270	540	Commenced July 30; for increased wages; unterminated.
<i>Textiles, Clothing, etc.—</i>				
Woollen mill workers, Brandon, Man.	1	22	33	Commenced July 11; for a union agreement providing for increased wages and other changes; terminated July 15; return of workers pending settlement; indefinite.
<i>Miscellaneous Wood Products—</i>				
Sawmill workers, Nanaimo, B.C.	3	150	150	Commenced July 2; in sympathy with strike of laundry workers at Nanaimo, B.C., commencing June 9, 1947; terminated July 2; return of workers; in favour of employers.
Sawmill workers, Cache Bay, Ont.	1	168	1,700	Commenced July 5; for increased wages and continuation of certain bonuses; terminated July 17; conciliation, provincial; com- promise.
Sawmill workers, Wahnapiatae, Ont.	1	50	400	Commenced July 23; alleged discrimination in lay-off of workers; unterminated.
Box factory workers, Prince Albert, Sask.	1	70	375	Commenced July 25; protest against dis- missal of two workers; unterminated.
<i>Metal Products—</i>				
Steel products factory workers, Oshawa, Ont.	1	84	900	Commenced July 16; for increased wages; unterminated.
Metal factory workers, Montreal, P.Q.	2	40	40	Commenced July 31; alleged discrimination in dismissal of six workers; unterminated.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1947⁽¹⁾ *Concluded*

Industry, Occupation and Locality	Number Involved		Time Loss in Man- Working Days	Particulars ⁽²⁾
	Establish- ments	Workers		
Strikes and Lockouts Commencing During July, 1947—Concluded				
MANUFACTURING— <i>Conc.</i> Non-Metallic Minerals, Chemicals, etc.— Clay products factory workers, Medicine Hat, Alta.	2	155	250	Commenced July 7; for new agreements providing for increased wages, reduced hours, union shop, etc.; terminated July 8; conciliation, provincial, and return of workers pending reference to arbitration; indefinite.
Chemical factory workers, Medicine Hat, Alta.	1	15	75	Commenced July 17; against dismissal of union officer because of misunderstanding during negotiations for a union agreement; terminated July 22; conciliation, provincial; in favour of workers.
CONSTRUCTION— Buildings and Structures— Labourers, Port Union, Ont.	1	40	40	Commenced July 14; for two weeks' vacations with pay instead of one, and for transportation allowance on certain jobs; terminated July 14; negotiations; in favour of workers.
Carpenters, Cornwall, Ont.	1	17	200	Commenced July 17; re date of payment of agreed wage increase; untermiated.
SERVICE— Business and Personal— Hotel employees, Riverside, Ont.	1	11	200	Commenced July 4; alleged discrimination in dismissal of four workers, and for a union agreement providing for closed shop, check-off, etc.; terminated July 25; conciliation, provincial; compromise.
Waitresses, etc., Kelowna, B.C.	1	10	50	Commenced July 2; for a union agreement providing for increased wages, reduced hours, etc.; terminated July 8; replacement; in favour of employer.
Waiters and bartenders, Sudbury, Ont.	7	60	200	Commenced July 28; for a new agreement providing for closed shop and increased wages; untermiated.
Laundry and dry cleaning plant workers, Fort William and Port Arthur, Ont.	4	90	360	Commenced July 28; for a union agreement providing for increased wages and changes in working conditions; untermiated.

(1) Preliminary data based where possible on direct reports from parties concerned; in some cases incomplete; subject to revision for the annual review.

(2) In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing up to date that given in the March, 1947, issue in the review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the countries for which such figures are available. Statistics given in the annual review and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The *British Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in May, 1947, was 100 and 24 were still in progress from the previous month, making a total of 124 during the month. In all stoppages of work in progress in the period there were 70,200 workers involved and a time loss of 181,000 working days was caused.

Of the 100 stoppages which began during May, nine arose out of demands for advances in wages; 31 over other wage questions; 16 on questions as to working hours; 11 on questions respecting the employment of particular classes or persons; 30 on other questions respecting working arrangements; and three were on questions of trade union principle.

India

Preliminary figures for January, 1947, show 158 work stoppages, involving 108,345 workers with a time loss of 1,084,919 man-days.

Preliminary figures for February, 1947, are reported as 112 work stoppages, with 106,960 workers involved and a time loss of 925,529 man-days.

United States

Preliminary figures for June, 1947, show 350 strikes and lockouts beginning in the month, in which 475,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 3,750,000 man-days. Corresponding figures for May, 1947, are 425 strikes and lockouts, involving 200,000 workers with a time loss of 5,700,000 days.

Prices

Prices, Retail and Wholesale, in Canada, July, 1947

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics cost-of-living index rose 1.0 points to 135.9 between June 2 and July 2, 1947. Firmer food prices were again mainly responsible and an index for this series moved up 2.1 points to 159.8 due to increases for butter, cheese, eggs, lamb, rice, cocoa, potatoes, marmalade and lemons. Home furnishings and services advanced 2.7 points to 142.5, reflecting increases in furniture, home furnishings and cleaning supplies. Higher prices for men's suits, rayon slips and footwear advanced the clothing series 0.8 to 143.2. Fuel and lighting rose 0.6 to 117.3 and miscellaneous items 0.1

to 117.2. There was no change in the rentals index at 117.8.

Cost of Living in Eight Cities

Cost-of-living indexes for eight regional cities were all higher between June 2 and July 2, 1947, led by a gain of 2.2 points to 138.4 for the Saskatoon series. Toronto at 135.1 and Winnipeg at 131.5 were each up 1.8 points while Halifax rose 1.6 to 132.6; Saint John 1.4 to 133.5; Edmonton 1.3 to 132.6; and Montreal and Vancouver each 0.8 points to 138.5 and 135.1 respectively. Firmer

(a) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

(a) First of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) New wartime price series on base December 1942=100, computed quarterly beginning March, 1943. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised. (j) From August, 1945. "Consumers Price Index for Moderate-Income Families in Large Cities".

food prices also continued to dominate the advance in city indexes although higher quotations were noted for items included in the clothing, fuel and lighting, and home furnishings and services sub-groups.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada, at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores, although these are included in the calculation of the index, since the movement of chain store prices agrees closely with the movement of independent store prices.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail price of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is included in Table I.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expenditure was \$1,413.90 divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.59; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index brought the total family living expenditure to \$1,453.80.

Wholesale Prices, June, 1947

The general level of wholesale prices rose a further 2.5 points to 127.8 between May and June, 1947. All group changes were upward. Non-ferrous metals led with an increase of 11.8 points to 126.9 due to sharp increases in copper, lead, zinc and solder. Substantially higher prices for cotton thread, yarn and fabrics, as well as for raw wool and wool cloth advanced the textiles group 7.2 points to 131.1, while firmer quotations for quebracho extract, dynamite, white lead, iodine and soap overbalanced a drop in shellac to advance the chemicals group 7.0 points to 110.9. In the non-metallic series an increase of 1.6 points to 113.0 was due to stronger prices for bricks, United States bituminous and Welsh anthracite coal, while wood, wood products and paper moved up 1.8 to 162.8 supported by higher prices for pine, spruce, hemlock and hardwood lumber, and wrapping paper. Export prices of shingles were lower. Animal products advanced 1.6 points to 129.6, reflecting strength in live stock, raw furs, footwear and eggs, while a gain of 1.1 to 134.8 registered for iron and its products was due to upturns for cast iron pipe, wire nails and car axles. Vegetable products recorded the smallest advance, rising only 0.4 to 111.8. Firmer prices for rye,

potatoes, cocoanut oil, pepper and oranges overbalanced weakness for raw rubber and turpentine.

The monthly index of Canadian farm product prices at wholesale registered moderate strength in June, advancing 0.7 to 119.2 over

the May level. In the animal products section firmer prices for live stock, eggs and wool were responsible for a gain of 1.0 to 144.4, while higher quotations for rye and potatoes outweighed weakness in onions to move the field products series up 0.5 to 104.1.

Fatal Industrial Accidents in Canada During the Second Quarter of 1947

THERE were 316 industrial fatalities in the second quarter of 1947 according to the latest reports received by the Department of Labour. In the previous three months there were 303, including 16 in a supplementary list. The accidents recorded are those occurring to persons gainfully employed during the course of, or arising out of their employment, as well as fatalities from industrial diseases reported chiefly by the Provincial Workmen's Compensation Boards.

During the quarter under review, there were six industrial accidents which resulted in the deaths of three or more persons in each case. On April 24, twelve miners at Norrie, Quebec, were asphyxiated when a fire broke out in a shaft in which they were working. At Vancouver, British Columbia, the three crew members of a missing airplane were listed as dead on April 28. A storm which swamped their fishing boat in New London Harbour, Prince Edward Island, resulted in the drowning of four lobster fishermen on May 2. Three construction workers were killed near Courtenay, British Columbia, on May 29, when a logging truck collided with the car they were driving in. At Longueuil, Quebec, a pilot and three employees of a mining company lost their lives on June 1 when the plane in which they were travelling plunged into the St. Lawrence River. Twelve crew members of the freighter *Emperor* were drowned on June 4 when the steamer struck and sank at Canoe Rocks in Lake Superior.

The statistics on industrial fatalities are compiled from reports received from the Provincial Workmen's Compensation Boards, the Board of Transport Commissioners, certain other official sources, and from LABOUR GAZETTE correspondents. Newspaper reports are also used to supplement these data.

Grouped by industries the largest number of fatalities, 58, was recorded in transportation. During the previous quarter 85 deaths occurred in this group. Of the total of 58

fatalities, 26 were in steam railways and 18 in water transportation. In the previous three months there were 33 industrial deaths in steam railways and 35 in water transportation.

Of the 56 fatalities in the mining group 42 were in metalliferous mining and 11 in coal mining. In the previous quarter 33 deaths were recorded in mining, 28 being in metalliferous mining.

In manufacturing 35 fatalities were recorded as compared to 57 in the first quarter of 1947. The manufacturing group included 14 deaths in iron, steel and products and 9 in saw and planing mill products.

The number of fatalities in logging was 39 and in agriculture 23, as compared with 49 and 12 respectively in the previous quarter. Fatalities recorded in trade numbered 9 and in service, 28.

In the construction group, 38 fatalities were recorded of which 29 were in buildings and structures. In the previous quarter 25 deaths occurred in this group, 16 of which were in the construction of buildings and structures.

Moving trains, watercraft and other vehicles caused 123 fatal industrial accidents during the quarter. This was the most important cause of fatalities in the period (Table II). In the previous quarter 99 industrial deaths were classified in this group.

Dangerous substances caused 45 deaths, and falling objects, 34. Industrial diseases, infection and other causes resulted in 64 fatalities while falls of persons caused 40 deaths.

The greatest number of fatalities was recorded in Ontario with 138 (Table I). In the previous quarter 127 occurred in Ontario. In British Columbia 69 fatal industrial accidents were recorded and in Quebec, 32. Comparative figures for the preceding quarter were 62 for British Columbia and 47 for Quebec.

The largest number of fatalities occurred in June with 118. In April 101 were recorded and in May, 97.

Notes of Current Interest

Labour Day Message of Minister of Labour

The Honourable Humphrey Mitchell, Minister of Labour, issued the following message on Labour Day, 1947:—

"On the occasion of Labour Day, 1947, two years after the end of the world's greatest war, I want to extend greeting to all the workers of Canada and to wish them well in the future.

"As we regard the situation elsewhere at this time, I think we can all be very thankful for the rate of Canada's recovery from the effects of the last war. We have moved through the transitional period in a way that is reason for general satisfaction. It is true that we have not yet caught up with shortages in many lines, but I think we have done well and that our national economy rests on a sound basis, giving us much hope for the future.

"We have enjoyed high employment, especially during the past year. The income of workers by way of wages and salaries has reached a new record total. There has been a steady absorption of workers in our most productive activities and, in fact, there has been a shortage which we have partially met by bringing persons from Europe. That is most true in regard to lumber camps and agriculture.

"One of the notable features about the present day situation is the greater measure of industrial peace which exists throughout Canada. That, of course, is a prime requisite in taking advantage of our stability to pro-

ceed to increased prosperity. There are one or two spots where labour and management are in disagreement, but, taking the picture of the country as a whole, I think we have cause to be pleased with the harmony that prevails. It is a tribute to the common sense of both the workers and management.

"International warfare, such as we had between 1914 and 1918 and 1939 and 1945, is, of course, wholly destructive to life and property and to our national well-being. Industrial warfare is much the same: it destroys the good feeling that should exist between workers and management; for its duration there is an end to production and, of course, the loss of wages and salaries. One never catches up with lost income and lost production; it is difficult to heal the wounds of rancour.

"It is true that many years ago there had to be all-out struggles between the workers and some employers to secure the gains to which the workers felt they were entitled. We have not yet reached the millennium and never will, humans being what we are, but there now is a greater realization that everything that is reasonable can be obtained by reasonable means.

"It has been my great pleasure in the past year often to meet with the leaders and members of all our labour unions. I have been impressed by the strength of these organizations and by the intelligent and effective steps through which they seek to bring benefits to all workers. On the other side, of course, we have strong and active.

associations of employers. The main fact to consider, however, is that all who belong to labour unions and employer associations in Canada are Canadians, and that deep in their hearts what they desire is to see Canada prosper and thus to assure prosperity to themselves. The combined strength of our labour unions is now at a level that indicates to all the importance of the movement to our country as a whole. The future of Canada indeed rests very heavily on our labour unions. I know that that responsibility is fully appreciated.

"There is a thought I would like to express and it is one of congratulation to the labour movement for the co-operation which has been shown in connection with the help extended to displaced persons in Europe. Understanding the pitiable condition of the hundred of thousands of helpless men and women in Europe, the workers of Canada have displayed a spirit of sympathy and practical help with regard to the absorption of many of these unfortunates into our life.

"On this Labour Day of 1947 there will be throughout Canada hundreds of celebrations; it is labour's traditional day. The keynote can certainly be one of rejoicing for what has been gained in the past and what is hoped for in the future."

Labour Day messages by labour leaders

Leaders of Canada's labour organizations in Labour Day Messages made reference to the progress that has been made by organized labour and its present role in the economic and social life of the country.

Mr. Percy Bengough, President of the Trades and Labour Congress of Canada pointed out that Labour Day had become "a kind of stock taking day for labour, when we check up on our past woes and wins and rededicate ourselves to bringing into effect, by legal processes, further improvements in the living and social standards of workers. . . ." He asserted that "unquestionably the conditions of labour and people generally have improved in Canada . . ." and he paid tribute to the efforts and achievements of "many good men and women" who have in the past, "gone down the road we are travelling over to-day." "Organized labour," he said, "is proud of its heritage and proud to be citizens of this great and democratic country. . . . We celebrate the past and dedicate ourselves to the future."

Mr. Bengough declared that workers seek more wages, in order that the standards of living of themselves and their families may be maintained in the face of rising com-

modity prices. He asserted that "the well-being of Canada requires that its citizens have a buying power in balance with their productive ability. . . . We again repeat," he said, "that every citizen of Canada, able and willing to work, is entitled to employment at a rate of wages or salary that will provide a good home and comfort to himself and his family and that the fear of want and insecurity must be eliminated for the whole of their lives." To that end organized labour wanted "an all-embracing system of health insurance that will provide efficient treatment during illness and a real old-age pension in balance with Canadian standards of living." These objectives "would be sought through the medium of our democratic institutions and are worthy of the support of all citizens," he said. In conclusion, he asserted that labour conceded to capital "a fair return on its investment, but we do insist on a fairer distribution of the good things of life to all those . . . that have invested themselves and their lives into the production of agriculture and industry."

Mr. A. R. Mosher, President of the Canadian Congress of Labour referred to the present unsettled world conditions, declaring that "everywhere one is faced with problems, political, economic and social in both domestic and the international spheres." He continued, "it is no easy task to be a citizen of the world in these unhappy days, but the best way to begin is to be as good a citizen of Canada as possible, and to increase Canada's ability to raise her own standards of living, while at the same time contributing to the utmost extent to the welfare of the other nations."

Mr. Mosher contrasted the extensive labour unrest that existed a year ago, with the more favourable conditions at present. He asserted that employers are now "more ready to recognize that even those workers who obtained increases (in wages) last year have had them nullified by the rapid increases in the cost of living which followed the removal of controls and subsidies." This attitude of employers was gratifying not only to the labour movement, "but to all those who understand the desirability and necessity of establishing a sound basis of industrial harmony and co-operation and thus building the economic and social structure of the Dominion upon enduring foundations."

He asserted, however, that "strangely enough this greatly improved attitude on the part of employers is being offset to some extent by the reactionary attitude of certain provincial governments, and it is possible that any trouble which may arise in the

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

NOTE.—Much of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

*Factory shipments.

immediate future will be due more to unfair legislation than to unfair treatment by employers."

In spite of the problems of the day, Mr. Mosher felt that "the outlook for Canada is fairly encouraging." He asserted that organized labour had maintained its strength and prestige in the post-war period and is "developing into a national institution with a full appreciation of its rights and responsibilities."

Mr. Gerard Picard, General President of the Canadian and Catholic Confederation of Labour, said it was important for the public to realize that organized labour, taken as a whole, did not by any means have the revolutionary character that was attributed to it in certain quarters. "There are not twenty-five important industrial disputes in Canada a year, and scarcely half a dozen in the Province of Quebec."

Mr. Picard said that in Quebec collective bargaining had given birth to about 100 orders under the Collective Agreement Act; about 500 collective agreements under the Labour Relations Act and the Public Service Employees Disputes Act; and about 500 contracts under the Professional Syndicates Act. Approximately 300,000 employees, male and female, were at present subject to these orders, agreements and contracts.

Referring again to the small number of important strikes, Mr. Picard said that these were, however, given more sustained and unfavourable publicity than lockouts, bad legislation, or the unjustified interventions of provincial police.

Stating that the Canadian Criminal Code and the Quebec Civil Code were out of date and not adequate in the face of modern social problems, Mr. Picard said that a true Labour Code was needed in the province, which would be complete and would deal not only with the regulating of collective bargaining but also with the legal existence of trade unions, collective agreements and orders, union security, the public service, industrial security, conciliation, arbitration, labour tribunals, minimum standards of wages and hours, industrial accidents, social security, strikes, picketing, protective measures, employers' associations, and other matters.

Employment and industrial statistics

The accompanying table contains the latest available statistics reflecting industrial conditions in Canada.

Figures are shown for certain months in the current year as compared with the corresponding period in 1946.

Business activity continued at a high level in July, according to available statistics. Em-

ployment was the highest ever recorded during the month of July. Per capita weekly earnings reflecting increases in wages and high employment, continued to rise.

Employment and Earnings—The index of industrial employment, calculated by the Dominion Bureau of Statistics, stood at 189.0 at July 1 as compared with 184.5 in the preceding month and 173.6 at July 1, 1946, at which time the situation was greatly affected by industrial disputes. The latest index is the highest for any July in the record. The increase in employment, as compared with the war years, is due largely to improvement in the non-manufacturing industries. A comparison with the pre-war years indicates that the increase in employment is largely a result of greater activity in both manufacturing and non-manufacturing industries.

A pronounced increase in employment was reported in manufacturing at July 1 as compared with the previous month, notably in food processing, lumber, pulp and paper and iron and steel plants. In the non-manufacturing group, there were large seasonal gains in mining, communications, transportation, construction and maintenance, hotels and restaurants and in retail and wholesale trade. Only in logging was there a moderate seasonal decline. In mining, the substantial increase resulted largely from the resumption of operations on a more normal scale following the settlement of the coal strike in Nova Scotia and New Brunswick.

Reports from 17,760 employers showed combined staffs 1,946,032 persons, an increase of 46,494 from the total reported at June 1. The pronounced advance in industrial employment at July 1 as compared with the previous month was accompanied by a relatively greater rise in weekly wages and salaries. Payrolls distributed by the reporting firms at the beginning of July rose to \$70,317,314, from \$68,375,865 reported at June 1. The greater percentage increase in the payrolls as compared with that in personnel was partly due to the payment of higher wage-rates in certain industries, but the settlement of the Maritime coal strike was also a factor. The weekly average per employee at the date under review was \$36.13; at June 1, the figure was \$36. Per capita figures at July 1 in earlier years were: 1946, \$32.25; 1945, \$32.32; 1944, \$31.72; 1943, \$30.97; 1942, \$28.49 and 1941, \$25.49. Since the beginning of the monthly record of payrolls at June 1, 1941, there has been an increase of 43.1 per cent in average weekly earnings.

Prices—The general index of wholesale prices, based on the 1926 average as 100, was 129.1 in July as compared with 127.8 in June and 109.5 in July, 1946. Six of the component sub-groups showed increases while two declined slightly. The index of vegetable products advanced 1.7 points from 111.8 in June to 113.5 in July while the index of animal products declined 0.2 points, from 129.6 to 129.4 in the same period. Increased prices for maple lumber, cedar shingles and wood pulp were reflected in the index of wood products which rose to 165.0 in July from 162.8 in June. The index of textile products increased 1.1 points from 131.1 to 132.2. Increased wholesale prices were noted for rayon fabrics, woollen cloth and sisal rope while a decrease was shown for cotton thread. The indexes of non-ferrous metals and of non-metallic minerals rose from 126.9 to 131.1 and 113.0 to 114.4 respectively. In the non-metallic mineral group coal tar, glass, fuel oil, sand, gravel and crushed stone showed increases. Among the non-ferrous metals, the price of silver decreased while the wholesale prices of aluminium sheet, copper, lead ingots and pipe showed advances. The index of iron products rose slightly from 134.8 to 135.0 while the index of chemical products moved from 110.9 to 110.8. The index of producers' goods rose from 128.5 in June to 129.4 in July while the index of consumers' goods advanced from 116.5 to 117.5. The index of Canadian farm products showed an increase of 0.9 points, from 119.2 to 120.1.

The cost-of-living index, based on average prices for the years 1935 to 1939 as 100, advanced 0.7 points to 136.6 on August 1 from 135.9 on July 2. At August 1, the index was 9.6 points higher than at the beginning of the year, and 11 points higher than on the corresponding date last year.

The advance over July 2 was led by a rise of 2.3 points to 145.5 for clothing. In this group increases in men's clothing predominated, followed by upturns in footwear, women's wear and piece-goods. Fuel and lighting increased 1.3 points to 118.6 as a result of scattered increases in the prices of coal and coke. Home furnishings and services moved up 1.2 points to 143.7, reflecting higher prices for cleaning supplies and furniture. A gain of 0.8 points to 160.6 for foods was one of the smallest in several months. The remaining two groups were unchanged: rentals at 117.8, and miscellaneous items at 117.2. The advance in the general index since August, 1939, was 35.5 per cent.

Employment of woods workers and domestics from displaced persons' camps Late in July 725 woods workers arrived in Canada from displaced persons' camps in Germany, and were despatched by special train to woods operations in Northern Ontario.

The men, who volunteered to come to Canada to help meet the shortage of woods workers, are being housed in existing woods camps which are inspected to insure that living conditions are satisfactory. They are receiving the going wages and are employed under the same general conditions as regular Canadian woodsmen.

Early reports from the woods industry and Department of Labour officials indicate that the men are generally making an excellent impression, are pleased with their employment and their surroundings, and are enthusiastic about their new life in Canada.

Regular Canadian woodsmen in the camps where the new workers are employed state that they are quite happy to welcome these men. They feel they will adjust themselves quickly to Canadian conditions.

Of the men 328 are from displaced persons camps in the British occupied zone of Germany, and the remainder from similar camps in the United States zone. Before selection, all applicants were assembled at central points in each of these zones where the Canadian Selection Team consisting of Immigration and Labour officials assisted by representatives of the woods industry interviewed each of them individually.

The largest single group consists of men from the Baltic countries. There is also a considerable number of Poles with smaller numbers from numerous other countries. Their ages range from 19 to 41, with most of them under 35.

The men constitute the first contingent of close to 3,000 workers from the same source who were expected to arrive in Canada by mid-September.

A further movement of displaced persons from European camps to Canada, sponsored by the Department of Labour and the Immigration Branch of the Department of Mines and Resources, consists of 1,000 women for domestic work.

Selection teams, made up of women officials of the two Departments, sailed for Europe in August. If the movement proves satisfactory, further movements of women as domestics from the camps will be carried out. Out of the first 1,000 it is hoped to relieve the acute shortage of housekeeping help in hospitals and

service establishments. In future movements of women, attention will be given to the general need for household workers throughout the country.

**Closing of
Japanese
Placement Hostel
at Moose Jaw**

On August 15, 1947, the Department of Labour issued the following statement in regard to the closing of the Japanese placement hostel at Moose

Jaw, Saskatchewan:—

"Hon. Humphrey Mitchell, Minister of Labour, announces the closing on August 13 of the Japanese placement hostel at Moose Jaw, Sask. The Department of Labour feels that the public might wish to know something of the background to this action.

"During 1942, when the Department was carrying out the Government's policy of evacuating 21,000 people of Japanese origin from the Pacific coast protected areas due to the war emergency, certain individuals, mostly born in Japan, were interned either upon suspicion of subversive activities or because of refusal to co-operate in the evacuation. This group totalled nearly 800 and were interned at Angler, Northern Ontario.

"From 1943 through 1946 the large majority of these were screened by the Royal Canadian Mounted Police and were released individually for placement by the Department in various types of essential employment, where they have worked quietly and industriously. They have nearly all become re-established with their families in new environments.

"In 1946, another 150 to 200 internees decided to repatriate of their own free will to Japan, and were given the same free transportation and allowances to assist them on their way as were provided to other repatriating Japanese from Canada.

"The residual group of approximately 100 ex-internees were reunited in the summer of 1946 with their families at the Moose Jaw hostel. They were the unco-operative core of the former interned group who took the position they must be returned to Japan by force.

"It was felt that by reuniting them with their families and mingling them with the other Japanese from British Columbia in the placement hostel, they would regain a sense of reality and decide to resume normal life. During the last twelve months this has developed, and all but about 35 of the former internees have moved out to ordinary employment with the assistance of the Department.

"This last small group with relatives under their influence, totalling 60, are all employ-

able men who have persistently refused numerous offers of suitable employment with accommodation on the prairies or in eastern Canada, as well as transportation and relocation allowances offered by the Department. They are unwilling to make any effort to support themselves or re-establish themselves in normal life.

"The Department has therefore in the interests of economy closed the messing facilities at the Moose Jaw hostel. This group of 60 will be allowed to remain for the time being in the living quarters at the hostel but will have to obtain and cook their own food. The Departmental placement officers will, however, continue to provide assistance to those individuals or families who change their minds and accept employment offers or who decide to go back to Japan on the next voluntary repatriation ship."

**Staff training
program in
Dominion
Civil Service**

Some 13,000 civil servants in sixteen Government departments have been given instruction in various phases of the Dominion Government's staff training program since

its inception in 1944. Most of the subjects covered in the program are presented by the conference method, whereby a conference leader gives instruction to a group of eight to twelve employees.

For new employees an induction training program has been developed for the purpose of acquainting them with the organization of which they are a part. A refresher course covering stenography, typewriting and English has been introduced in several departments. Courses in public relations, public administration, filing and correspondence are being developed, while a special course for office boys and girls is under consideration.

The series of courses in supervisory training, which have proved their usefulness in industry and which have been sponsored by Canadian Vocational Training (L.G., 1945, p. 1755), have been offered in a number of departments. These courses include training in the technique of instruction, the improvement of working methods, accident prevention and job relations.

To help trainees retain the material presented in the courses, "refresher" pamphlets are to be distributed. Visual instruction is given through the use of a film library.

The courses, which were first offered by the Department of Labour, are now under the direction of the Staff Training Branch of the Civil Service Commission. They are given during working hours.

**Minutes of early
labour meetings
presented to
Department of
Labour**

The early days of the trade union movement in Canada were recalled recently when Mr. J. W. Buckley, acting secretary of the Trades and Labour Congress of Canada presented a bound copy of the minutes of the first meetings of the Toronto District Trades and Labour Council, 1871 to 1887, to Hon. Humphrey Mitchell, Minister of Labour, for the Labour Department library.

Accompanying Mr. Buckley were Mr. Percy R. Bengough, President, Trades and Labour Congress of Canada, and Mr. Arthur E. Hemming, associate Secretary-Treasurer of the Congress.

The records of the initial meetings of the first central labour body in Canada offer a wealth of material to the student of trade unionism and the advance of industrial relations. One of the most interesting facts contained in the book is a record of the first Labour Day Demonstration on the North American continent—April 15, 1872, in Toronto.

In making the presentation, Mr. Buckley pointed out that the original minutes were lost to the Toronto District Labour Council in 1887 and were not recovered again until 1938, 50 years later.

**Distribution of
labour films
by National
Film Board**

During the war years showings of films of labour and industrial interest were organized by the National Film Board through the trade union and industrial circuits. Designed to help morale, to give training in production operations and in accident prevention, and to provide information on a variety of topics, the films reached a monthly audience of about 100,000 workers.

With the ending of these circuits, the Film Board has developed arrangements by which industrial, labour and community groups make their own arrangements for obtaining and using appropriate films. Films produced for federal government departments are deposited in film libraries from which they are made available to such groups. Special attention has been given to forming industrial film councils, in which the industrial firms in a given area co-operate in providing their own film facilities. This movement is under way in most parts of Canada, with the assistance of regional officers of the Film Board.

Trade union circuits are being replaced by the trade union film council plan. During the coming season films of interest to trade unions

will continue to be placed in local film libraries and brought to the attention of labour organizations. Such films are selected by the National Labour Union Film Committee, which includes representatives of the two Congresses and the Workers' Educational Association.

Among the labour films recently released are the "Accidents Don't Happen" series, "Operation Employment," "Building for Tomorrow," "Workers on the Land" and "ILO."

**Agreement
reached in
Great Lakes
shipping dispute**

On August 22, the Minister of Labour announced the finalization of an agreement between the Canadian Seamen's Union (TLC) and three Great Lakes Shipping Companies on the issue of "shore delegate" passes for members of the Union.

The agreement was achieved partly on recommendations of Mr. Leonard W. Brockington, K.C., appointed on July 20, as an Industrial Disputes Inquiry Commission to investigate the situation and attempt to negotiate an agreement, and partly as a result of conversations held between the Minister and his Deputy and representatives of the Union and the Canadian Steamship Lines, Limited, the Sarnia Steamship Limited, and the Colonial Steamship Company Limited.

Terms provided that passes to board company vessels would be made available upon receipt by the Companies of a duly certified form of application, and signed documents waiving the right of the agent to sue for damages due to injuries sustained aboard its vessels; and assuring that the agent was a Canadian citizen, was neither a Communist nor a communist agent, and that he agreed not to engage in any political activity aboard ship.

A fuller account appears in the *Industrial Disputes and Conciliation* Section of this issue (p. 1274).

**Trade union
ruled legal
entity in B.C.**

The decision that a trade union, which comes within the British Columbia Industrial Conciliation and Arbitration Act, is a legal entity which may be prosecuted as such, was given by Mr. Justice Macfarlane of the B.C. Supreme Court on July 22 and confirmed on August 12 by the Court of Appeal. A summary of the former's judgment appears in the *Labour Law* section of this issue and that of the Appeal Court will appear next month.

Ottawa Labour Association celebrates fiftieth anniversary Ottawa Allied Trades and Labour Association celebrated its golden jubilee early in August. The climax to the observance was a dinner-dance at which the Hon. Humphrey Mitchell, Minister of Labour, Mr. Percy R. Bengough, President of the Trades and Labour Congress of Canada, Mr. Nelson Cruikshank, Director of Social Insurance Activities, American Federation of Labour, Mayor Stanley Lewis of Ottawa, and Mayor Raymond Brunet of Hull, were guests of honour.

Hon. Humphrey Mitchell declared that in the past 50 years the Association had "learned the virtue of patience and persistence and that reforms cannot come over night." He continued, "I am in a position to know how substantially your Association has contributed to the stabilization of industrial relations during the war and since in the city of Ottawa, a contribution which I heartily commend."

In a brief review of the history of the Ottawa Association, Mr. Bengough paid a tribute to the services rendered to organized labour by the Ottawa Association, referring specifically to the "lifetime of service" rendered by the late "Paddy" Draper, who had been a member of the Ottawa Association, and for many years was Secretary-Treasurer and later President of the Trades and Labour Congress of Canada. But while celebrating "a glorious past," Mr. Bengough urged trade unionists to "continue the work of our predecessors . . . towards a system of life that will guarantee to every citizen, an adequate income sufficient to provide a good home and comfortable living for himself and his family; that will free all from fear of want . . . with efficient treatment during illness and full protection in old age".

Mr. Cruikshank brought fraternal greetings from President William Green of the A.F.L. He drew attention to the dangers inherent in policies promoted by both the "left wing" and the "right wing" and urged that "if the leaders of the world would listen to, and be guided by the aspirations of the common man, real peace and security would come to us all."

Liability of young workers to machine accidents The greater liability of juvenile workers to accidents is emphasized in a recent statement by the United States Department of Labour which was based on a survey of manufacturing industries in 1945.

The industries included iron and steel, textiles, paper and allied products, food products, leather goods, chemical products and many others. Office, clerical and sales workers were included as well as those employed in production, maintenance and transport.

For workers under 18 the rate of disabling injuries, that is those causing disability for more than the day of the accident, was found to be one and a half times as great as among those over 18, and the rate of accidents causing permanent disability was almost twice as great.

It is generally agreed that young workers are more liable to machine accidents if they are permitted to work about machinery. The result is permanent disabilities. In Illinois, which maintains records of workmen's compensation cases by ages, it was reported in March, 1946, that not only were two-thirds of the accidents to workers under 18 in manufacturing industries but that one-third of them were machinery accidents, chiefly on power-driven machinery.

The greater liability of juveniles to accidents, particularly machine accidents, and the need for the regulation of employment in hazardous operations has also been emphasized repeatedly by the Chief Inspector of Factories in Great Britain in his annual Report.

United States Government prosecutes firms for price conspiracies An investigation, engendered by the continuing high level of prices in the United States, has been launched into price fixing practices by the United States Department of Justice. In announcing the investigation, Attorney General Tom C. Clark stated that it had as its object the criminal prosecution of those conspiring to increase prices.

The Attorney General said that his Department would press for the imposition of jail sentences for individuals convicted and maximum fines against convicted corporations. He emphasized that although the criminal provisions of the nation's anti-trust laws had, in the past, been invoked, failure, except in a few cases, to impose penal sentences had rendered enforcement relatively ineffectual. This fact, plus soaring prices in the food, clothing and housing fields, indicated the need for a new and more vigorous approach, he stated.

The statement noted that, in the state of the union message in January, "President Truman pointed out to the Congress that, despite half a century of anti-trust law enforcement, one of the gravest threats to our welfare lay in the

increasing concentration of power in the hands of a small number of giant organizations, and that today we find that to a greater extent than ever before whole industries are dominated by one or a few large organizations which can restrict production in the interest of higher profits and thus reduce employment and purchasing power.

"In his recent midyear economic report, the President warned that prices, to support a prosperous economy, must be kept down to the lowest point compatible with costs and reasonable business incentives and that a free enterprise system cannot tolerate collusion in price, in curtailment of output, or in restriction of capacity expansion, or the hampering of the entry of new firms into the business life of the community.

"The anti-trust program for this year will be aimed at these vital problems.

"In addition to the new program the division will continue its present activities aimed at breaking up monopoly power in various industries."

Complaints by the Department of Justice laid against alleged monopolies up to the end of August named many of the major producers of steel, rubber tires and tubes, oil, moving pictures and real estate organizations.

Discharge provided for in incentive scheme

Business Week of August 16 reports the establishment of an incentive system providing for discharge in the event that normal work standards are not met, as well as benefits for more efficient production.

Concluded between the Air Conditioning Institute, representing 22 Detroit companies and the AFL Sheet Metal Workers Local 281, the incentive plan affects some 1,500 workers installing galvanized ducts in houses for gas, oil or coal heating plants.

The article states that in "figuring the amount of incentive pay, the institute and union have agreed on \$54 as the cost of installing ducts in an average 6-room house. If a worker can install the duct for less than \$54, he is entitled to share from 50 per cent to 75 per cent of the difference. The union figures that a worker can add as much as \$15 a week to his paycheck under the plan. And the institute feels that both it and the consumer benefit through the maintenance of price levels. Where a worker cannot install the duct for \$54 or less the institute may seek his discharge on the basis that he is either indolent or not sufficiently skilled.

"Whether the negative incentive can have any practical effect remains to be seen. In those few instances where it has been licensed in a labour agreement it has rarely been utilized."

Britain and France conclude agreement on recruitment of displaced persons

In order to facilitate the recruitment of displaced persons of non-German origin, Britain and France have agreed to arrangements whereby the necessary facilities for such recruitment in their occupied zones of Austria and Germany are to be made mutually available. This entails the use of both nations' assembly and selection centres, free access to all camps in the respective zones, free supply of necessary petrol and oil and provision of information and documents concerning displaced persons.

Displaced persons admitted to work in France or the U.K. are to receive the same pay as French or British workers, enjoy the same rights as aliens in general, and may bring in their own property with due regard to available transport.

Displaced persons admitted to work in France or the U.K. are to receive the same pay as French or British workers, enjoy the same rights as aliens in general, and may bring in their own property with due regard to available transport.

For a period of 18 months after each displaced person enters France or the U.K., he may be deported if found unemployable or undesirable (having cancelled his contract without good reason, shown himself unsuitable, or if he constitutes a danger to security or public order).

Stateless displaced persons are to receive the protection of the Intergovernmental Committee for Refugees.

The extent of recruitment envisaged during the first two-month period of the agreement, concluded on June 10, 1947, was expected to amount to some 24,000 workers.

Forty-hour week in New South Wales

A statutory 40-hour week came into effect in New South Wales on July 1. The Act applies to all industries, except coal mining

and those covered by awards made either under the New South Wales Industrial Arbitration Act or the Commonwealth Industrial Conciliation and Arbitration Act, and except domestic servants, fire-brigades and certain classes of employees in rural industries.

Some flexibility in the daily and weekly hours-limits was provided for by a stipulation that the number of ordinary working hours shall not exceed eight in any consecutive 24 hours, or 40 in a week, or 80 in 14 consecutive

days, or 120 in 21 consecutive days, or 160 in 28 days. In the public interest longer hours may be permitted by the New South Wales Industrial Commission and by Conciliation Committees and, for health reasons, the hours may be shortened. The same amount of wages is to be paid for the 40-hour week as for the 44-hour week.

A new provision permits shorter hours than the normal statutory number to be fixed by an agreement or by an award which is made by consent. Previously, such awards or agreements could not be validly made; only the Industrial Commission could permit reduction below standard hours. This provision, however, is subject to appeal by the Crown for an order to suspend, vary or rescind such award or agreement.

Mediation machinery established in Italian plants A scheme to provide all Italian factories with mediation machinery has been agreed to by the Italian General Confederation of Industry and the General Confederation of Labour, according to a recent article in the *New York Times*.

The agreement provides for the compulsory creation of factory commissions in Italian industrial concerns employing more than twenty-five workers. In smaller places there will be a single delegate elected by the workers.

The commissions and delegates will not have a voice in running the plants but will co-operate with management in the solution of all labour problems. They will watch the application of labour contracts, and will intervene to settle all collective or individual labour controversies.

If any concern finds it necessary to reduce its staff, the commission or delegate will assist the management in drawing up a list of workers to be dismissed. It is hoped that they will be buffers between management and the workers, contributing toward softening all controversies.

"The members of the factory commissions will be elected by the workers," the article states. During their term of office and for one year afterward they and the workers' delegates

may not be dismissed or transferred without the consent of the workers and the industrialists' organization.

One article of the agreement states that the activities of factory commissions and workers' delegates must not hinder production.

Musical instruction of hospitalized veterans

Musical instruction as an aid in the rehabilitation of hospitalized veterans, commenced in a modest way by a New York Red Cross worker in the fall of 1945, is to be provided for patients in several veterans' hospitals throughout the State.

A report in a recent issue of the *New York Times* asserts that "the program has already received the highest commendation and support of high-ranking officials in the Army, Navy and Veterans' Administration." The program, which has been financed by the Musicians' Emergency Fund, has made a "valuable musical contribution to the hospitals in the New York area," and officials of the Veterans' Administration have requested the Fund to expand its activities to all hospitals in the New York area and eventually throughout the State.

For the past 18 months "the Fund has provided individual professional training, instruments and other supplies for 1,300 service men. . . . A drive for \$500,000 to guarantee continuance and expansion of the program for three years is under way," it is stated.

The announcement states that "in giving the patients a new interest and the opportunity to develop a new skill, the project helps to dispel discouragement and the monotony of long confinement, as well as to establish a regular contact with an 'outside person'—the music instructor." It is declared that "the work is especially important now that the war is over and hospitalized men tend to fear that civilians have forgotten them."

One hundred professional music teachers have been trained by the Fund and are paid for their work. It is planned to allocate part of the Fund's money for instruction of additional teachers, both for the expanded program in New York City and to aid in the commencement of similar programs in other areas.

*The Problem of the Older Worker**

A GENERAL scarcity of labour exists today, yet unemployment among older workers is steadily growing more serious. This marks the return of a fundamental problem which must be tackled not merely on the basis of its current urgency, but also in the light of the long-term developments which created it.

The war removed almost all age discrimination in industry. The country's manpower resources were stretched to the limit to meet the demands of the armed forces and of war industries. All available workers were urgently needed, and age was no barrier to employment.

With the end of the war, the problem of the older worker again took definite shape. Almost one million servicemen were returning to civilian life and the labour market; wartime developments had increased the technological replacement of individual skills; industry began the "weeding out" process, and the age of employees again became a determining factor in employment.

Three months after V-J Day, 26,000 persons of the 172,000 unemployed, or 15 per cent of the total, were "past 45." Since that time, the number of unemployed workers in this age group has grown markedly in proportion to total unemployment. By June 1, 1947, total unemployment had fallen to 91,000 (almost half the November, 1945, figure), but unemployment in the older age group had only declined to 21,000. The "over 45" group thus accounted for 23 per cent of total unemployment, in contrast to only 16 per cent at June 1, 1946, one year ago. Older workers, therefore, seem to be forming an increasingly large group of unemployed workers who are difficult to place.

At present, seasonal activity is temporarily absorbing many older workers, but the problem of permanent employment for them remains to be solved.

Industrialization and Population Trends

The war speeded up a trend which had been steadily developing with the growth of industrialization in Canada, and with the changing age distribution of the adult population.

Up to World War I, our national income came almost entirely from the production of primary products or related industries. The

first significant growth of industrialization came with the first World War. During the twenty-year period between wars, this expansion continued, although curtailed in the depression years. By 1939, manufacturing contributed 39 per cent of the total net value of production, as against 33 per cent in 1919. With World War II, further rapid strides in industrialization took place. The tremendous war program called for all types of goods, and at peak production in October, 1943, 30 per cent of the gainfully occupied were working in war and civilian manufacturing industries while only 23 per cent were engaged in agriculture.

The older workers unemployed today are the product of the above period. Those most difficult to place are unskilled, or with skills now obsolete. Many saw action in the first Great War, and consequently their normal training period was either blocked or seriously interrupted. Others had war jobs in assembly-line munition plants, where they did not gain a full grounding in any trade. After the war, few went into skilled work since there was relatively little industrialization at that time, and also because of the slump occurring in the early 'Twenties. In the following boom years, a sellers' market for labour prevailed and the average worker, though lacking any specific training, could find a relatively high-paying job in the boom industries, especially construction.

The depression of the 'Thirties affected unskilled workers most severely. Skilled workers were released much more slowly, and, with the recovery of economic activity in the latter part of the decade, were re-employed more quickly. In addition, the older age of the unskilled group now was beginning to play against their re-employment. The war temporarily relieved this situation, but it now has returned. In addition, the seeds of a similar future problem for the unskilled younger worker of today are evident in the present economic parallels to post-War I conditions.

The matter of understanding and adjusting the older members of society to jobs for which they are well-suited is emphasized by the changing nature of the adult population. A steadily-growing number of Canadian people are advancing into the "past 45" age group. In 1881, people over 45 years of age comprised 15 per cent of the total population; in 1901, 19 per cent; in 1941, 31 per cent. By 1971, it is estimated that more than five million Canadians will be in this age group.

* This article was prepared by the Research and Statistics Branch of the Department of Labour.

Population trends are moulded by such factors as life expectancy, birth rates, immigration and emigration. Progress in public health, medical science, and general welfare has increased life expectancy considerably. In 1901, an average man could expect to live for about 55 years—today he can hope for about 65 years. Until late in the 'Twenties, heavy immigration and a relatively high birth rate bolstered the younger age groups, thus obscuring to a great extent an aging of the native population. The result—instead of a gradual increase in the proportion of older people, the rise became abrupt once the immigrant population began to mature. The "over 45" group increased from 20 to 29 per cent, from 1921 to 1931. Immigration virtually ceased in the 'Thirties and this, together with a marked decline in the birth rate, emphasized the aging process.

Thus by 1941, almost one-third of the population was beyond 45 years of age. Although renewed immigration and a rising birth-rate are again rejuvenating factors, the "older age" segment of the population will continue to form an enlarging section of the labour force.

It would appear then that man's life is lengthening, but if his productive life cannot also be prolonged, then the burden for the support of a larger and larger older age group will fall upon a steadily decreasing proportion of younger persons—through taxes, if not directly.

Facts about the Older Worker

In order to reach sound conclusions about the real value of older workers and to look for a solution to their problem factual information is necessary as to their productivity and efficiency, and as to employers' objections to hiring them.

Analyzing the usual reasons given for any age barriers in industry, employers' objections to older workers can be classified under five headings:—

(1) Old age results in a lessening of productivity;

(2) Accident frequency increases with age;

(3) Group insurance is made more expensive;

(4) Pension plans do not make it practical to engage workers past 40 years of age;

(5) The older worker is not so adaptable to learning new techniques.

There is also a general attitude towards age which needs attention. It is a commonly accepted notion that chronological age—years and months—is synonymous with functional and physiological age. Everyday experience with people would seem to challenge this. Some people are old at 50 and others at 75.

S. Robinson, testing physical fitness in relation to age in a study carried on at the Harvard University Fatigue Laboratory, found in a large group of subjects ranging from 6 to 75 years that striking differences existed between individuals in the same age groups, while less extreme differences than would be expected were observed between the younger and older subjects. Sir William Osler has declared that "a man is as old as his arteries". In industry, it would be equally sound to say that a man is as old as his vision, his motor skill or his productivity.¹ Functional age, or the ability to perform efficiently the task involved, should be the important factor in employing an older man—not merely his chronological age.

Changes with age do not necessarily mean decline. Growth in one faculty compensates for a decline in another. While certain capacities are diminished, others are enhanced. For example, as speed of reaction is lowered with age, there occurs a compensatory increase in endurance. The loss of mere physical strength is normally balanced by the increased skill and good judgment resulting from long training and experience.

Most difficulties arise when an older worker becomes unable to perform his daily tasks in

¹ Ross A. McFarland, "The Older Worker in Industry".

TABLE I—UNEMPLOYED OLDER WORKERS AND THE TOTAL UNEMPLOYED

(Source: Labour Force Survey, D.B.S.)

Date	Total Unemployed	Unemployed aged 45 and over	%
November, 1945	172,000	26,000	15
March 1946	213,000	39,000	18
June 1946	126,000	20,000	16
September 1946	117,000	20,000	17
November 1946	115,000	21,000	18
March 1947	141,000	27,000	19
June 1947	91,000	21,000	23

the prescribed manner. Often only one or two features of the job are responsible for this situation—usually heavy lifting or physical strain of some kind. If changes can be made, it is often possible to retain these workers. Re-arrangement of duties, or the provision of special mechanical aids can often remove the obstacle.

The Question of Productivity.—The evidence on productivity at different age levels indicates that prejudices on this point are not always well founded. The physical and mental demands of various jobs, of course, differ greatly. But a survey made by the California Department of Industrial Relations in 1930 showed that most employers felt that "age has little relation to efficiency, although some jobs were more appropriate for older men than others". Many employers reported that they preferred middle-aged and older workers in positions calling for experience and judgment, and on jobs where quality was more important than speed.

In the automobile industry, which is largely on a piece-work basis, earnings reached their peak amongst workers in the age group between 50 and 55 years. A Works Progress Administration study of construction workers in seven major U.S. cities showed that the average age of workers whose output of work was considered excellent was 47½ years, while the average age of those in an inferior grade was 41. A study of New England plants in 1938 found "no tendency for output and earnings to diminish materially with age, except possibly above 60".

A report of tests in the Harvard fatigue laboratory stated that "the assumption of a rapid decline after 40 years of age in the quality and quantity of work is a social myth which, though in some respects not misleading, is in general grossly inconsistent with the evidence".

Accident Risks.—As for accidents, statistics show that accidents are most prevalent when workers are between 20 and 24 years of age. In addition, numerous studies have revealed a demonstrable decline of accidents with age. Older workers are more careful, cautious, experienced and mature than youth. Though involved in fewer accidents, however, older men take longer to recover, which would tend to balance the cost of accidents between the age groups.

Group Insurance Costs.—Regarding costs of group insurance a large Canadian Life Insurance Company quotes the following rates: "The premium for a Group Life Insurance

policy of \$1,000, age 25, is \$6.27 annually, and at age 40 it is \$7.85 annually, an increase of only \$1.58 per \$1,000 of insurance per year."

Pension Plans.—In connection with pension plans, it is understandable that under some schemes it is difficult to include new older workers. Where an employer either buys the pension outright or contributes at a higher scale for older workers to give them a suitable retirement pension, the costs would be increased considerably. Possibly the most common type of pension plan, however, provides that employers contribute to the fund a percentage of the wages paid to the employee, who also contributes. In this case, the size of the pension would then depend upon the number of years over which this joint contribution extended. No larger contribution is, therefore, involved for older workers. Other plans allow for the return of contributions to men who have not been with the firm long enough to warrant a pension.

In any case, most plans do not stipulate that an employee must be covered, and it is essential that some perspective should be maintained. Jobs are the important thing for the vast majority of unemployed middle-aged workers—pensions are secondary.

Adaptability.—While it is a popular idea that older people resist change, the past war years saw them doing types of work quite different from anything they had previously done and yet keeping pace with the average plant worker. The inability of an adult to learn may be due either to an original lack of mental capacity or to factors other than those relating to age.

The War Production Retraining Course at Harvard in 1943, for men 30-50 years of age, a fair cross-section of older workers, convinced professors that not only could these older workers retain and master new information, with adequate incentive, but also that they were able to contribute new ideas and procedures of definite originality and value because of their past experience in industry.²

Personality factors enter into this question, but the evidence does not condemn the older worker. One survey brought out comments such as "It is difficult to get an older person to work as a subordinate to a younger person . . . older people often have more characteristics hard to adjust to a new organization", but also comments such as, "Older applicants have certain advantages, so far as personal qualities are concerned, over younger applicants. The older applicants are more stable, more interested and appreciative of

² Ross A. McFarland, *op. cit.*

their job and working conditions, and form the backbone of an organization". Another survey, sponsored by the U.S. National Association of Manufacturers, found that only one employer out of six considered the adjustment of the older worker to new situations more difficult than that for younger workers, while almost exactly half of them said that age made no difference, and one out of three felt that older workers adjusted themselves more easily to changed conditions.

Thus, although an older worker may require more care in selection and in training for a job, once adjusted and part of the office or shop pattern, the findings indicate that he tends to be most reliable and efficient. His present job is his chief interest—he is not seeking personal advancement or looking for other work, but concentrates on his present duties and takes pride in his work. A younger worker, on the other hand, though perhaps adjusting himself more quickly, also becomes bored more easily with a routine, repetitive type of job, and with one eye on the future, tends to consider his current job as only a stepping-stone to better things. As a result, labour turnover is greater among younger workers.

The training of new employees is frequently very expensive. In general, the older worker remains on the job longer than a younger one. The greatest occupational mobility occurs amongst workers under 35 years of age, according to studies by Kitson and by Davidson and Anderson, and little shifting takes place thereafter.

Conclusions.—In summary, findings indicate that older workers save money for a firm because they have fewer accidents; their labour turnover is smaller, thus decreasing the expense of training new employees; their output usually equals that of younger men, and they cause less spoilage and breakage; they tend to be more stable, loyal and responsible, and are particularly valuable where there is little supervision.

The chief disadvantages are: they lose more days through sickness than younger workers; they are less adaptable to sudden changes in assignment; they have less muscular strength and agility.

The net value of a worker will depend, therefore, rather upon his physical fitness than upon his age. Industry can, however, take steps to maintain the health of its workers, and in any case, most types of work benefit more from accumulated experience than from mere speed or physical strength.

The Basic Problem

The above section has attempted to evaluate the older worker objectively, on the basis of available facts. The problem resolves itself into two parts, the basic and the immediate. The first part deals with the crucial issue—how to prolong the productive life of the worker who is now growing old on the job; the second part concerns the unemployed older worker, and how he can again be fitted into employment.

Adaptation of Changing Capabilities.—The basic problem is how to prevent a worker from becoming obsolete as he grows older, how to prolong his useful life and earning power. This involves an understanding of his changing capabilities. Periodic aptitude tests and measurements of his physical stamina would be necessary to the careful placement of the older worker, for, as time goes on, requirements for almost all types of work should change from those of physical strength and quickness of response to those in which reasoning, judgment and experience play a major role.

In one survey, many companies in diverse fields indicated that they have succeeded in prolonging the period of service of older employees by relieving them of the parts of their jobs which they cannot perform. In some cases, many older workers have been retained through the assignment of helpers who assist them with the more strenuous activities associated with their jobs. Other companies solved the problem by regrouping the duties of older employees. Improvement in production methods, particularly those involving labour-saving equipment, have permitted the retention of many older workers—conveyer systems to do away with heavy lifting, jib cranes, etc.³

One company was planning a special department for its older workers. Because of the increasing number of older-worker problem cases, its Research Department developed a new product which could be made by older workers and for which there was a potential market. The article was artistic in design, fairly light to handle, and required hand rather than machine operation. Only employees with thirty years' service with the company were to be eligible for transfer to this department.

Retraining, a Continuous Process.—Within each plant, retraining programs can enable the continual readjustment of the older worker. Such programs not only adapt the worker to jobs suitable to his changing capabilities, but also increase his alertness and do much to

³ "The Older Employee in Industry", Metropolitan Life Insurance Co.

retain his spontaneous interest and co-operation. In this way, his mental flexibility is maintained and any personality peculiarities are not so likely to develop.

Physical Fitness.—Medical programs can prevent premature aging and maintain physical and mental alertness. Periodic and thorough examinations will enable an illness to be discovered and treated before it becomes acute and saps the worker's strength. Working conditions should be carefully analysed from the standpoint of health, and the workers well informed concerning the factors which influence their health in their specific jobs—and given definite advice concerning corrective exercises, or suitable nutrition, use of stimulants and relaxation.

Psychological Effects of Prejudices.—The older worker often lacks self-confidence, especially in his ability to learn new things, chiefly because of the accepted and oft-repeated myth that "You cannot teach an old dog new tricks." This lack of self-confidence is sometimes reflected in officiousness and a pitiful hunger for dignity and appreciation—which in turn reflects a lack of understanding and an inept handling of the older worker problem on the part of management. The problem requires attention to the older workers as individuals, and avoidance of any attempts to deal with them in mass programs (this is necessary in any case because of the variation in functional age from one man to another). The older worker must be made to feel needed and wanted by means of the correction of some of the fictions and prejudices which form the basis of discrimination against him.

The Immediate Problem—The Unemployed Older Worker

There were 28,000 older workers registered on the files of the National Employment Service at July 31, 1947.⁴ They formed 28 per cent of total unplaced applicants at that date. Although serious everywhere, the situation is more acute in the Pacific region: many Prairie farmers have retired to British Columbia on what they thought was sufficient income, only to find now that rising prices

and falling interest rates have whittled away their funds, and that they must find jobs. Furthermore, primary industries support the bulk of employment in the Pacific region, and young husky workers are the chief requirement for the heavy jobs available.

The National Employment Service is prepared to advise employers on this problem. In each local office of the Employment Service, there are officers who are responsible for employer relations. These officers visit the employers in their district regularly. If asked, they are prepared to observe the types of jobs involved in any firm's operation and to suggest which repetitive types of work might be turned over to an older worker. Since a high percentage of the unemployed older workers are unskilled, it is possibly advisable to concentrate on locating "dead-end" jobs for them. However, in the case of an unemployed older worker who has a recognized skill or profession, the full resources of the Employment Service are made available to place him in employment suited to his capabilities. In other words, the "dead-end" jobs are considered to be suitable for those older workers who are unskilled and are unqualified for better positions. There is no attempt at placing skilled older workers in these jobs, however.

Employment Service officers emphasize that jobs for older workers need not offer promotion possibilities, but that steady and permanent employment is the great objective. Usually the untrained older worker with family responsibilities is chiefly interested in the *security* of employment, and consequently will accept work of a routine nature if it will provide a steady source of income. Younger workers often view such jobs as "stop-gap" employment, and labour turnover among them is heavy and expensive. This has been one effective selling point for the older workers. The Pacific region has reported definite progress with this approach, and the marked improvement in the employment of the "over 50" group of workers has not been merely seasonal in this area.

The human aspect of the problem is very important. It is easy to imagine the hurt to the morale of a man who was once the pivot of his family life, the centre of support, but who now sees himself a nuisance and a burden on the charity of his children. The psychological ill-effects are as serious as the financial, and, if prolonged, may result in a serious lack of self-confidence when he does find another job.

Counselling as an aid to placement.—Careful counselling of an unemployed older person is a means of discovering his greatest assets and enabling his placement in a suitable job.

⁴ The number of unplaced applicants registered at National Employment Service offices yields a higher estimate of unemployment than the unemployment estimate of the D.B.S. Labour Force Survey. The discrepancy may be due to a difference in the classification of casual workers and workers on temporary lay-off. D.B.S. classifies casual workers as employed if they worked at least one hour in the survey week. A substantial proportion of these may have registered with an employment office as seeking full-time work, in which case they would be included as unplaced applicants.

The late Dr. Lillian Martin, a pioneer in the field of intensive counselling in the United States, opened and operated an Old Age Centre in San Francisco which became a model for similar centres in other American cities.

Working on the theory that an unemployed person is not at his best or at least is on the defensive during the first interview, she advocated four interviews, each one week apart. The first three were to obtain information about the applicant's life history, his interests, and to discover his aptitudes through a Binet Simon intelligence test. On the basis of what Dr. Martin had learned, the fourth interview was a discussion of the applicant's goal and any adjustment he may require to fit himself for available openings.

While this method might seem to be slow and to take in subjects which people are prone to think "personal", the added knowledge according to Dr. Martin, will enable counsellors to approach prospective employers with more assurance, and so to effect many more placements. Apart from existing jobs in industry, a man might have a hobby which, with a few suggestions from the employment officer, might be turned into a profitable occupation or point the way to a new employment field.

Intensive counselling of older workers comes under the Special Placements section of the National Employment Service, and applies chiefly to those who need special training or re-training.

Jobs specially suitable for older workers.—While the purport of this article has been that the relative ability of older workers on the same type of work as younger workers has frequently been underestimated, it is also true that there are a number of jobs for which older workers are specially suited. Reports from companies co-operating in one survey indicated that there are numerous jobs common to almost every type of industry and widely accepted as suitable for older employees. Among these are the following:⁵

- Assemblers on light work
- Bench workers
- Blueprint machine operators
- Checkers
- Crib keepers
- Elevator operators
- Firemen
- Gatemen
- Groundkeepers
- Guides
- Inspectors
- Instructors
- Labourers on light work
- Messengers
- Minor clerks
- Oilers
- Packers
- Porters

- Reception clerks
- Repairers on light work
- Salvagers
- Stock or stores clerks
- Watchmen

Employers in specific industries named many jobs found only in their plants, which have been filled satisfactorily by older employees. For example, foundries report the following occupations:

- Bench core-maker
- Cleaner
- Filer
- Flask storage man
- Gangway man
- Ladle liner
- Matchmaker
- Moulder of small castings
- Pattern storage men
- Straightener of core wires

All industries require a certain number of night watchmen, time-keepers, guards and gatemen—which jobs seem almost made to order for older workers, as they demand men who are dependable, alert, and able to work alone.

Many older men, principally veterans, seem to turn to service work—since generally this work has been "saved" for the older ex-servicemen. Federal, provincial and municipal Departments of Public Works offer a great variety of jobs such as caring for public buildings and parks, elevator operators, janitors, clerks, confidential messengers, and protective services. Similar jobs appear in private business, and also others such as doormen, in theatres, service station attendants, hotel workers, truck drivers, routemen and helpers.

The shortage of female domestics has created many opportunities. In these jobs a man can work either alone or in a group doing cleaning and polishing in homes on an hourly basis. The pay at the present time is relatively good and the hours can be suited to the limitations of the worker. Janitor service, coupled with the cleaning of sidewalks in winter and caring for lawns in summer at a number of private homes in the same district, has also proven to be a profitable occupation for many in the older age group.

Mr. Arthur MacNamara, Deputy Minister of Labour, in a recent article on this problem,⁶ quotes the findings of two of the Department of Labour's Regional Advisory Boards representing employers, trade unions, and various government departments—which point out that the only immediate solution to the problem will be an increased effort by the National Employment Service to select and properly

⁵ "The Older Employee in Industry", Metropolitan Life Insurance Co.

⁶ Industrial Canada, August, 1947.

place older workers and a willingness on the part of employers to hire older men where practicable.

Mr. MacNamara ends with this statement: "Even now, 26 per cent of our population have reached middle age . . . this "over 45" group makes up about 33 per cent of our labour force. Hence, if we are to achieve a

balanced distribution of manpower, it is reasonable to assume that one out of every three jobs in the country should be for an older worker. It is criminal to speak of asking this group to subsist on a dole so long as they are capable of filling productive jobs. Surely the only answer for them is employment!"

Manufacturing Industries of Canada in 1945

REFLECTING the curtailment in production of war materials, the gross value of products manufactured in Canada fell nine per cent in 1945 from the all-time high reached in 1944, the aggregate being \$8,230,369,000 as compared with \$9,073,693,000 according to a bulletin published by the Dominion Bureau of Statistics entitled *The Manufacturing Industries of Canada, 1945*. The physical volume of production was also lower, and the number of employees showed a drop of 103,510 or 8.5 per cent accompanied by a decrease of \$183,848,000 or 9.1 per cent in salary and wage payments.

The tremendous increase in production attained by the Canadian manufacturing industries during the war years is indicated by the increases in some of the main factors of production between 1939 and the highest point attained during the war. For manufacturing as a whole, there was an increase of 161 per cent in the gross value of production, 162 per cent in the value added by manufacture, 89 per cent in the number of persons employed, and 175 per cent in the salaries and wages paid.

Industries producing munitions and equipment needed by the armed forces naturally were the first to feel the effects of the cessation of hostilities. Consequently, the chemicals and allied products group showed the greatest decline in production, as measured by employment, with 25.8 per cent fewer persons employed. This was followed by the iron and its products group with a drop of

21.9 per cent; non-ferrous metal products, 15.3 per cent; and miscellaneous industries, 2.3 per cent.

On the other hand, industries producing food, clothing and other consumer goods reported increases in production. Employment in the wood and paper products group was 5.1 per cent higher, followed by an increase of 4.3 per cent for animal products group; 3.5 per cent for vegetable products; 3.3 per cent for textiles, and 3.0 per cent for non-metallic mineral products.

Manufacturing establishments reporting in 1945 numbered 29,050 as compared with 28,483 in the preceding year. These plants furnished employment to 1,119,372 persons as compared with 1,222,882 in 1944, with salaries and wages amounting to \$1,845,773,000 as compared with \$2,029,621,000. Cost of materials used during the year was \$4,473,669,000 as against \$4,832,333,000, and the net value of products, \$3,564,316,000 as compared with \$4,015,776,000.

The manufacturing industries of Canada are concentrated largely in Ontario and Quebec. Ontario is the dominant manufacturing province of Canada. In 1945, with only 37 per cent of the total number of establishments reporting, it furnished employment to 46 per cent of the number of persons engaged in manufacturing and produced over 48 per cent of the entire output. Quebec with 31 per cent of the output ranks second, while British Columbia with eight per cent ranks third.

Labour Organization in Canada

TRADE Union membership in Canada, at the end of 1946, was almost 15 per cent higher than the previous record figure which was established in 1944.

According to the *Thirty-Sixth Annual Report on Labour Organization in Canada* for the year ending December 31, 1946, which will soon be released, there were approximately 831,000 members at December 31, 1946. This is an increase of about 121,000 or 17.0 per cent over the 711,000 recorded in 1945 and is more than twice the membership of 359,000 in 1939. Of an estimated 3,153,000 non-agricultural wage and salary workers, 14 years of age and over, 26.4 per cent were members of trade unions at the end of 1946.

The figures published by the Department are compiled from reports of national and international unions, independent local unions and central labour organizations. The Department also requests reports from local union branches, but as all locals do not reply, the figures obtained from this source are not as complete as those compiled from returns from union headquarters. Of a total of 4,635 local unions known to be in existence in Canada at the end of 1946, 3,846 or 83.0 per cent reported.

As shown in Table III below, labour organizations have been classified in thirteen

industrial groups. For several years the largest group has been "metal industries" which in 1946 included 19.8 per cent of Canadian trade union members. In 1943 when the production of material for the prosecution of the war at its height the members in this group numbered 199,487 but there were decreases of 6,151 and 45,427 in 1944 and 1945 respectively. During 1946 the number of members in this group increased from 147,909 to 164,630 and while this figure is still below that for 1943 it does reflect to some extent the reconversion of some war-time plants for the production of peace-time needs. The next largest group was "steam railway transportation" with approximately 135,000 members. All but two of the industrial groups showed increases in the number of members during 1946. The largest increase in any one group during the year was that of 27,700 in the wood and wood products group.

All of the thirteen industrial groups showed increases in the number of locals at the end of 1946.

Changes in the geographical distribution of trade union membership were comparatively small in 1946. Membership figures by province and city, being based on reports from local branches some of which do not always report, are not complete. The information

TABLE I—LOCAL UNIONS AND UNION MEMBERSHIP IN CANADA, 1911-1946

Year	Locals	Membership		Year	Locals	Membership	
		Number	Percentage change from previous year			Number	Percentage change from previous year

available indicates that 63.5 per cent of union membership was concentrated in the industrial provinces of Ontario and Quebec. Of the 4,635 locals known to be in existence at the end of 1946 about 58 per cent were in these two provinces. There were increases in the number of members reported in all provinces, the largest being that of 37,343 in Quebec where the membership increased almost 22 per cent to a total of 208,546. In

British Columbia, which had recorded the largest decrease in 1945, there was an increase of 15,643 or 18.7 per cent.

In 1946 there were 49 urban centres with 20 or more local branches as compared with 46 such centres in 1945. The reported memberships in these 49 centres increased from about 424,000 to almost 500,000. Montreal and Toronto, the two leading centres of industry and population, together had 604 or

TRADE UNION MEMBERSHIP IN CANADA*

1911 - 1946

13.0 per cent of all locals in Canada representing 188,000 or 26.8 per cent of total local union membership in 1946.

The Report contains a brief historical statement and shows the membership, names of the officers, and the affiliated unions of the Trades and Labour Congress of Canada, the Canadian Congress of Labour, the Canadian and Catholic Confederation of Labour and the Canadian Federation of Labour.

For each national and international union, the name and address of the secretary, the membership as well as the number and location of their branches, are shown. In the case of international unions, the names and addresses of Canadian officers are also given.

In addition there are included lists of provincial federations, local labour councils,

federations of unions in allied trades or industries, district union councils, and railroad brotherhood committees, with the names and addresses of their presidents and secretaries. Some notes are included concerning the nature, functions and interrelationships of the constituent parts of the framework of labour organizations. A section of the Report deals with the labour press.

The Report also gives some information concerning female membership in unions; benefits paid by headquarters of national and international unions on behalf of Canadian members; teachers' associations; and other organizations of public employees, including those employed by the Dominion, provincial and municipal governments.

TABLE II.—UNION MEMBERSHIP AND LOCAL UNIONS IN CANADA CLASSIFIED BY AFFILIATION

Affiliation	1945		1946	
	Number of Branches	Membership	Number of Branches	Membership
Trades and Labour Congress of Canada.....	2,394	312,391	2,536	356,121

* It is not possible to classify membership figures by industrial groups with a high degree of accuracy, since many unions have members whose employment may fall in one or more classifications.

Labour Income in Canada

THE Dominion Bureau of Statistics has begun to issue a series of monthly estimates of total labour income in Canada.¹

"Labour income" is defined to include all wages, salaries and supplementary remuneration for employees' services. All types of employment are included in the estimates.

The first set of figures has been published in a bulletin entitled *Wages, Salaries and Supplementary Labour Income in Canada by Months, January, 1946 to April, 1947*, which is available from the Bureau at a cost of 25 cents. This bulletin explains in detail the statistical methods used.

Expansion in Labour Income

In the period covered by the estimates labour income continued to expand, reflecting both rising employment and increasing average earnings. Taking the period as a whole, these two factors were of about equal importance in contributing to the rise in total labour income.

The total for the first four months of 1947 exceeded by about \$255 million, or 16 per cent that for the first four months in 1946. The totals were \$1,864 million and \$1,609 million, respectively. Increases were distributed through all industrial groups except agriculture which showed a decline.

The number of paid workers, as estimated by the Bureau's sampling unit, increased from 2.9 million in the week preceding February 23, 1946, to 3.2 million in the week preceding March 1, 1947. In about the same time average weekly earnings in the leading non-agricultural industries rose from \$32.53 to \$35.62. Average monthly wages of male workers in agriculture rose from \$96.27 on May 15, 1946 to \$103.96 on May 15, 1947.

The greatest proportionate increases in labour income were those in logging and construction, while the percentage increases in trade, transportation and communications were also above the average.

Over one-third of the increase between the two four-month periods ending in April, 1946 and 1947, was accounted for by wages and salaries in manufacturing where the percentage increase was just about the average. Mining, finance and services (including government) showed smaller gains.

¹ Annual estimates of total national income, including labour income, from 1938 to 1946, were published in a study summarized in the *LABOUR GAZETTE* for March, 1947 (p. 311).

Definition of Labour Income

Labour income includes all wages, salaries, and "supplementary labour income" received by Canadian residents. Salaries and wages include bonuses and commissions and are reckoned *before* deductions for income tax, employee contributions to unemployment insurance and employee contributions to other social security schemes. Supplementary labour income consists of all employers' expenditures, in cash or in kind, that can be regarded as payment for the employees' services. It includes the following types of payments:

- (a) Value of meals, accommodation, clothing, recreational facilities, medical aid, etc., supplied by employers.
- (b) Cash allowances for the above.
- (c) Employers' contributions to Unemployment Insurance and to Workmen's Compensation, except the portion estimated to cover medical aid and hospitalization.
- (d) Employers' contributions to pension fund and insurance schemes, as well as pensions paid by employers where no fund is set up.
- (e) Discounts on employee purchases of the employer's goods, free passes to transportation employees, free insurance to insurance company employees, and similar arrangements in regard to the employer's products.

Current estimates of supplementary labour income are incomplete owing to the lack of information on some of the above items, particularly those under (e).

Labour income is a component of "net national income at factor cost", which includes, in addition to labour income, the net income of unincorporated business (e.g. farmers, retail stores), corporate profits, interest and rent, and military pay and allowances.

In 1946 labour income amounted to about 55 per cent of net national income, the totals being estimated at \$5,112 million, and \$9,212 million, respectively.

The estimates of labour income are published in as much detail as their quality will permit. The possible error in some of the smaller sectors is such that separate figures for these sectors would be of no value, although the error is of little importance in relation to labour income as a whole.

April.....	24	180	22	119	100	24	469

(1) Includes Agricultural supplementary Labour Income.
 (2) Excludes Agricultural supplementary Labour Income.

Methods

The monthly estimates in the bulletin are based on the preliminary annual estimates for 1946.

For each industry group an index of the month-to-month change in salaries and wages is obtained and, where necessary, a monthly index of supplementary labour income. The estimated 1946 labour income for a given industry group is then divided by the 1946 twelve-month total of the corresponding index and the quotient is multiplied by the index for each month, to yield the estimated amount of labour income for that month. Each month the different industrial sectors of labour income computed in this way are added, to yield total labour income for that month.

In the major sectors the monthly indexes used are the indexes of "Aggregate Payrolls" published in the monthly bulletins *Employment and Payrolls*. These are generally based on the payrolls reported by employers having 15 or more employees for the last week in each month.

The use of these indexes has several significant implications. First, the month-to-month changes in the estimates are independent of differences in the number of working days per month. In other words the estimates are not really for calendar months but for periods of one-twelfth of a year. This means that comparisons of different "monthly" figures are more meaningful, for most purposes, than those based on calendar months would be.

Secondly, however, the estimates are inaccurate to the extent that the change in reported

payrolls between the last week of one month and that of another does not correspond to the change in the total payrolls in the corresponding "monthly" (1/12 of a year) periods. In practice this is a serious problem only in the month of December, where holidays are concentrated in the last week, and only in so far as daily or hourly rated employees are concerned. Clearly these holidays reduce earnings in the last week of December much more, proportionately, than they reduce earnings for the month of December as a whole. This must be borne in mind when looking at the figures in the table. At the next revision of these estimates a rough adjustment to improve the December figure will be introduced.

Annual bonuses and payments of retroactive wage increases are not taken into account in computing the monthly payroll indexes, and hence are not reflected in these estimates. As more information on these payments becomes available, adjustments will be made on the monthly estimates.

In a number of sectors where no suitable index of payrolls is available data from the quarterly Labour Force Survey are used to provide an index of the changing numbers of employees.

Indexes of the change in the value of board and lodging supplied by employers (other than agricultural) are obtained by multiplying suitable employment indexes by the index of retail food prices. Indexes of pensions and welfare expenditure are based on the trend of total payrolls in the sectors concerned.

Combines Investigation Act

Report of an Investigation into an Alleged Combine in the Manufacture and Sale of Dental Supplies in Canada

AN investigation into an alleged combine in the manufacture and sale of dental supplies in Canada is the subject of a report made to the Minister of Justice on July 28, 1947, by F. A. McGregor, Commissioner of the Combines Investigation Act. This completed the first formal investigation under the Combines Investigation Act since the end of the war period and is the first report to be published since the administration of the Act was transferred from the Minister of Labour to the Minister of Justice in October, 1945.

The conclusion reached by the Commissioner as the result of inquiries extending over several months is that "a combine exists in the distribution and sale of dental supplies in Canada, within the meaning of the Combines Investigation Act, and that all members of the Canadian Dental Trade Association have been parties and privy to this combine and have knowingly assisted in its formation or operation."

The dealer members of the Canadian Dental Trade Association are stated to be The Ash-Temple Company, Dental Company of Canada, Dominion Dental Company and National Refining Company, with head offices in Toronto, the Maritime Dental Supply, of Halifax, British Columbia Dental Supply, of Vancouver, and Paterson & Paterson Inc., of Montreal. In addition the following manufacturer members are listed: the L. D. Caulk Company, the S. S. White Company, Goldsmith Brothers Smelting and Refining Company, Novocol Chemical Manufacturing Company, and Equipment Manufacturing Company, all of Toronto, and Cook-Waite Laboratories Inc., and Williams Gold Refining Company, both of Fort Erie.

Hearings in the investigation were held in Toronto, Ottawa and Montreal before A. S. Whiteley, Deputy Commissioner, during November and December, 1946, and argument was heard by the Commissioner during hearings in Ottawa in February, 1947. Commission counsel during the inquiry was Peter Wright of Toronto.

In reviewing the activities of the Canadian Dental Trade Association the Commissioner states in his conclusion:

The evidence reveals that the practices established by the Canadian Dental Trade Association and followed by its members have operated to eliminate price competition

throughout almost the entire trade in dental supplies across Canada. These practices have involved the establishment of a system of price-fixing through a Universal Price Book and otherwise, which results in common prices on the same goods being charged by all members of the Association. The system of common prices has been kept in force by such practices as agreed quantity rates, uniform classification of customers, common rates of discounts to such agreed classes of customers and uniform terms of sale. The arrangements have been supported by a common policy among many manufacturing members of the American Dental Trade Association, of which the Canadian Dental Trade Association is a part, to make their products available only to members of the Association.

Nearly all dental supplies used in Canada are imported from the United States. The dealer members of the association supplied eighty-seven per cent of all dental supplies distributed in Canada in 1945. According to the report the members of C.D.T.A. agree to adhere to the prices and terms contained in a price book published by the association. Virtually all dental supplies sold are listed in this book, and indirect price concessions are guarded against by the provision of agreed discounts, turn-in values and special prices for western Canada.

Supplies are priced, according to the report, by the addition of percentages derived from a formula decided upon by all the association members. By means of this formula Canadian dealers agree on a gross margin of about two-thirds of the cost of their goods. They also agree on a similar margin to be added to such outlays as those for customs duties and taxes. As a result Canadian prices are greatly in excess of American prices and are higher than they would be in a competitive market. Prices of other goods, it is alleged, are fixed arbitrarily by agreement among the members.

Specific comparisons between Canadian and American prices are cited in the case of dental operating chairs and acrylics (the plastic material used in making dental plates). In the case of one dental chair the American price in 1946 was \$695 as against \$957 in Canada. Acrylics imported from the United States were sold in Canada for \$35 per ten-unit package in 1940, and were gradually reduced to \$15.50 in 1944, at which price they remained. An almost identical product is now sold in the United Kingdom for £1 or \$4.03 but it has not

been made available in Canada. The bearing of Canadian customs duties on Canadian prices is discussed in one chapter of the report.

An essential condition of membership in the Canadian association is prior membership in the American association. According to the report, no new Canadian dealer has been admitted since 1928. This restriction has prevented the growth of independent dealers, whose sales amount to only 13 per cent of the total Canadian business.

Special attention is paid in the report to the fixing of resale prices by joint action of manufacturers and dealers. On this the Commissioner comments:

Action by a manufacturer in requiring all dealers to sell his products at fixed re-sale prices (even though there be no agreement with other manufacturers on the re-sale price policy) may be just as effective in eliminating dealer competition in the sale of that product as joint action by the dealers themselves to achieve the same end. It may be even more effective because the manufacturer has the power to cut off the supply of important commodities from any dealer who does not maintain the fixed prices. When all the manufacturers, or virtually all, adopt the same policy the effect is to make rigid the dealers' margins on all these products and to prevent any price competition amongst them. When the dealers organize to bring pressure on manufacturers to adopt such a policy, and when that organization assists in the enforcement of such a policy, the only element of competition left is "mere salesmanship" or some other form of competition which means higher costs and therefore higher prices. And when, furthermore, the principal manufacturers unite with all the dealers in an asso-

ciation designed and operated to fix and maintain prices and to prevent other dealers from participating in the business, the most complete type of suppression of competition is the inevitable result.

The report states that all these restrictions are present in the Canadian Dental Trade Association, and that price flexibility, "an essential characteristic of a really competitive system," has virtually disappeared. It adds:

The protection which price competition is supposed to afford to the ultimate buyers is denied them. So long as this type of control continues, the market is not a free market but a sellers' market, and the program is one of restriction rather than of freedom.

Copies of the report have been remitted to the provincial attorneys general. Announcement has not yet been made as to proceedings which may be instituted in view of the conditions disclosed as a result of the investigation.

Following the report on *Canada and International Cartels*, which contained a number of recommendations for the more effective administration of the Combines Investigation Act, the staff of the Combines Investigation Commission has been increased. The amendments made to the Act during the 1946 session of Parliament place greater responsibility upon the Commission to conduct inquiries whenever there are indications of the development of monopolistic conditions. At the present time a number of inquiries into the supply and distribution of certain lines of consumer goods are being actively pursued.

New Publications on Provincial Labour Standards

THREE new publications have recently been issued in mimeographed form: (1) *Workmen's Compensation in Canada, a Comparison of Provincial Laws*; (2) *Provincial Labour Standards concerning Child Labour, Holidays, Hours of Work, Minimum Wages, and Workmen's Compensation*; and (3) *International Labour Conventions and Canadian Legislation concerning Young Persons*. Copies may be obtained from the Legislation Branch, Department of Labour.

Workmen's Compensation in Canada

The 1947 edition of *Workmen's Compensation in Canada, a Comparison of Provincial Laws*, which has been issued annually for many years, has some 30 pages, including an appendix, in which are set out the benefits payable to dependants in case of the workman's death and those payable for temporary

or permanent disability. Also listed are the occupational diseases for which compensation is paid in each province.

The points dealt with, as indicated by paragraph headings, include Workmen's Compensation Boards, Cost of Administration, Scope of Laws, Risks Covered, Waiting Period, Medical Aid, First Aid, Rehabilitation, Accidents Outside the Province, Non-Resident Workmen and Dependants, Security for Payment of Compensation, Accident Prevention and International Labour Conventions and Recommendations.

The most important amendments in 1947 are noted. Ontario, the first Province to take such action, has extended the Act's scope to include not only certain specified diseases, but also to cover any disease peculiar to any industrial process or occupation.

The monthly benefit in fatal cases was raised in Ontario, Quebec and Saskatchewan. Ontario increased the benefit to a widow or invalid widower from \$45 to \$50, and Quebec and Saskatchewan from \$40 to \$45. Ontario increased also the amount payable monthly for each child from \$10 to \$12; in case of an orphan child, from \$15 to \$20.

In Ontario, in case of total and permanent incapacity, it is now provided that, instead of a minimum of \$12.50 a week, a minimum monthly payment of \$100 is to be made, or the average earnings if they are less than \$100.

International Labour Conventions and Juvenile Employment Laws

A comparison of Canadian legislation fixing a minimum age for employment with the standards established by International Labour Conventions is made possible by the publication entitled *International Labour Conventions and Canadian Legislation concerning Young Persons*, of which Part I, *Minimum Age for Employment*, was issued in July, 1947.

Four International Labour Conventions fix 15 as the minimum age for employment on ocean-going vessels, 14 in agriculture, 15 in industrial undertakings, i.e. mines, factories, construction and transport, and 15 in other occupations. The Dominion Government gave effect in 1926 to the Sea Convention fixing 14 as the minimum age, but this Convention has been revised to raise the age to 15. Under the Convention for non-industrial occupations, a child of 13 may be employed on light work, not harmful to its health, development or school progress, but no child under 14 may be employed more than two hours a day, and may not be employed on Sundays, public holidays, or from 8 p.m. to 8 a.m. A higher age than 15 must be fixed for employment in industrial and in non-industrial undertakings which is dangerous to life, health or morals, including selling on the streets and in public places.

No Canadian Province, except Prince Edward Island, has legislation broad enough to comply with any of these Conventions. The Prince Edward Island *Minimum Age for Employment (International Labour Convention) Act*, 1945, gives full effect to the Convention fixing a minimum age for industrial undertakings. There is no other provincial legislation fixing a minimum age for

employment in construction or transport, and "factory" as defined in some provinces is not broad enough to cover all manufacturing establishments. Some laws permit exceptions to be made. The higher ages fixed in almost all Provinces for mines, a dangerous occupation, comply with the Convention in this respect but, except in Quebec, there is no regulation of other dangerous trades by fixing a higher minimum age.

The legislation concerning non-industrial undertakings is not wide enough; it usually applies only to shops, sometimes to hotels and restaurants and certain places of amusement, rarely to other kinds of establishment. In no case, except possibly in Manitoba to a limited extent, does it regulate the employment of school children.

Provincial Labour Standards

The 1947 edition of *Provincial Labour Standards* shows, in tabular form, the legislative standards governing child labour, holidays, hours of work, minimum wages and workmen's compensation benefits. For the first time a section has been added showing the public holidays ensured to workers and the provisions requiring payment for such holidays. Manitoba has joined Alberta, British Columbia, Ontario, Quebec and Saskatchewan, in providing an annual holiday with pay.

The only important change indicated in hours of work is in Saskatchewan where hours are limited to eight in a day and 44 in a week unless time and one-half is paid for overtime beyond those limits. As before, however, women in Saskatchewan factories are restricted to a 48-hour week unless permission is given for a limited amount of overtime.

To the table on *Minimum Rates for Experienced Workers* have been added one on *Rates for Inexperienced Workers* and one showing *Overtime Rates* as fixed by the *Minimum Wage Orders*. Higher rates in Alberta, British Columbia and Manitoba are shown in the 1947 table.

Changes indicated in the *Workmen's Compensation* tables are similar to those noted above in connection with *Workmen's Compensation in Canada, a Comparison of Provincial Laws*.

Admission Policies of Labour Unions in United States

AN ARTICLE by Professor Clyde W. Summers of the University of Toledo on admission policies of labour unions in the United States has been published in the November, 1946 issue of the *Quarterly Journal of Economics*, a publication of Harvard University. Based upon an analysis of admission provisions in the constitutions of 185 international unions, the article finds that only a small minority of unions engage in exclusionary practices of any kind and that in the great majority of unions workers who wish to join are freely admitted.

What exclusionary policies do exist, the article states, are restricted mainly to the skilled crafts and railroad unions and seldom appear in industrial unions. They are far more prevalent in the "older and well entrenched unions than in the new and less secure ones".

The principal grounds for exclusion, where such provisions exist in union constitutions or by-laws, are race, citizenship, political beliefs, creed, sex and closed membership.

"Many unions have a strong national policy against discrimination because of race. All of the CIO unions have admitted Negroes on an equal basis and have worked hard to break down racial prejudices. Both the United Mine Workers and the Ladies' Garment Workers, (AFL affiliates) have used pressure to compel locals to admit Negroes."

Although exclusion on racial grounds is not typical of the labour movement, the relatively small amount of discrimination is sufficient to merit serious consideration because of its uneven distribution, the article states. Discrimination against Negroes is concentrated in two main areas. Railroad unions with but two exceptions bar Negroes from membership as do a large portion of the skilled craft unions. "... These are some of the most powerful unions . . . and control many of the higher paying and more desirable lines of endeavour."

Over 30 international unions, with a total membership of nearly 4,000,000 members have constitutional provisions denying the right to join because of political affiliations or beliefs. Most of these provisions make membership in a forbidden organization the test. "In local union practice, these paper provis-

ions are very rarely implemented," since such affiliations or beliefs are seldom known and extremely difficult to discover.

In contrast, 29 unions protect the right to join by constitutional provisions which prohibit locals from discriminating on political grounds.

Exclusion because of creed exists only in two international unions.

Traditional exclusion of women from membership in the trade union is gradually being reduced, the article states. Only eight unions have been found to have constitutional provisions excluding women and all but three of these are railroad unions.

However the article states that, "it is believed that the exclusion of women is more widespread than the constitutional provisions would indicate, especially in the skilled trades".

Workers may be denied the right to join because the union has closed its membership books and refuses to accept any new members or accepts only a few favoured ones, such as relatives of members. Only six internationals have constitutional provisions relating to this practice the article reports. In the other unions surveyed the control of this practice lies exclusively in the local union. The extent of this practice among the 75,000 local unions is difficult to determine for no systematic study has yet been made, the article states. It holds that closed unions are generally more prevalent in the skilled than unskilled trades and are limited mainly to the highly unionized trades. Here again the exclusion, through the closed union device, is described as the exception rather than the rule.

Exorbitant initiation fees, intended solely to exclude, are sometimes used by locals as a bar to membership. However, a study of 300 locals revealed " . . . that relatively few charge exorbitant fees and not many workers were affected. In general, the fees in the CIO are considerably lower than those in the AFL".

Fifty-one unions have constitutional provisions regulating apprenticeship but only 21 of these purport to require apprenticeship or experience for admission to membership. Competency tests, licensing laws and permit cards, similarly, do not loom large as exclusionary devices and are found essentially within craft unions.

Two-Shift System Recommended in United Kingdom

Committee Studies Economic Need and Social Consequences of Double Day-Shifts

A WIDER use of the double day-shift system in industry has been recommended by a Committee under the chairmanship of Professor J. R. Brierly, C.B.E., J.P., D.C.L., LL.M., which was appointed in March, 1945, by the British Government to consider the economic need and the social consequences of the double day-shift system in factories and the changes which would be necessary in the law to facilitate its wider adoption. The Report is summarized in the *Ministry of Labour Gazette* for July, 1947.

The Factories Act, 1937, forbids the employment of women and of young persons between 16 and 18 years of age between the hours of 8 p.m. and 7 a.m. and of persons under 16 between 6 p.m. and 7 a.m., but when the limited overtime permitted by the Act is worked by women and young persons over 16, the prohibited period of employment begins at 9 p.m. except on Saturday when it always begins at 1 p.m.

As regards shift-working, boys over 16 may be employed on shifts in certain continuous processes: iron smelting, manufacture of iron, steel or tin plate, galvanizing of sheetmetal or wire, paper-making, glass manufacture, and continuous processes in connection with the smelting of ores, metal rolling, forges or the manufacture of metal tubes or rods, or in other work specified by the Secretary of State. Shift arrangements are permitted, too, in industries dealing with certain perishable commodities. No changes in these two exceptions to the general statutory prohibition of night work by women and young persons were proposed by the Committee.

Amendments were recommended, however, in the Employment of Women and Young Persons Act, 1936. This Act, replacing a somewhat similar provision of 1920, permits these persons to be employed on a system of two shifts of not more than an average of eight hours each in a day, the shifts to fall between the hours of 6 a.m. and 10 p.m. on any week-day except Saturday, and on Saturday between 6 a.m. and 2 p.m. But the Act requires that, except in the case of a new factory intending to operate permanently on a two-shift system employing women and young persons, the work-people must be consulted before the system is introduced, and a majority of the work-people concerned must have approved by secret ballot the granting of the employer's

application for permission to operate a two-shift system.

Economic Need for Shift System

The Committee considered the economic need for a shift system in industry (a) to meet exceptional circumstances; (b) as a normal and permanent feature of industry; and (c) to meet temporary difficulties in the immediate post-war period.

As the advantages of such a system in exceptional circumstances were considered fully by the Departmental Committee on the Employment of Women and Young Persons on the Two-Shift System which reported in 1935, the Brierly Committee considered it unnecessary to give detailed consideration to this aspect.

The need for the system as a normal and permanent feature of industrial organization was the subject of considerable evidence received from the Board of Trade and industrial representatives. The increased mechanization in industry results in many cases, the Committee observes, in an increase in capital charges, causing the manufacturer to wish to increase the output of his machinery by using it for longer hours. The general tendency towards a reduction in the hours of work of the individual worker gives the manufacturer an additional reason for the adoption of a double day-shift system. The Committee considered, too, that under this system plant and machinery could be fully utilized before they became out-of-date.

As regards the immediate post-war period, the Committee considered that shift-working may assist to make up leeway in meeting the accumulated demand for goods.

Social Consequences

As to the social consequences of the system, the Committee believed that, if there was a real economic need for it, the system would be a factor influencing favourably the standard of living and the leisure which workers would be able to enjoy. It would make possible a more general reduction in working hours for individual workers than would otherwise be practical.

As regards those features of the system which might be thought in some circumstances to have an unfavourable effect on health, the Committee failed to find any positive evidence, and they pointed out

certain compensating advantages, such as shorter hours and additional time at week-ends. The features sometimes considered unfavourable included the early start, which might result in workers not having a substantial breakfast, the late finish, which might cut down the hours of sleep of those in the afternoon shift, and the change-over from one shift to another with the resulting change in sleeping and eating habits, which might affect the nervous and digestive systems.

The additional difficulties imposed on a housewife by the shift system were emphasized by the Committee, and also the risk that workers might, to a considerable extent, be cut off from normal social life. Great importance was attached by the Committee to this latter difficulty, and it was recommended that efforts should be made to offset it and, as regards education, that persons wishing to continue their studies should not be prevented from doing so by the fact that they were working on shifts.

Recommendations of Committee

In conclusion, the Committee pointed out that the evidence proved, in their opinion, that the wider use of the system of double day-shifts was undoubtedly capable of making an important contribution to the economic well-being of the country, but that the evidence showed, too, that the system involved some measure of segregation and dislocation of family life and other social and educational disadvantages for the workers. The success of the system, in the Committee's opinion, will depend on the willingness of individual employers to scrutinize closely the economic and other advantages which might accrue in particular cases and on the workers being convinced that its social inconveniences to them will be offset as far as possible by compensating benefits.

The Committee's chief recommendations in regard to the law are as follows:—

- (a) that individual factories or departments should continue to require authorization before women and young persons may be employed on a double day-shift system;
- (b) that double day-shift work by persons under 18 should, in general, be prohibited but that some latitude should be allowed for not more than two years;
- (c) that normally the hours of the two shifts should fall between 7 a.m. and 11 p.m., instead of 6 a.m. and 10 p.m. as at present;
- (d) that there should normally be no Saturday work, but provision should be made for a limited amount of overtime on Saturday mornings;
- (e) that where it is proposed to institute a double day-shift system, the workers concerned should be given a reasonably full account of the reasons for the proposal;

- (f) that the ballot should be retained as a means of consulting the workpeople except, as at present, in the case of a new factory;
- (g) that where a ballot is required, a majority of those *actually voting* should be required before an application for double day-shift working by women and young persons is granted, instead of a majority of the workers concerned, whether voting or not;
- (h) that special attention should be given to the welfare and transport arrangements for shift workers.

Three members of the Committee dissented on two points: the subject of the ballot and hours of work. As regards the use of the ballot, there was evidence that it was unsatisfactory, and the three members suggest that a proposal for a change-over should be dealt with by the works management and the workers' representatives, or, if agreement cannot be reached, by the normal negotiating machinery. As an alternative, they suggest that the Minister of Labour and National Service should consult the Government Department concerned from the production aspect, and if a shift system is considered desirable, that the onus of attracting workpeople should be on the management.

As regards hours of work, the minority consider that the reduction of hours proposed would have far-reaching economic disadvantages: (1) a decrease in production per man-hour; (2) increased wages per hour; (3) inability to compete with goods produced in foreign countries working longer hours and at lower rates; and (4) the tendency to curtail re-equipment. They foresee difficulties with regard to Saturday working by shift workers in view of the movement towards a 45-hour, five-day week for day-workers. They recommend that double day-shifts should be permitted between 6 a.m. and 11 p.m.

Attitude of Government

As to the acceptance of the Report by the Government, the Minister of Labour stated on July 4 in the House of Commons that the Government agreed that if the standard of living was to be maintained and improved without widespread increases in the working hours of individuals, there would have to be much more double day-shift working. The Government agreed, too, that the workers would not accept the system unless its social inconveniences are offset as far as possible by compensating benefits. The Government is to consult the National Joint Advisory Council concerning the legislation which should be enacted to permit greater use of two day-shifts and also on the morning and evening time limits which should be imposed.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles concerning proceedings under the *Wartime Labour Relations Regulations, P.C. 1003*, and under the *Conciliation and Labour Act*.

During the war and its aftermath, the Dominion War-time Labour Relations Regulations (P.C. 1003) of February 13, 1944, (which suspended the Industrial Disputes Investigation Act, enacted first in 1907) have required employers to negotiate with the representatives of their employees and provided machinery for the settlement of disputes.

At the present time the Regulations apply only to industries within the legislative authority of Parliament, including navigation and shipping, lines of steam or other ships, railways, airlines, canals, telegraph, telephone and radio communication, ferries, and works situated in a province but which have been or may be declared by Parliament to be for the general advantage of Canada or two or more provinces. Jurisdiction over war industries and industries within the scope of certain provinces which entered into wartime agreements with the Dominion, has now reverted to the provinces. (A summary of the present position with respect to labour relations legislation in Canada appears in the July issue of the *LABOUR GAZETTE*, pp. 940-943.)

The Regulations, which were issued under the authority of the War Measures Act, are continued in effect under the continuation of Transitional Measures Act, 1947. A bill incorporating many of the features of the Regulations, with modifications and additions, was introduced in the House of Commons on June 17, 1947, but was allowed to stand over until the next session of Parliament (L.G., July, 1947, p. 923, Aug., p. 1102).

The Regulations are administered by the *War-time Labour Relations Board (National)* in respect of those provisions relating to:

the certification of bargaining representatives, the intervention of the Board for the purpose of obtaining conciliation services from the Minister of Labour, the establishment of procedures for the final settlement of disputes concerning the interpretation or violation of collective agreements, and the institution of prosecution proceedings.

The provisions of the Regulations relating to conciliation services are under the administration of the Minister of Labour and are provided to parties desiring to negotiate agreements through the formal intervention of the Board.

The Board, with the approval of the Minister of Labour, has adopted rules or regulations which govern procedure in making the various types of applications invoking the provisions of the Regulations and the services of the Board. Copies of these procedural regulations and of the *War-time Labour Relations Regulations, P.C. 1003*, may be obtained from the Department of Labour, Ottawa.

Proceedings under the Regulations are here described in two separate articles. The first deals with applications made to the Board for the certification of bargaining representatives and other services, and records the decisions reached in such matters; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also provided through the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act. This Act empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together and to appoint a conciliator or arbitrator when requested by the parties concerned.

Applications for Certification Under War-time Labour Relations Regulations

THE War-time Labour Relations Board (National) met for two days during the month of August. During the month the Board received eleven applications (one of

which was withdrawn during the month), held two hearings, issued eleven certificates designating bargaining representatives, rejected six applications, ordered three representation

votes, allowed the withdrawal of sixteen applications and issued Reasons for Judgment on two applications for leave to prosecute which had been refused.

Applications for Certification Granted

(1) *International Association of Machinists* and certain of its officers for the personnel employed by *Canadian Air Express Limited, Montreal, P.Q.*, in the maintenance and servicing of aeroplanes at Montreal Airport (Dorval) in the Operations and Maintenance Departments of the company in the classifications of senior operations agent, senior agent, agent, commissary clerk, stock clerk, aircraft polisher, senior radio mechanic, mechanic A and E, mechanic's helper, junior mechanic and radio mechanic. Those excluded from the bargaining unit were persons employed in the classifications of station manager, assistant station manager, agent-in-charge, chief stock clerk, stenographer, foremen and senior mechanic-in-charge.*

(2) *International Association of Machinists* and certain of its officers for the personnel employed by *Canadian Air Express Limited, Montreal, P.Q.*, in the maintenance and servicing of aeroplanes at Ottawa Airport in the Operations and Maintenance Departments of the company in the classifications of senior operations agent, senior agent, agent, commissary clerk, stock clerk, aircraft polisher, senior radio mechanic, mechanic A and E, mechanic's helper, junior mechanic and radio mechanic. Those excluded from the bargaining unit were persons employed in the classifications of station manager, assistant station manager, agent-in-charge, chief stock clerk, stenographer, foremen and senior mechanic-in-charge.*

(3) *Canadian Seamen's Union* and certain of its officers for the unlicensed personnel employed by *Familoil Steamships Limited, Montreal, P.Q.*, on the SS. *Mount Maxwell*. The chief steward, steward-purser, chief cook, supernumerary and stewardess were excluded from the bargaining unit.*

(4) *Canadian Seamen's Union* and certain of its officers for the unlicensed personnel employed by *Kent Line Limited, Saint John, N.B.*, on its vessel the *Reston Kent*.*

(5) *National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for marine engineers employed by *Britamerican Limited, Vancouver, B.C.*, on the M.S. *Britamerican*. The chief engineer was excluded from the bargaining unit.*

(6) *National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for marine engineers employed by the

Shell Oil Company of British Columbia Limited, Vancouver, B.C., aboard the motor vessel *Western Shell*. The chief engineer was excluded from the bargaining unit.*

(7) *National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for engineer officers employed by *Coal Carriers Corporation Limited, Brockville, Ont.*, on the SS. *Coalfax*. The chief engineer was excluded from the bargaining unit.*

(8) *International Brotherhood of Electrical Workers, Local Union B 1405*, and certain of its officers for the employees of the *Arctic Radio Corporation, Flin Flon, Man.*, employed in the classifications of announcer operator, engineer, news and feature man, announcer operator-bookkeeper, continuity editor, relief announcer, stenographer and traffic clerk. The manager sports caster and janitor were excluded from the bargaining unit.**

(9) *International Longshoremen's and Warehousemen's Union Local No. 508* and certain of its officers for deepsea longshoremen employed by the *Empire Stevedoring Company Limited, Vancouver, B.C.*, in the ports of Chemainus, Crofton, Nanaimo and Ladysmith, B.C.***

(10) *International Longshoremen's and Warehousemen's Union Local No. 508* and certain of its officers for deepsea longshoremen employed by the *Canadian Stevedoring Company Limited, Vancouver, B.C.* in the ports of Chemainus, Crofton, Nanaimo and Ladysmith, B.C.***

(11) *Hull City Transport Employees' Syndicate* and certain of its officers for chauffeurs and garage employees in the employ of *Hull City Transport Limited, Hull, P.Q.* Excluded from the bargaining unit were the superintendents, inspectors, despatchers and office employees.***

Representation Votes Ordered

(1) *Canadian Brotherhood of Railway Employees and Other Transport Workers*, applicants, and *Toronto Terminals Railway Company, Toronto, Ont.* (L.G., August, 1947, p. 1133.) Following an investigation of the application, the Board ordered a vote of certain restaurant employees, including part-time workers, employed in the Restaurant Department of the Toronto Terminals Railway Company, Toronto, Ont. Mr. H. Perkins,

* Following an investigation of the application.

** Following an investigation of the application and a representation vote.

*** Following an investigation of the application, a public hearing and a representation vote.

Industrial Relations Officer Dominion Department of Labour, Toronto, was appointed Returning Officer.

(2) *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees*, applicants, and *Canadian Pacific Railway Company, Vancouver, B.C.* (L.G., August, 1947, p. 1134.) Following an investigation of the application, the Board ordered a representation vote among three classes of red cap porters, namely, permanent employees, regular free lance porters and temporary free lance porters employed by the Canadian Pacific Railway Company, Vancouver, B.C. The ballots of each of the three classes of red cap porters are to be segregated. Mr. G. R. Currie, Industrial Relations Officer, Vancouver, was appointed Returning Officer.

(3) *National Association of Marine Engineers of Canada, Inc.*, applicants, and *Westward Shipping Limited, Vancouver, B.C.* (L.G., September, 1947, p. 1273.) Following an investigation of the application the Board ordered a representation vote among the marine engineers employed by the company on the vessels *M.S. Standard Service* and *M.S. B.C. Standard*. The chief engineers are excluded from the list of eligible voters. Mr. G. R. Currie, Industrial Relations Officer, Vancouver, was appointed Returning Officer.

Applications for Certification Rejected

(1) *Canadian Seamen's Union and Inter-Island Steamships Company, Montreal, P.Q.* (L.G., May, 1947, p. 661.) Following an investigation and a hearing of the parties, the Board rejected the application for the reason that the union failed to obtain the support of a majority of the employees affected in a representation vote ordered by the Board.

(2) *Canadian Seamen's Union and Caribbean Steamship Company, Limited, Montreal, P.Q.* (L.G., May, 1947, p. 661.) Following an investigation and a hearing of the parties, the Board rejected the application for the reason that the union failed to obtain the support of a majority of the employees affected in a representation vote ordered by the Board.

(3) *Canadian Brotherhood of Railway Employees and Other Transport Workers and Hull City Transport Limited, Hull, P.Q.* (L.G., July, 1947, p. 959.) Following an investigation and a hearing of the parties the Board rejected the application for the reason that it was not supported by a majority of the employees concerned.

(4) *Canadian Seamen's Union and Canadian Transport Company, Vancouver, B.C.* (L.G., July, 1947, p. 959.) Following an investiga-

tion the Board rejected the application for the reason that it did not have the support of the majority of the employees affected.

(5) *Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 199, and Canadian National Telegraphs, Audit Department, Canadian National Railways, Toronto, Ont.* (L.G., July, 1947, p. 959.) Following an investigation and a hearing of the parties, the Board rejected the application for the reason that the bargaining unit applied for was inappropriate.

(6) *National Association of Marine Engineers of Canada, Inc. and North American Transports Limited, Montreal, P.Q.* (L.G., August, 1947, p. 1134.) Following an investigation the Board rejected the application for the reason that the North American Transports Limited no longer had any employees aboard the vessel *M.V. Huascaran* which had been sold to another company.

Applications Withdrawn

(1) *Canadian Seamen's Union and Shipping Limited, Montreal, P.Q.* (L.G., June, 1947, p. 795.) On the request of the National President of the applicant union, the application was withdrawn.

(2) *Canadian Seamen's Union and Pelee Shipping Company, St. Thomas, Ont.* (L.G., August, 1947, p. 1133.) The application for certification of bargaining representatives was withdrawn on the request of the vice-president of the Canadian Seamen's Union.

(3) *Canadian Seamen's Union and Canada Steamship Lines, Limited, Montreal, P.Q.* (L.G., August, 1947, p. 1133.) On the request of the union's solicitor, the application for certification of bargaining representatives was withdrawn.

(4) *Canadian Seamen's Union and Paterson Steamships, Limited, Fort William, Ont.* (L.G., August, 1947, p. 1133.) The application for certification of bargaining representatives was withdrawn on the request of the National Secretary of the union.

(5) *Canadian Seamen's Union and Upper Lakes and St. Lawrence Transportation Company, Limited, Toronto, Ont.* (L.G., August, 1947, p. 1133.) On the request of the National Secretary of the union, the application for certification was withdrawn.

(6) *Canadian Seamen's Union and Quebec and Ontario Transportation Company, Ltd., Montreal, P.Q.* (L.G., August, 1947, p. 1133.) The application for certification of bargaining representatives was withdrawn on the request of the solicitor for the union.

(7) *Canadian Seamen's Union and North-west Steamships Limited, Toronto, Ont.* (L.G., August, 1947, p. 1133.) On the request of the National Secretary of the union, the application for certification of bargaining representatives was withdrawn.

(8) *Canadian Seamen's Union and National Sand and Material Company, Limited, Toronto, Ont.* (L.G., August, 1947, p. 1133.) The application for certification of bargaining representatives was withdrawn on the request of the secretary-treasurer of the union.

(9) *Canadian Seamen's Union and Hindman Transportation Company, Limited, Owen Sound, Ont.* (L.G., August, 1947, p. 1133.) On the request of the National Secretary of the union, the application for certification of bargaining representatives was withdrawn.

(10) *Canadian Seamen's Union and Lloyd Tankers, Limited, Toronto, Ont.* (L.G., August, 1947, p. 1134.) On the request of the National Secretary of the Canadian Seamen's Union, the application for certification of bargaining representatives was withdrawn.

(11) *Canadian Seamen's Union and Lake Erie Navigation Company, Limited, Walkerville, Ont.* (L.G., August, 1947, p. 1134.) The application for certification of bargaining representatives was withdrawn on the request of the National Secretary of the Union.

(12) *Canadian Seamen's Union and Great Lakes Lumber and Shipping Limited, Fort William, Ont.* (L.G., August, 1947, p. 1134.) On the request of the National Secretary of the union, the application for certification of bargaining representatives was withdrawn.

(13) *Canadian Seamen's Union and Algoma Central Steamship Company, Sault Ste. Marie, Ont.* (L.G., August, 1947, p. 1134.) The application for certification of bargaining representatives was withdrawn on the request of the National Secretary of the Union.

(14) *Canadian Seamen's Union and Abitibi Navigation Company Limited, Toronto, Ont.* (L.G., August, 1947, p. 1134.) On the request of the National Secretary of the Union, the application for certification of bargaining representatives was withdrawn.

(15) *National Association of Marine Engineers of Canada, Inc. and McColl-Frontenac Oil Company, Limited, Toronto, Ont.* (L.G., September, 1947, p. 1273.) On the request of the secretary-treasurer and business agent for the Great Lakes District, the application for certification of bargaining representatives was withdrawn.

(16) *Canadian Seamen's Union and Coal Carriers Corporation, Limited, Brockville, Ont.* (L.G., August, 1947, p. 1134.) On the

request of counsel for the union, the application for certification of bargaining representatives was withdrawn.

Applications for Certification Received During the month of August, 1947

(1) *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees* on behalf of red cap porters on eastern lines of the *Canadian Pacific Railway Company, Montreal, P.Q.*

(2) *National Association of Marine Engineers of Canada, Inc.* on behalf of marine engineers on board *M.S. Standard Service* and *M.S. B.C. Standard of the Westward Shipping Limited, Vancouver, B.C.*

(3) *National Association of Marine Engineers of Canada, Inc.* on behalf of engineer officers on board the *SS. Cyclo Brave*, *SS. Cyclo Chief*, *SS. Cyclo Warrior* of the *McColl-Frontenac Oil Company, Limited, Toronto, Ont.*

(4) *Canadian Seamen's Union* on behalf of the unlicensed crew members of the deck, engine room and steward's departments of the *M.S. Western Shell* operated by the *Shell Oil Company of British Columbia Limited, Vancouver, B.C.*

(5) *National Association of Marine Engineers of Canada, Inc.* on behalf of the engineer officers on board the *SS. Ontario No. 1* and *SS. Ontario No. 2* of the *Ontario Car Ferry Company, Limited, Canadian National Railways, Montreal, P.Q.*

(6) *The Order of Railroad Telegraphers* on behalf of train despatchers, station agents, assistant station agents, relief assistant agents, relief telegraphers, and station clerks (except clerks at Quebec Station) employed by the *Quebec Railway Light & Power Company Limited (Montmorency Division), Quebec, P.Q.*

(7) *Canadian Seamen's Union* on behalf of the unlicensed personnel on vessels of the *Pelee Shipping Company, St. Thomas, Ont.*

(8) *Canadian Navigators' Federation* on behalf of licensed and/or unlicensed officers holding the position of officers on board the *M.V. A.C.D.*, *M.V. G.D.D.* and *SS. G.T.D.* of the *Davie Transportation Company, Limited, Lauzon, Levis, Que.*

(9) *National Association of Marine Engineers of Canada, Inc.* on behalf of the engineer officers on *SS. Texaco Brave* of the *SS. Texaco Brave Company, Limited, Toronto, Ont.*

(10) *National Association of Marine Engineers of Canada, Inc.* on behalf of the

engineer officers on *SS. Texaco Chief* of the *ss. Texaco Chief Company, Limited, Toronto, Ont.*

(11) *National Association of Marine Engineers of Canada, Inc.* on behalf of the engineer officers on *SS. Texaco Warrior* of the *SS. Texaco Warrior Company, Limited, Toronto, Ont.*

Between: Canadian Seamen's Union, Applicant, and Captain R. Scott Misener, President, Colonial Steamships Limited, and Sarnia Steamships Limited, Respondent, and Captain Norman Reoch, Operating Manager, Canada Steamship Lines, Limited, Respondent

The Board consisted of the Vice-Chairman and Messrs. Complin, D'Aoust, Deschamps, Hills and Mosher.

Reasons for Judgment

This is an application by the Canadian Seamen's Union for leave to prosecute the respondents for alleged contraventions of Section 19, Subsection 1, of the Wartime Labour Relations Regulations. The incidents which the applicant submitted as constituting these contraventions of the Regulations are alleged to have occurred in the summer of 1946, approximately one year ago, at a time when, following a strike of seamen employed on vessels operating on the Great Lakes, negotiations for the settlement of the strike were in progress. At that time, the Canadian Seamen's Union represented the seamen who were on strike and Canada Steamship Lines, Limited, Colonial Steamships Limited and Sarnia Steamships Limited were among the employers whose employees were involved in the strike. Mr. Justice Richards was, at that time, acting as a Commissioner to investigate and endeavour to effect a settlement of the strike. Subsequent to the time of the alleged incidents, an agreement was completed dated September 3, 1946, between the Canadian Seamen's Union and each of the three companies in question, to be effective until December, 1947, covering the terms and conditions of employment of seamen on the companies' vessels whom the union represented. The strike was settled following the completion of the agreement.

The applicant claims that at the time of the negotiations, the respondents offered T. G. McManus, the secretary of the applicant union, the sum of \$100,000 and endeavoured to have him accept this sum if he would lend his support and recommendation for the acceptance of a collective agreement by the union with their respective companies provid-

Reasons for Judgment Issued by the Wartime Labour Relations Board (National) on Applications for Leave to Prosecute

Reasons for Judgment on two applications for leave to prosecute which were refused by the Board at its July sittings and summarized in the August, 1947, issue of the LABOUR GAZETTE follow:—

ing for wage rates and working conditions lower and less favourable to the seamen than those which the union finally obtained for the seamen under the terms of the agreement which was finally reached. The applicant submits that these actions by the respondents constituted interference or attempted interferences in the organization and administration of the union and is accordingly a contravention of Section 19 (1) of the Regulations.

The applicant stated that the year's delay in applying for leave to prosecute for these alleged offences was due to the opinion that such action, if taken at the time the negotiations for settlement were in progress, would have interfered with the success of such negotiations. The applicant claims that the companies have now violated the agreement of settlement arrived at in September, 1946, and accordingly desires at this time to proceed with the prosecution of the respondents for these alleged offences said to have been committed prior to the execution of the agreement.

Both respondents, through their solicitors, have denied unequivocally that any offer or promise of money had been made by them to T. G. McManus as alleged.

The alleged contraventions of the Regulations are punishable on summary conviction and no time limit is specified in the Regulations for the making of a complaint or the laying of information in the case of any offence thereunder. Consequently, the provisions of Section 1142 of the Criminal Code apply. This Section provides that in the case of any offence punishable on summary conviction, if no time is specially limited for making any complaint or laying any information in the act or law relating to the particular case, the complaint shall be made or the information laid within six months from the time that the matter of the complaint or information arose.

As the time limit provided by this Section for the laying of an information for an offence

under the Regulations is long past, the Board is of opinion that no good purpose would be served by giving consent to prosecute in respect of the alleged offences at this time. In any event, it is apparent that the applicant elected in the summer of 1946 to compose all its differences with the companies, of whom the respondents are operating officers, and completed agreements with the companies at that time to this end. The matters involved in the alleged complaint were closely related to and allegedly occurred during the course of the negotiations leading to the settlement.

Having regard for the foregoing, the Board is of opinion that the purpose of the Regulations will not be furthered by giving leave to the applicant to prosecute for the alleged contraventions of the Regulations at this time.

The application is accordingly rejected.

(Sgd.) A. H. BROWN,
Vice-Chairman for the Board.

A. MARCUS, Esq.	} for the
T. G. McMANUS, Esq.,	} Applicant.
A. I. SMITH, Esq., K.C.	} for the
F. W. WILKINSON, Esq., K.C.	} Respondents

Dated at Ottawa, August 26, 1947.

Between: Hull City Transport Limited, Applicant, and Canadian Brotherhood of Railway Employees & Other Transport Workers and J. E. Dore and L. Rivet of Hull, Québec, Respondents

The Board consisted of the Vice-Chairman and Messrs. Complin, D'Aoust, Deschamps, Hills and Mosher.

Reasons for Judgment

This is an application for leave to prosecute the respondents for alleged contravention of Section 20, Subsection (2), of the Wartime Labour Relations Regulations. This subsection provides:—

(2) Except with the consent of the employer, no trade union or employees' organization, and no person authorized by the union or employees' organization to act on its behalf, shall attempt, at the employer's place of employment during his working hours to persuade an employee to join the trade union or employees' organization.

The applicant company operates a bus service in the City of Hull and between that city and the City of Ottawa.

The applicant alleges that on several occasions individual bus drivers were delayed in starting their buses on schedule time by reason of solicitations by Messrs. Rivet or Dore, on behalf of the respondent union, made to such drivers to have them join the union. The applicant was unable to furnish the Board at the hearing with actual dates and times at which the incidents constituting the alleged offence occurred.

The respondent union denies that Rivet was ever authorized to represent it in connection with organizational activities of the union and claims that Dore, who is an accredited union organizer, was specifically instructed not to undertake during working hours organizational activities of employees of the company or on the company premises. On behalf of Dore, the allegations made by the company of organizational activities carried on by him among employees of the company during their working hours, were denied. The respondent union further claims that

organizational activities of another rival union during working hours among employees of the applicant have been permitted and encouraged by the applicant's officers. This is denied by the applicant.

At no time, either prior to or subsequent to the filing with the Board of the application for leave to prosecute, did the applicant take up with the union officers the matters involved in the present complaint, although the union maintains an office in the nearby City of Ottawa.

There are, at the present time, applications pending before the Board filed by the respondent union and by another rival organization for certification of bargaining representatives for the employees of the Company in respect of which a vote of the employees affected has been ordered by the Board.

In the circumstances of this case, the Board is of opinion that the airing of the complaint before the Board, which has served to bring matters relating to the complaint directly to the attention of the respondent, will serve the purpose of the Regulations, and the granting of leave to prosecute at this time is inadvisable.

The present application is accordingly rejected.

(Sgd.) A. H. BROWN,
*Vice-Chairman
for the Board.*

R. BEDARD, Esq., K.C.,
L. BISSON, Esq.,
for the Applicant.

of Railway Employees and
Other Transport Workers and
J. E. Dore.*

Dated at Ottawa, August 26, 1947.

Conciliation Proceedings under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlement of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National), and, until May 15, 1947, such disputes in certain provinces were also referred to the Minister by the Provincial Boards in their respective jurisdictions. The Minister then appoints a Conciliation Officer to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Conciliation Board, a Board is then established by the Minister. The duty of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

I. Assignment of Conciliation Officers

During August, 1947, Conciliation Officers were assigned to confer with the parties in an attempt to effect an agreement in the following cases:

Canadian National Steamships (Pacific), Canadian Pacific Railway Co. (B.C. Coast Steamship Service), and Union Steamships Ltd., and Seafarers' International Union of North America (AFL). G. R. Currie, Conciliation Officer.

Transit Tankers & Terminals Ltd., Montreal, P.Q., and Canadian Seamen's Union (TLC). R. Trepanier, Conciliation Officer.

II. Agreements Facilitated by Conciliation Officers or Applications Withdrawn

In the following cases, reports were received during August, 1947, from Conciliation Officers indicating the successful completion of negotiations with the signing of an agreement or the withdrawal of the application for intervention:

Lakehead Terminal Elevators Association, representing all elevator companies operating at Fort William and Port Arthur, Ont., and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). H. S. Johnstone, Conciliation Officer.

Oshawa Railway Co. (subsidiary of Canadian National Railways), and Oshawa Railway Employees' Union (Division 1255, Amalgamated Association of Street, Electric Railway & Motor Coach Employees of America) (AFL-TLC). J. S. McCullagh, Conciliation Officer.

III. Boards Established

During the month, a Conciliation Board was established to deal with a dispute between the following parties:

Canadian National Steamships (Pacific), Canadian National Railways (B.C. Coast & Lakes Barge & Ferry Service), Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and Canadian Merchant Service Guild (TLC). G. R. Currie, Conciliation Officer.

III.A. Recommendations of Conciliation Officers Referred to Provincial Ministers of Labour

In the following cases, Conciliation Officers appointed by the Minister of Labour before May 15, 1947, to deal with disputes now falling within Provincial jurisdiction reported during the month of August that they had been unable to effect settlements of the disputes and recommended the establishment of Conciliation Boards and their recommendations were referred to the appropriate provincial Ministers of Labour:

Huxley Cartage Co., Ltd., Winnipeg, Man., and Truck Drivers' Unit, One Big Union. H. S. Johnstone, Conciliation Officer.

North Star Oil Co. Ltd., Winnipeg, Man., and Oil Workers' Union of Canada (CCL). H. S. Johnstone, Conciliation Officer (Vice R. H. Hooper).

IV. Boards Fully Constituted

Canadian National Railways (sleeping, dining and parlour car department). The Conciliation Board established to deal with a dispute between the Canadian National Railways (sleeping, dining and parlour car department) and the Canadian Brotherhood of Railway Employees and Other Transport Workers was fully constituted on August 29, 1947, with the appointment of Mr. Justice G. B. O'Connor, Edmonton, as Chairman of the Board, in the absence of a joint recommendation by the other two members of the Board, C. W. Johnstone, Montreal, and Professor J. E. L. Graham,

Winnipeg, who had been appointed on the recommendation of the employer and employees respectively.

V. Board Reports Received

During the month, Board reports were received in the following cases:

Canadian National Railways (Freight Handlers on Montreal Wharf) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC).

Canadian Pacific Railway Co. (Freight Handlers on Montreal Wharf) and Brother-

hood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC).

Fairfield & Sons Ltd. (St. James Plant), Winnipeg, Man., and Woollen Mill Employees' Unit, One Big Union.

Grimsby Stove & Furnace Co., Grimsby, Ont., and Local 805, International Union, United Automobile, Aircraft & Agricultural Implement Workers of America (CIO-CCL).

Northern Electric Co. Ltd., Toronto, Ont., and Local 4, United Telephone Workers of Canada (CCL).

Report of Conciliation Board in Disputes between Canadian National Railways (Freight Handlers on Montreal Wharf) and Canadian Pacific Railway Co. (Freight Handlers on Montreal Wharf) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC)

On August 6, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Hon. Mr. Justice C. E. Guerin, Montreal, Chairman, appointed by the Minister of Labour on the joint recommendation of the other two members of the Board, T. R. Meighen, K.C., Montreal, and M. W. Wright, Ottawa, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

Union Representatives Before the Board

Mr. F. H. Hall, Vice-President
Mr. W. A. Rowe, General Chairman
Mr. J. O. Clark, Representative
Mr. A. Bergeron, Local Chairman
Mr. J. Burnett, Local Chairman

Company Representatives Before the Board

Mr. R. C. Johnston
Mr. P. E. Ayrhart
Mr. A. J. Lomas
Mr. J. F. Curran
Mr. M. A. Monahan

For the Canadian National Railways.

Mr. H. D. Brydone-Jack
Mr. S. M. Gossage
Mr. W. F. Tully
Mr. A. M. Sime

For the Canadian Pacific Railway Co.

The above mentioned Board of Conciliation, appointed by the Minister of Labour to act in respect of the dispute between the above parties, held its sittings at the Court

House in Montreal on July 11, 14, 15, 18 and 25, 1947. On July 14, the full Board visited the Wharf at Montreal where every opportunity was given to inspect the Wharf Freight Handlers and the Longshoremen while at work. The Board also visited the Freight Shed at Place Viger, in Montreal.

The interested parties have filed with the Board, as Exhibits P-1 and P-2, memoranda covering the contested clauses of the proposed draft of a collective agreement.

They have submitted four clauses to the Board in regard to which they have declared themselves as being unable to reach an agreement. As to the other contested clauses mentioned in Exhibits P-1 and P-2, the parties have declared that there is likelihood of agreement and they have agreed not to submit them to this Board.

The five (5) contested clauses submitted are:—

- (1) A demand for an hourly increase in wages of twenty (20) cents for all the employees represented by the Union;
- (2) A demand for a work-day of eight (8) hours instead of nine (9) hours per day for all the employees represented by the Union;
- (3) A demand by the Union for double-time instead of time-and-a-half for work performed on Sundays or any of the following holidays: New Year's Day, Good Friday, Victoria Day, Labour Day, Thanksgiving Day, Christmas Day;
- (4) A demand for an increase of fifteen (15) cents per hour for all work performed in Refrigerator cars and for handling bulk cargo;

- (5) An increase in the differential for night work from five cents per hour to one and one-half time the day rate.

I

Adjudicating on the merits, the disputes above mentioned were submitted to two previous Boards of Conciliation: one presided over by the Hon. Brooke Claxton, K.C., in 1938, and the other presided over by the Hon. Judge Coughlin, in 1940.

The same disputes were also considered in 1943 by the National War Labour Board.

It is evident from the briefs filed by the parties, that the same arguments have been raised before this Board as were presented to the previous tribunals.

However, there is a new factor proposed by the Union for the consideration of the present Board, viz.: the hours of work performed by the employees have been reduced from ten (10) hours per day to nine (9) hours, and, as a result, the employees have been deprived of one hour's pay per day.

The Union contends that the differential in earnings between the Wharf Freight Handlers and the local Freight Shed Handlers has been narrowed, and that the margin of wages established by the Claxton Report does not presently exist.

This Board is convinced that in spite of the increase in wage rates which had been directed by the National War Labour Board to be paid to all employees of the Railways, the Wharf Freight Handlers have suffered loss of earnings through the action of the Companies in having reduced the working hours.

The present Board also finds that the Companies did not grant to the Wharf Freight Handlers the increase allowed by the Claxton Report and confirmed by the other Boards, i.e., the Coughlin Board and the National War Labour Board. At the present time the Wharf Freight Handlers are paid by the Railway Companies eighty-one (81) cents per hour (Truckers-base rate) and the local Freight Shed Handlers are paid seventy-six (76) cents per hour. The Claxton Report recommended an increase of 7 cents per hour or a differential of 14 per cent over the local Freight Shed Handlers. (Summary of Claxton Report, LABOUR GAZETTE, November, 1938, page 1203.)

The Claxton Report has been well summed up by the Hon. Judge Coughlin in his Report, and the present Board takes as its own the reasons for the decision which are reported in LABOUR GAZETTE, November 1940, pages 1117-1118:—

It thus seems to us that the findings of one Board should not be lightly over-ridden

or modified by another. Only where new evidence discloses an error in the previous findings of fact, or where there has been evident application of a wrong principle or some other cause clearly invalidating the previous decision should, in our opinion, the right of revision be exercised.

We have carefully gone through the Claxton Report filed as Exhibit 1 in the Employees' brief. We have examined in particular its findings that:—

- (1) The rates payable to wharf freight handlers at ocean ports are governed by special agreements arrived at in the light of local as well as of more general considerations;
- (2) The settlement of the Montreal Wharf Freight Handlers' rates should be dealt with by this Board as a local question.
- (3) Among the factors to be considered should be:—
 - (a) the nature of the work;
 - (b) the conditions of employment;
 - (c) the rates paid for comparable work;
 - (d) In considering rates paid for comparable work the wages and conditions of work of the long-shoremen at Montreal and of the freight handlers at the Montreal railway sheds should be a guide to the Board;
 - (e) The seasonal nature of their employment distinguishes the work of the wharf workers from shed workers;
 - (f) The railways should be willing to pay to men of experience employed at the wharf throughout a seven months' season a higher hourly rate of pay than that paid to men at city sheds engaged in all the year round work of a somewhat less onerous nature;
 - (g) The work of the Wharf Freight Handlers is somewhat less laborious and considerably less dangerous than the work of long-shoremen.

(4) That for these reasons a proper addition was made to the hourly rate of Wharf Freight Handlers of 7 cents.

Having so considered the above findings we express our positive concurrence with findings Nos. 1, 2 and 3.

With respect to No. 4 we do not dissent. It may be that the increase should be less. It may be that it should be more. It is a recommendation of a properly constituted Board, logically arrived at, and based on properly found facts, and as such should stand. We therefore adopt it as our findings and recommend that the further increase of 4 cents be allowed. It is our opinion and recommendation that this rate take effect as of the date of this Report.

We are not bound by the decision above mentioned, but, as stated by the Hon. Judge Coughlin, "the findings of one Board should not be modified by another, unless new evidence discloses an error," etc.

With the exception of the new factor mentioned above nothing has been established before this Board to prove that the

Claxton Report was based on wrong principles.

The main reason advanced by the Union to obtain an increase of wages is the difference of rates between the wages paid to the Longshoremen and the rates paid to Wharf Freight Handlers. The difference in wage rates as between these two groups is now thirty-two (32) cents per hour.

We note that, in its Reasons for Decision, the National War Labour Board stated as follows (LABOUR GAZETTE, November, 1943, pages 1498-9):—

The Union based its case upon a comparison between wages paid to longshoremen at the same ports and those paid to the freight handlers. The Railways advanced an entirely different comparison, namely, that between these wharf freight handlers and the regular freight handlers on the railways at points where loading into steamships is not involved.

We have reached the conclusion that neither comparison is strictly correct. There has been a long established differential and a fairly considerable one between the wages paid to longshoremen and those paid to freight handlers. It appears that though at one time the differential was not very great, the spread has tended to widen in favour of the longshoremen. Naturally this has been the cause of a good deal of dissatisfaction among the wharf freight handlers. It appears that two Conciliation Boards in recent years have dealt with the situation at Montreal. The one under the Chairmanship of Mr. Brooke Claxton, M.P., in 1938 brought in a recommendation that the base rate should be increased by 7 cents per hour. The other under the Chairmanship of His Honour, Judge Coughlin, in 1940 made a similar recommendation; in fact, it seems to have simply adopted the Claxton Board Report. The Companies have only implemented the reports to the extent of granting a 3-cent increase although subsequently they paid a full cost of living bonus. The Claxton Board, judging from its report, went very carefully into a comparison between the work done by wharf freight handlers on the one hand and that done by longshoremen and ordinary railway freight handlers on the other. The conclusion reached appears to have been that the work of the wharf freight handlers was more comparable to that of longshoremen than the Railway Companies were prepared to admit. We have come to a similar conclusion. It seems to us that some extra degree of skill is probably required in the work of longshoremen but that the work of the wharf freight handlers is to some reasonable extent comparable with that of the longshoremen and of the ordinary freight handler as well. In the case of both the longshoremen and the wharf freight handler the work at these ports is seasonal which is not the case with the ordinary railway freight handler. It has become a fairly generally accepted practice for seasonal workers to receive a somewhat advanced hourly rate because the opportunity to work is less.

In the result, the National War Labour Board confirmed the recommendation of the Claxton Report.

This Board believes that it should accept the differential between the two groups established by the Claxton Report. This Board considers that the intention of the Claxton Report was to establish a differential between the Wharf Freight Handlers and local Freight Shed Handlers, and finds that this differential between the two groups does not exist at the present time.

The Claxton Report recognized a differential between the Shed Freight Handlers and the Wharf Freight Handlers of 14 per cent in favour of the latter. This Board accepts the principle established by the Claxton Board and recommends to the parties that this differential be maintained. In the present circumstances, a 14 per cent differential over the base rate for Shed Freight Handlers would be 10.64 cents or, accepting the fraction nearest to the half cent, 10½ cents per hour. The present differential is only 5 cents per hour. In order to attain the 14 per cent differential, the existing wage rates of the Wharf Freight Handlers should be increased by 5½ cents per hour. We so recommend.

II

The Board is of the opinion that the Union's request for reduction of the work-day from 9 hours to 8 hours with maintenance of take-home pay should not be granted. This Board feels, however, that the Union's request has its origin in a fear that the work-day may be still further reduced with consequent further loss of earnings. The Board understood at the hearing that the Railways would not reduce the work-day, at least for the present season.

III

The Board does not recommend implementation of the suggested rates for employment on statutory holidays.

IV and V

In view of the fact that the Board has been unable to reach complete agreement upon the requests for differentials for work performed in refrigeration cars and in handling bulk cargo as well as with respect to night differentials, it refrains from making any recommendations in connection with these issues.

The recommendations herein contained are to be effective as from the date on which application was made for a Conciliation Board. The Board is of the opinion that if no retroactivity is given, delay in conciliation proceedings would always be prejudicial to the interests of the employees.

All of which is respectfully submitted.

Dated at Montreal this 28th day of July, 1947.

(Sgd.) C. E. GUERIN,
Chairman.

(Sgd.) M. W. WRIGHT,
Member of Board.

Minority Report

To the Honourable,
The Minister of Labour,
Ottawa, Ont.

SIR:

The Board of Conciliation and Investigation appointed by you in the above matter to inquire into the dispute between the Railways and certain of their employees commenced its hearings in Montreal on July 11, 1947, at the Court House. On July 14, 1947, the Board visited the Montreal harbour and the Place Viger freight sheds, where they observed the work of longshoremen, wharf freight handlers and freight handlers in a local freight shed. The visit took the greater part of the day but the Board conferred at the Court House in the late afternoon. The Board met and conferred again on July 15, 1947, and on the following days considered the submissions which had been made to them and the nature and terms of the report to be submitted. In an unsuccessful attempt to reach agreement, a further conference had been arranged for July 18, 1947, which was attended by the chairman and the undersigned. Despite sincere endeavours to reach agreement, it was found impossible to reconcile our divergent views.

The representatives of both sides presented their case with great care and thoroughness and conducted themselves before the Board in the most commendable manner. The complete co-operation received from all parties was very much appreciated.

At the hearings, the employers were represented by:—

Canadian National Railways

R. C. Johnston, Director of Labour Relations.

P. E. Ayrhart, Assistant to Director of Labour Relations.

A. J. Lomas, General Superintendent, Montreal District.

J. F. Curran, Assistant Chief Clerk, Gen. Supt's Office.

M. A. Monahan, Freight Agent, Montreal Wharf.

Canadian Pacific Railway Company

H. D. Brydone-Jack, Manager of Personnel.

S. M. Gossage, Assistant Manager, Department of Personnel.

W. F. Tully, General Superintendent, Quebec District.

A. M. Sime, Dock Superintendent, Montreal Wharf.

And the employees were represented by:—

Mr. F. H. Hall, Vice-President.

Mr. W. A. Rowe, General Chairman.

Mr. J. O. Clark, Representative.

Mr. E. Bergeron, Local Chairman (CPR).

Mr. J. Burnett, Local Chairman (CNR).

The application on behalf of the employees, known as wharf freight handlers, proposed a number of changes in existing agreements. At the hearing, the representatives of the employees asked the Board to leave certain of the proposals for negotiation between the parties and to confine itself to the remaining proposals which are, in essence, the following:—

- (1) An increase in the basic rate of .20 per hour;
- (2) An increase in the differential for night work from .05 per hour to one and one-half times the day rate. If the present basic day rate is maintained, this means an increase in the night differential from .05 to .40½ per hour: if the proposal of the employees for a .20 increase in a basic day rate is applied, this would mean an increase in the night differential from .05 to .05½;
- (3) Abolition of graduated rates for checkers, paying all at the highest rate;
- (4) Double time instead of time and one-half for work during meal hours, Sundays and specified holidays;
- (5) A differential of .15 per hour for work in refrigeration and when handling bulk cargo;
- (6) Limitation of day work to 8 hours.

The main ground urged by the employees was an alleged relationship that they held should exist between their basic rates and those of longshoremen. A second ground was an alleged loss of take-home pay resulting from what they asserted to be a reduction in the usual day from 10 hours to 9 hours.

The main ground has been the subject of dispute between the employers and the employees for some years. The employees hold to the view that their work is similar to that of longshoremen and that their rates of pay and conditions of employment should closely approach those of longshoremen. The employers hold to the view that the work of the employees is similar to that of railway freight handlers in local freight sheds and that the rates of pay and conditions of employment of both should be the same.

It is quite true that the employees handle the same freight as the longshoremen: but the employees handle it between railway freight cars and the shed floor while the longshoremen handle it between the hold of a ship and the shed floor. The employees stow in a freight car while the longshoremen stow in the hold of a ship which is quite different.

With previous Boards of Conciliation which have considered the matter, I am satisfied that, in the words of the National War Labour Board, "there has been long recognition through the field of collective bargaining of a definite and decided difference."

It is equally true that every ton of freight placed in or taken from a freight car by the employees will be unloaded or has been placed therein by some workmen elsewhere. These workmen are freight handlers at local freight sheds or workmen employed by employers other than the railways; and the nature of their work can and does differ but little, if any, from that of the wharf freight handlers. The observation we were able to make of the work of the handlers at the wharf and those at a local freight shed indicated that, in general, the freight at local sheds was in the main lighter but involved longer hauls by hand truck and cramped space restricted the use of mechanical equipment: on the wharves, the freight was generally heavier but more mechanical aids were available.

The conditions of employment do, however, differ in that the handlers at the local freight sheds are steadily employed for twelve months in the year while the work of the wharf freight handlers is seasonal and intermittent.

By the process of collective bargaining over the years, an elaborate and definite wage rate structure has developed involving established differentials as between the many different classes of the thousands of employees of the employers. While I do not doubt for a moment the sincerity of the representatives of the employees in their assurance that they regarded this application as a purely local

matter, it appears to me inevitable that other railway employees do and will compare their wage rate with that paid wharf freight handlers. In the premises, it is both unreasonable and impractical to relate the wage rate of one class of railway employees to the wage rate of a relatively small group of employees of other employers rather than to that of other employees of the railways. In determining what differential one class of railway employees should enjoy over another, some guidance is certainly to be obtained from a comparison of the rates paid the former with rates paid comparable labour by other employers. I am satisfied, however, that the wage rates of any class of railway employees should and must be established by relationship to the wage rates paid other railway employees.

The basic wage rates for wharf freight handlers at Halifax is now .80½; at Saint John, it is .82. The basic rate of the handlers at local sheds is now .05 per hour less than that of the wharf freight handlers: what evidence has been given us indicated that the wage rate of employees of other employers doing similar or comparable work is generally less than that of the wharf freight handlers.

Although I entertain no doubt that Boards of Conciliation and Investigation are not bound by decisions reached previously by other Boards on similar problems, nevertheless the considered and reasoned opinions reached by other minds directed to the same inquiry are certainly to be examined and studied and a different solution that will disturb what has become established should be recommended only on substantial grounds.

The main ground of the employees was the subject of a careful study by a Board of Conciliation under the chairmanship of Mr. Brooke Claxton in 1938. The nominee of the employers, in a minority report, upheld their views. To the minority, on the one hand, "it was also clear from the nature of the work that the longshoremen must be exposed to greater risks of accident and injury than were the freight handlers" and they "felt that the longshoremen were doing work of greater difficulty and greater risk under worse conditions." On the other hand, when comparing the work on the wharves with that in local freight sheds, it was their conclusion "that the freight handlers and the conditions of work differed sufficiently in the two classes to entitle employees at the wharves to a higher rate of remuneration." Because they found the work of the employees to be seasonal and intermittent, while that of the freight handlers at local freight sheds

was steady for twelve months in the year, they concluded that "the fact that the work is seasonal is a factor to be considered in the light of present conditions" and that "the railways should be willing to pay something more than the rates established by themselves for very much more steady, all the year round, employment in a similar, though if anything, less difficult operation." At the time, the basic rate for wharf freight handlers and those in the local freight sheds was the same for truckers at .50 per hour. Weighing these various considerations, they concluded that "the higher rate of remuneration" the "something more" should be .07 per hour, expressing their opinion that "the railways should increase the rate from .50 to .57 per hour for truckers and should allow a similar increase to the other classes affected."

The railways declined to accept the minority report but subsequently granted a .03 per hour increase. Later the employees pressed again for an increase on the same ground and the dispute was again submitted in 1940 to a Board of Conciliation and Investigation under the chairmanship of Mr. Justice J. J. Coughlin. The nominee of the employers, in an exhaustive minority report, supported the stand of the employers. The majority recommended an increase of .04 per hour although the employees had asked for considerably more. It will be noted, particularly, that the majority recommended no greater increase than the .04 necessary to make the total of .07 recommended by the Claxton report although the difference between the basic rate of longshoremen and the employees had increased since the Claxton report from .27 to .32 in spite of the increase of .03 granted during the same interval to the employees. It specifically rejected a request for an additional .08 requested by the employees because of the recent increase in the rates of longshoremen.

The railways again declined to act on the majority report.

In 1943 the employees applied on the same ground to the National War Labour Board for an order to increase the basic rate by .22 per hour and again this Board also concluded in favour of an increase of .04 only to make up the total of .07. The Board ordered accordingly with effect from June 22, 1943 and the railways, as bound, complied. At this time, the difference in the basic rate (including cost of living bonus) between the longshoremen and the employees was .33 as against .27 at the time of the Claxton report and .32 at the time of the Coughlin report

In 1945, on a further application, the National War Labour Board found that:—

(c) to continue to maintain relationship of wage rates between the Companies' occupational classifications engaged in its freight handling operations at the Montreal and Saint John Wharves and similar occupational classifications engaged at local freight sheds, as established by the National War Labour Board's Finding and Direction in June, 1943, it would be fair and reasonable and consistent with the intent of War-time Wages Control Order, 1943, P.C. 9384 to adjust wage rates of the Companies' occupational classifications engaged in freight handling operations at Montreal and Saint John Wharves as requested by the application.

and it ordered accordingly, with effect from February 15, 1944. In express terms, the Board found that the relationship that had been established and was to be maintained was one with the freight handlers in local freight sheds and not one with longshoremen. At the time of this order, the difference between longshoremen basic rates and those of the employees had further changed to .28.

The above recital has been restricted to the matter of increase in basic rate. The following is a summary of the disposition by the majority of these two Conciliation Boards and the National War Labour Boards on matters submitted to them which were again submitted to us:—

Increase in night differential—Claxton report
—No recommendation. NWLB (1943)—
Rejected.

Abolition of graduated rates for checkers—
Coughlin report—No recommendation.
NWLB (1943)—Rejected.

Double time instead of time and one-half
during meal hours and on Sundays
and specified holidays—NWLB (1943)—
Rejected.

Differential of .15 per hour when handling
specified commodities—NWLB (1943)—
Rejected.

It is apparent that the previous Boards have consistently refused to relate the wages and conditions of work of the employees to that of longshoremen. They have refused to grant any of the differentials and overtime rates enjoyed by longshoremen and they have granted and maintained an increase bearing a constant flat relation to the rates of the handlers in the local freight sheds throughout a period when the differential with the rate of longshoremen varied continually and widely. Moreover, they have consistently assessed that relationship at .07 in basic rate in favour of the wharf freight handlers.

The only new factor in the dispute is the second ground raised by the employees. It

is not entirely accurate to say that the work day has been decreased. Present agreements do not provide for a fixed number of hours of day work per day. They provide that hours of service shall start between 7 a.m. and 1 p.m., that day hours shall be between 7 a.m. to 6 p.m., and that the night differential shall be paid for work during night hours from 7 p.m. to 5 a.m. But there is no agreement that the men each day shall work a fixed number of day hours or a fixed number of night hours. They are granted a minimum of three hours pay when called to work. Their work is admittedly intermittent; and they are compensated for the intermittent nature of their work by a greater basic rate. One of the important factors justifying the increase of .07 in the rate was the intermittent nature of the work. The work available and the hours for such work are largely governed by the time of arrival and departure of vessels and by the time of the longshoremen to load and unload them. Because the longshoremen in 1946 commenced day work of loading and unloading vessels at 8 a.m. instead of 7 a.m., work was not available for freight handlers before 8 a.m. so that the practice was adopted of calling them for work not before that hour.

It does not necessarily follow that because day work, admittedly intermittent, commences an hour later than formerly, the total number of day hours worked is inevitably less. It may well be the consequence that the men work an hour later than they would have worked otherwise; and that an extra hour may be added to night work at a higher rate of pay. Moreover, in respect to intermittent work, a day is not a suitable unit from which to calculate take-home pay. With a given amount of work available, a daily starting time one hour later may well simply result in spreading the work over a greater number of days, or avoid a lay-off before more work becomes available by the arrival of another vessel. No facts were given us to establish that in fact take-home pay was less: what few figures were given indicated the contrary.

In principle, where work is seasonal and intermittent, basic rates cannot be varied as work is available. There would be as much reason to increase basic rates by reason of a slack season as there would be to increase them by reason of a later starting time.

I, therefore, conclude that the second ground has not been established as a factor to justify an increase in basic rates.

On the whole, I conclude that, although I might have been persuaded to a contrary conclusion in an original consideration of the problem, there are good grounds to hold that the employees are entitled to a higher rate

of pay than the handlers in the local freight sheds. The grounds to the contrary are not sufficient to warrant that I should now differ from the opinion of previous Boards.

The precise assessment of the amount of that extra compensation is a matter of great difficulty. There are good grounds to support the assessment of previous Boards which has become established, I do not find substantial grounds to differ either way, and, therefore, I am persuaded to maintain the differential of .07 with the basic rate paid handlers at local freight sheds. Due to the incorporation, in February, 1944, of a cost of living bonus, which was determined in a weekly amount, in basic rates of pay on an hourly basis, the basic rate of pay of the employees was then increased .08 per hour whereas that of the handlers in local freight sheds, working less hours per day and week, was increased .10. Accordingly the differential dropped to .05. To restore it, an increase of .02 per hour is necessary.

The ground advanced by the employees in support of the request for double time, for the increase in the differential for night work, and for the differential for handling certain commodities, was the comparison with longshoremen. That comparison I find unfounded. I am satisfied that the rates of pay of the employees must be related to other employees of the railways and not to the longshoremen. Consequently, with previous Boards, I am not persuaded to recommend these changes.

The proposal for the establishment of a day of eight hours service during which day rates would be paid is so inextricably bound up with the proposal for an increase of .20 in basic rate (this increase being designed to insure the same take-home pay for eight hours work as was previously earned for 10 hours work) that, having concluded not to recommend the one, I similarly conclude as to the other.

I see no reason not to follow the other Boards as to the proposal to abolish graduated rates for checkers. Indeed, this proposal was very sketchily dealt with before us.

In view of all the facts and the circumstances submitted and according to the merits and substantial justice of the case, I am of the opinion:—

- (a) That the employees have substantiated their proposal for an increase in basic rate to the extent of .02 per hour;
- (b) That they failed to substantiate their proposals for any greater increase as well as those for other changes.

Report of Conciliation Board in Dispute between Fairfield & Sons Ltd. (St. James Plant), Winnipeg, Man., and Woollen Mill Employees' Unit, One Big Union

On August 11, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Honourable Mr. Justice A. K. Dysart, Winnipeg, Chairman, appointed by the Minister of Labour on the joint recommendation of the other two members of the Board, F. G. Thompson and Andrew Scoble, both also of Winnipeg, appointed on the nomination of the employer and employees, respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

Dear Sir:

We the undersigned, being the members of the Board of Conciliation appointed by you on the 9th day of May, 1947, to "endeavour to effect an agreement between the parties" above mentioned "on the matters on which they have not agreed,"—having now done all that seems to us practicable in the premises, beg leave to submit herewith our report.

The "matters on which the parties had not agreed" were, chiefly (1) whether or not the Company should enter into a collective agreement with the Union, and (2) the terms and conditions which ought to be embodied in such an agreement.

At those of our meetings at which the parties attended, the Company was represented, generally, by H. C. Fairfield and J. L. M. Thomson; and the Union, by R. B. Russell, and W. Frenchuk and others.

Throughout our proceedings, the Union Spokesmen exhibited an earnest though conciliatory desire to bring about an agreement. The Company's representatives displayed a willingness to discuss upon its merits every question at issue relating to the terms and conditions of employment, but asserted from the outset that the Company would, in no circumstances whatever, sign a collective agreement. With a few brief interludes, the discussions were conducted with mildness and cordiality.

The problem presented to the Board was not an easy or hopeful one, as appears from the history of the dispute. Briefly that history is that on March 5, 1947, the Union, having lately organized, and secured the certification of its bargaining representatives, requested the Company to enter into negotiations for a wage agreement, and submitted a draft agree-

ment as a basis for negotiations; that, receiving no satisfactory response, the Union successfully applied to have Mr. H. S. Johnstone, Industrial Relations Officer, Dominion Department of Labour, located at Winnipeg, intervene in the dispute; that Mr. Johnstone's efforts to bring about an agreement, as appears from his Report to you of May 6, 1947, were frustrated by the "adamantly maintained" refusal of the Company to commit itself to any agreement, and by the unusually "small measure of agreement" existing between the parties as evidenced by the fact that of the thirteen items or sections of the proposed agreement, the parties were in agreement on only one.

The Company's determination not to sign an agreement was reasserted at the outset, and left the Board with no alternative but to attempt, by general discussion, to ascertain how far the parties were in agreement upon the actual conditions affecting the labour relations between the parties.

This attempt was made in the hope that if substantial agreement could be reached on essentials of the relationship, the prospects of the Company's signing an agreement might be greatly improved.

As the basis for these discussions, we used the same draft agreement which the Union had submitted to the Company in March, and which had been used by Mr. Johnstone at his meetings. We went over this proposed agreement section by section.

By a process of dealing with the less controversial sections first, and leading gradually up to the more difficult ones, we were able to bring the discussions finally up to a dispassionate objective level. The compromises made in respect of the easier sections, paved the way for compromise on the harder ones. In all this the Company adhered, generally, to its established practices but made many minor alterations to meet the Union's wishes; the Union, on its side, abandoned some sections of the draft agreement altogether and accepted substitutes for others. On the important section dealing with classifications of employees and their respective rates of wages, the parties finally came to complete agreement on the Company's terms.

For the purposes of record, we attach as an Appendix to this Report, a summary—quite full and complete—of these discussions, and of the disposition made of the respective sections.

It should be noted that the parties came to agreement in eleven of the thirteen sections.

One result of our efforts is that there now remains between the parties no dispute at all relating to working conditions or rates of pay. Every point of dispute has been settled except that of entering into a written collective agreement.

Understandably the Union desires to have an agreement in writing—for the sake of security. P.C. 1003 10 (1) seems to give them the right to expect it. We must add, too, that Mr. Russell sought, by conciliation and compromise, to induce the Company spokesmen to see and accept his point of view. His efforts in that behalf were at the conclusion of our discussions, strongly supported and supplemented by members of the Board but all our efforts failed to move the Company from its adamant resistance.

The Company has its own reasons for this attitude. Some of them are well founded—others ill founded. It points out that the "St. James Plant" is a comparatively new venture by the Company; that it is not yet firmly established or rooted; that the majority of its daily employees are unskilled transients who can have no interest in the eventual success of the venture because they come and go when they wish; that for these transients a collective agreement is not essential because they do not seek security here; that the more permanent employees do not need an agreement because the Company will continue its practice of treating them fairly and equitably; and finally that the Company fears and resents dictation from any outside group of Union bosses—a dictation which it thinks is not in the best interests of either the Company or these employees.

Appraising these reasons, we are satisfied (1) that the Company's fears of outside domination have no foundation in the One Big Union, because this Union is organized upon the principle that each group of workers—each plant—shall be self-governing and free from all outside control; (2) that the enterprise is surely becoming sufficiently well established to warrant an agreement. This view is based partly upon the attitude of the Company as expressed by Mr. J. L. M. Thomson in his letter of March 8, 1947, to Mr. Russell in which he asks, not that consideration of an agreement be abandoned, but that it be deferred until about August of this year. August the first has arrived and nothing has happened to warrant a change in the Company's attitude of last March.

On the whole, we recommend that a collective agreement be entered into between these parties.

All of which is respectfully submitted.

(Sgd.) A. K. DYSART,
Chairman and Member.

(Sgd.) F. G. THOMPSON,
Member.

(Sgd.) A. SCOBLE,
Member.

Appendix

This appendix sets forth in summary the discussions of the parties which took place in the presence of us the undersigned members of a Conciliation Board, respecting each section of a proposed collective agreement then under consideration by the parties, together with the disposition made, or "measure of agreement" reached, upon each of the thirteen sections (or "clauses") of the said proposed agreement.

(Sgd.) A. K. DYSART,
Chairman and Member.

(Sgd.) F. G. THOMPSON,
Member.

(Sgd.) A. SCOBLE,
Member.

1. As to those clauses in the draft Agreement which provided for the "Duration" and for the "Renewal and Termination" of the Agreement (clauses 1 and 13 respectively), the Company refused to consider them at all. This they did on the ground that these clauses presuppose that an agreement would come into existence, whereas the Company will not bring it into existence.

2. The clause providing for the closed shop and check-off (clause 2) was so stoutly opposed by the Company that the Union withdrew the clause altogether. It is therefore eliminated from the draft. But both parties agreed that there will be no discrimination in favour of or against any person on grounds of membership or non-membership in the Union.

3. The clause governing the hours of work (clause 3) was agreed upon with some variations. As agreed to, it provides that

(a) Day shift shall be from 8 a.m. to 5 p.m. each day Monday to Friday, both inclusive, with one hour off at mid-day for lunch.

(b) Night shift shall be from 5 p.m. to 2 a.m. each day Monday to Friday, both inclusive with one hour off for lunch.

(c) Provision in the clause for a third shift was dropped, as the Company has no intention of establishing such a shift.

(d) For the office staff the work day is to consist of $7\frac{1}{2}$ hours exclusive of a half hour for lunch, every day Monday to Friday, both inclusive, and $3\frac{1}{2}$ hours on Saturday.

4. Overtime provisions (clause 4) were agreed to, with some alterations. As altered, the clause stands thus:

(a) Employees will not be required to work overtime unless impracticable to make other arrangements.

(b) Time and one-half will be paid for the first 4 hours worked over the regular working time in any one work week; and double time thereafter.

(c) Employees will not be laid off to balance overtime.

5. Regarding Seniority (clause 5) the parties agreed on the essentials thereof, namely, that:

(a) Seniority of all employees shall date from the time employees respectively last entered the service of the Company.

But as regards the Union's request that a Seniority List be annually posted or issued to the Union, the Company refuses to depart from its present practice of relying upon its office records. So this aspect remains unsettled.

6. Provisions for the Promotion of employees and Reduction of staff (clauses 6 and 8 respectively) were dealt with together. The parties were in substantial agreement upon this. Promotions are to be made in the order of seniority, coupled with skill, industry, efficiency, and fidelity; and staff reductions are to be made on the same principle in reverse.

7. The provision for Temporary Changes in Position (clause 7) was not agreed upon because of the difficulties of providing for the slight, though many, changes that from time to time are required of members of the staff in the conduct of their work. This difficulty is recognized by the Union, and this clause may be considered as abandoned.

8. The provisions for Vacation (clause 9) were agreed to, with changes in form suggested by the Board. As changed, they stand as follows:

All employees will receive or be allowed, with full pay, in each year,—

(a) *Vacations,*

After 12 months' service: One (1) week.

After 2 years' service: Two (2) weeks.

(b) *Statutory Holidays,*

All the statutory holidays prescribed by the Manitoba Interpretation Act. To this the Company adds voluntarily the Civic Holiday of the City of Winnipeg.

9. Provisions governing Working Conditions (clause 10). This subject led to some pointed discussion; the Company representatives stating that as in the past, so in the future, the Company will live up to all the regulations governing working conditions as may be prescribed by law in Manitoba. They referred to the Regulations, particularly No. 947. As these Regulations are more extended than the provisions of the draft Agreement, and are all that are thought desirable, the Union agreed to accept them in lieu of clause 10.

10. Provisions for Grievance Committee (clause 12) were opposed by the Company representatives. They say their practice has been, and will continue to be, to deal with each employee fairly and equitably; to hear and discuss any grievance or complaint of any employee or group of employees personally or with the solicitor, agent, committee, or Union, with the object of satisfying all concerned. But the Company will not recognize any "Grievance Committee" as such. This position is satisfactory to the Union.

11. The only remaining clause (clause 11) is that dealing with the classification of employees, and the Rates of Wages attaching to each class.

The classifications set forth in the draft agreement were found to be inaccurate. The Company representatives, at our next meeting, then brought in a new record of classification, but this also was found unsatisfactory. Finally, at the suggestion of the Board, another classification was prepared, and was acceptable to both parties. It sets forth each class of employment, with the number of employees in each—both male and female—and the rates of wages now paid to each employee therein. When this was fully discussed and considered, item by item, it was accepted by the Union representatives as satisfactory in every detail. It is fair to say, however, that a few of the wage rates were considered by the Union to be a little low, but this was more than offset by other items in which the wage rates were higher than the Union had requested.

Report of Conciliation Board in Dispute between the Grimsby Stove & Furnace Co., Grimsby, Ont., and Local 805, International Union, United Automobile, Aircraft and Agricultural Implement Workers of America (CIO-CCL)

On August 30, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, J. T. Weir and J. S. Midanik, both of Toronto, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:

The Board of Conciliation appointed by you met at Toronto on May 29 and 30, 1947, with Mr. R. E. May, Counsel for the company and Mr. Charles Tanner, representative of the International Union (UAW-CIO), and subsequently on June 6, 1947, again with Mr. Tanner and with Mr. T. A. Sims, President and General Manager of the company.

The matters in dispute, as originally submitted to the Board, were as follows: Recognition; Reservation of Management Rights; Plant Committees; and Seniority. But this list would seem to be incomplete in light of the views expressed by the parties to the Board.

The company has some forty employees and is engaged in the manufacture of Quebec heaters, small cook-stoves and warm-air furnaces at Grimsby, Ontario. No foremen or managers are employed, all supervisory work being performed by the owners, Messrs. T. A. Sims and A. M. Aiton, who are on a first-name basis with the employees. The operations of the company for the past thirteen years, while under its present management, have been seasonal not only because of lack of materials or orders but also because a large number of employees own small fruit farms and must attend these full time for part of the year. In fact, the company is at present shut down due to a steel shortage.

On October 11, 1945, union representatives were certified as collective bargaining agents by the Ontario Labour Relations Board following a vote. Negotiations were then entered into and a collective bargaining agreement was signed on December 12, 1945, for a period of one year. This agreement provided for a voluntary revocable check-off,

and was, in terms, similar to most collective bargaining agreements containing the usual provisions as to recognition, reservation of managements rights, grievance procedure, plant committee, arbitration, seniority, transfers and promotions, overtime, vacations with pay and wage rates. This agreement was in effect until its expiry date, December 11, 1946. It was not renewed and from that time there has been no collective agreement in force in this plant. Subsequent negotiations took place without any success, culminating in the establishment of this Board.

In the hearings before this Board it was apparent that the parties were apart not only in the details of a collective agreement but also in their viewpoint as to the fundamental principles underlying collective bargaining.

The company's position, as advanced first by Mr. May and subsequently by Mr. Sims, was that there were special circumstances peculiar to this case which made it inappropriate to enter into an agreement similar to the previous one. The basis of this contention was the smallness of the company, the very close personal relations between employer and employee and the fact that the company continuously competes for the employee's services against the use he can make of his own time on his own farm. This latter contention is particularly applicable to the more highly skilled workers in the plant, and the management contends that they must be in a position to pamper such employees even at the expense of the usual seniority clauses and other rights accorded to all workers.

The company also feels that there is no necessity for a union in this particular plant and that some of the more highly skilled workers whose services the company wishes to retain at all costs are not in sympathy with the union, that the union has tended to alienate such employees and caused them either to seek work elsewhere or to devote more time to their farms. The company also submitted that employer-employee relations have deteriorated considerably since the union has come into the plant and that the union has done nothing for the employees except create strife and bad feelings.

However, the company did indicate that it was willing to sign some sort of contract. The Board feels that such willingness was in effect nugatory, as the provisions to which the company would agree would result only in an emasculated and meaningless collective

bargaining agreement. For example, the Board finds it difficult to ascertain the value of rehiring, promotion and seniority clauses which would take these matters out of the realm of bargaining and grievance procedures and leave them completely at the whim and discretion of the company. It is regrettable to the Board, but it seemed that the company's attitude was, in the main, to concede to the union only such provisions as the law would compel them to incorporate in an agreement.

The union's position is that it is the certified collective bargaining agent of the employees, and is entitled to have the company bargain collectively with the union representatives in good faith. The union requests that the company enter into an agreement similar, except in minor details, to the agreement previously in force between the two parties.

The union emphasized that this agreement is similar in terms to many other plants both in the Niagara district and throughout Canada. It was pointed out that the union security requested here was only a voluntary, revocable check-off and that such provision, or more stringent variations, were common clauses in agreements. The union felt that the company was adopting the outmoded attitude that it was not the business of the employees or of the union to "interfere" in any way with management's prerogative of unilaterally fixing wages, hours and working conditions.

The Board endeavoured to conciliate the differences between the parties, but has not succeeded in reconciling them as to matters of

principle. Public policy, as indicated by legislation, conciliation board reports, and the majority of employer-employee relations throughout the country, would seem to indicate clearly that bargaining collectively in good faith and a resultant collective bargaining agreement giving employees substantial rights is good industrial relations. The company's submission that there were special circumstances in this case has been dealt with. In view of all other circumstances, the Board is of the opinion that the company's attitude is not entirely warranted, and the Board does not agree that an appropriate collective bargaining agreement should be limited to the terms suggested by the company.

The conflicting viewpoints of the parties are such that the Board can see no point in making detailed recommendations as to the clauses which should be included in any collective bargaining agreement between the parties although it is the opinion of the Board that the agreement previously in force is not an unreasonable one and, with some simplification and certain minor changes, it is one which could well be signed by the company.

Although the efforts of the Board appear to have been fruitless, it wishes to express its appreciation of the frank and courteous attitude of all parties to the negotiations.

All of which is respectfully submitted, dated this 28th day of August, 1947.

(Sgd.) A. COCHRANE,
Chairman.

(Sgd.) J. T. WEIR,
Employer's Nominee.

(Sgd.) J. S. MIDANIK,
Employees' Nominee.

Report of Conciliation Board in Dispute between Northern Electric Co. Ltd., Toronto, Ont., and Local 4, United Telephone Workers of Canada (CCL)

On August 1, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: J. D. McNish, K.C., Toronto, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, C. W. Findlow and Elroy Robson, appointed on the nomination of the employer and employees respectfully.

Final Report

Toronto, Ont.,
July 31, 1947.

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ont.

Re: Northern Electric Company

Dear Mr. MINISTER:

I have been notified that the parties have now reached an agreement on all points

formerly submitted to the Board of Conciliation. Our previous report which was forwarded as an interim report may now be treated as the final report of the Board of Conciliation.

Yours truly,

(Sgd.) J. D. McNISH.

Interim Report

To:

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

The Board of Conciliation established to deal with the above dispute begs to submit its report.

The Board met the parties in Toronto on May 23, 1947. The Company was represented by—

Mr. H. McD. Sparks, Manager Industrial Relations.

Mr. J. R. Sim, Manager Toronto Telephone House.

Mr. W. Gerard, Personnel Supervisor Toronto Telephone House.

Mr. C. A. Peachey, Works Manager—Montreal.

Mr. C. H. Sprague, Division Superintendent Industrial Dept., Western Division.

And for the Union—

Mr. R. G. Geddes, General Representative.

Mr. Gerrard Hawkshaw, Mr. David M. Erskine, Mr. Alex Allman, Mr. Oban Pezzack, Members of Bargaining Committee.

On this date the Board heard detailed representations from both parties and at the conclusion of the hearing the parties requested an opportunity to explore further the possibilities of reaching an agreement between themselves and requested that they be given until May 29 for this purpose. Unfortunately on May 28 the Board was advised by the parties that they had been unable to reach a settlement.

The Board then proceeded to deal with the matters in dispute. The members of the Board received with their appointment a report under date of April 3, 1947, from H. Perkins, Industrial Relations Officer, to the Minister of Labour for the Province of Ontario. In this report it was stated that there were nine items then in dispute between the parties and unsettled. However, when the parties appeared before the Board on May 23, 1947, it was agreed by them that only four matters were actually in dispute and with which the Board was called upon to deal, viz.:—

1. Wages.
2. Union Security.
3. Vacations with pay.
4. Overtime.

The Company operates plants in both the City of Montreal and in the City of Toronto and has a total payroll of approximately 13,000 employees. The Union was certified as the bargaining agent for both hourly rated and office employees on the 28th of August, 1946 by the Ontario Labour Relations Board which certification was confirmed by the National War Labour Board upon appeal by the Company.

It appeared from the aforementioned report of Mr. Perkins that in so far as the office staff was concerned the Company had in hand a job evaluation program which was not then completed. At the hearing before this Board the parties agreed that all questions relating to the office staff should be left in abeyance to be dealt with by this Board in the event

that the parties could not reach an agreement when the job evaluation then in progress had been completed.

Upon this agreement the Board then proceeded to deal with the matters in dispute affecting hourly rated employees of whom 385 were affected and 300 of whom were members of the Union.

WAGES

While there were only 385 members of the Union in Toronto affected by this dispute, the Company has 13,000 employees in the Toronto and Montreal plants. The Board took this into consideration in arriving at its conclusions. The Company has a complete schedule of job classification and rate ranges and the Board had the benefit of considering this schedule.

It appeared from the evidence submitted that since the 16th of February, 1944 only two general increases in wages had been given by the Company to its employees (that is other than increases to individual employees within their rate classification and through merit promotion). As of September 2, 1946, the working hours were reduced upon the initiative of the Company from 48 to 40 hours and at the time this was done an over-all increase in wages of 10 per cent was then given to all of the Company's employees.

Negotiations between the Company and the Union for an agreement were commenced at the beginning of January, 1947. The Union at that time demanded wage increases of 15 cents per hour for highest rate employees, 17 cents per hour for the next class of employees and 19 cents per hour for the lower paid employees. During the negotiations the Company granted a general increase to all of its hourly rated employees of 7 cents per hour, effective as of January 1, 1947. It appeared that during negotiations some compromise suggestions were made but no agreement was reached. When the matter came to the Board the Union demanded an over-all increase of 13 cents per hour. The Union submitted figures to show that between February 16, 1944 and April 28, 1947, the weekly earnings of the lowest rated worker showed only a 64 cent gain, for the average rated worker no change and for the highest rated worker an 88 cent loss.

This question of wages was dealt with at some length at the hearing by the representatives of both the Union and the Company and at the subsequent sittings of the Board was studied exhaustively by the respective members. The members considered wage rates and classifications in force in what were alleged to be comparable industries and

considered fully the varying degrees of skill required for the respective jobs. After this thorough study and discussion by the members of the Board, the members were unable to reach a unanimous decision.

The majority of the Board consisting of the Chairman and Mr. Robson were of the opinion that the employees affected by this dispute were entitled to some increase in wages. They felt that this was necessary for these employees to meet the rising cost of living. They felt that these employees had not benefited from wage increases to the same extent as employees in industry generally throughout Canada since the 16th of February, 1944, until the present time and that at their present rates of pay they were suffering hardship as a result of the increased cost of living. They considered it very significant that the weekly earnings of these employees had not increased since February, 1944, even after the aforesaid increases granted by the Company. After taking all factors into consideration, the Chairman and Mr. Robson were of the opinion that a further increase of 8 cents per hour should be paid to all hourly rated employees affected by this dispute effective as of the 1st of April, 1947, and they so recommend.

Mr. Findlow could not agree with the other members of the Board on this question and submits a minority report which is attached hereto as Schedule "A".

UNION SECURITY

The Union has demanded the inclusion of a union shop clause in any agreement to be entered into between it and the Company and submitted its reasons therefor. The Company, for reasons given by them, objected to the inclusion of such a clause or to any other form of union security. The Company was, however, prepared to agree to a voluntary check-off clause.

None of the members of the Board were prepared to recommend the inclusion of the union shop clause but all were prepared to recommend the inclusion of the voluntary check-off clause. Mr. Findlow submitted that as this union had only been certified as the bargaining agent on the 31st of August, 1946, the first negotiations with the assistance of the bargaining unit only commenced in January of this year and so far no agreement had been reached, that it was inadvisable at the present time to include any type of union security clause in the agreement.

The Company's objection to any form of union security was based on principles no doubt sincerely held and very positively stated. The majority of the Board consisting

of the Chairman and Mr. Robson were in favour of the principle behind union security in some form and felt that even though this was the first agreement between the Union and the Company, the Company's objections would be as strongly held at the end of one year as they are today.

The Chairman and Mr. Robson are agreed that a maintenance of membership clause in the following terms should be incorporated in the agreement and do so recommend.

it is agreed that all present members of the union must retain their membership. Any present employees who are not now members but become members must retain their membership. All future employees, as a term of their employment, must become members of the union within six months from the date of their employment for the term of this and any subsequent agreement.

They make this recommendation as they are convinced that where membership of a union is secured, all the many frictions which often occur between union and non-union men in the same employment are avoided, no suspicion could arise that there has been discrimination by management between union and non-union workers and it removes any temptation from union leaders to whip up manufactured grievances in order to insure a wider interest in the union. They believe that a maintenance of membership clause not only helps to stabilize the union and assist it in becoming a permanent business agent for the employees in bargaining with the Company but it also stabilizes the relationship between the Union and the Company. The Union is democratically organized and at general meetings all members have an opportunity to express their views on union policies. The compulsory element in membership has, therefore, its compensation in that the employees have the opportunity to influence the action of their bargaining unit, an opportunity which is, of course, denied to them if they are not members of the union.

Mr. Findlow for reasons which he has set forth in Schedule "A" hereto dissents from the recommendation made by the other members of the Board upon this question.

VACATIONS WITH PAY AND OVERTIME

The Company and the Union were in substantial agreement on these items and the evidence with regard to the other items not agreed upon was not sufficient for the Board to recommend anything further than what the parties had already agreed upon. They accordingly recommend that any other matters beyond those agreed upon should be left for future negotiations.

All of which is respectfully submitted.

(Sgd.) J. D. McNISH,
Chairman.

(Sgd.) ELROY ROBSON,

(Sgd.) C. W. FINDLOW.

Minority Report

WAGES

I regret that I am unable to join in the recommendation made by my colleagues with respect to wage increases for the employees concerned in the dispute which was referred to us for conciliation.

As stated in the majority report the members of the Board examined the company's wage structure at some length, and made comparisons with the wage structures of other comparable companies in the same industry.

In my view the result of this study amply demonstrated that the rates of wages paid by Northern Electric Company which were the result of settlements made in September, 1946, and in January, 1947, are eminently fair in comparison to the rates of wages paid by other comparable companies. When comparing wage schedules, it is essential that such comparisons be made on a current basis, and not restricted to any specific adjustment increments which may have applied to a comparative wage schedule at any particular period.

It is my view that the employees' claim to a wage increase in this case should have been resolved by negotiation for the purpose of determining what further increase was justified in view of the increase in the cost of living which has occurred since January, 1947.

On this basis it is quite evident that an increase of 8 cents per hour is not justified. The actual amount of the increase could best be determined by the parties themselves, and I have no doubt that they would have been able to agree on an amount if the union had not persisted in attempting to improve now upon settlements which were satisfactory in January, 1947, to the parties then concerned.

My colleagues also attempt to justify their recommendations by reference to changes in net weekly income of the employees concerned.

I do not agree that they have made a proper comparison, and I would point out that out of the 385 employees concerned in this case, 32 per cent of them have been employed within the past eight months, and these new employees are still progressing through the company's automatic rate progression program, and it is not fair to compare the present average rate of the large group with

the average weekly income of this smaller group as of February, 1944.

If a proper comparison is made by taking those employees who were employed in February, 1944, and comparing their present weekly earnings with the earnings as of that date a much more favourable picture is presented.

In any event I fail to understand why my colleagues place such emphasis upon weekly earnings or weekly take-home pay in this case, due to employees having been granted a 40-hour week instead of the previous working week of 43½ or 43¾ hours which was in effect immediately prior to the inauguration of the 40-hour week, inasmuch as this arrangement maintained the weekly take-home pay, with employees receiving in addition, payment for eight statutory holidays.

If the situation were reversed and the Northern Electric Company was seeking to justify present hourly rates of wages by comparing income on a 48-hour basis with the income of employees generally on a 40 or a 44-hour basis I feel quite sure that my colleagues would not consider the comparison appropriate.

In my view it is equally inappropriate in this case where the company has reduced the working hours to 40; and the only proper test in considering the question of whether employees of this company have fared as well as employees in industry generally is to compare hourly rates of employees now engaged as against the rates of the same employees at an earlier period.

On the matter of wages, therefore, I must dissent from the recommendations of my colleagues, and I recommend that the parties resume negotiations in an attempt to determine what actual rate increase would be justified in view of the increased cost of living since January, 1947; further, in view of the fact that an increase of 7 cents per hour became effective on January 7 last, it would seem only reasonable that any further increase agreed upon be made effective, not earlier than six months from that date.

UNION SECURITY

I am also unable to agree with the recommendations made by my colleagues on this Board with respect to union security. My colleagues state that they are in favour of the principle behind union security in some form. With great respect I would point out that they have failed to state that principle, and I can only presume that they mean that all employees are ultimately to be compelled to join a union whenever it achieves collective bargaining status.

The following excerpt taken from the company's brief expresses a point of view with which I find myself in complete agreement.

From their inception Labour Unions have fought ceaselessly for the right of the individual to join a Union, free from fear of reprisals on the part of his employer. Having achieved this right, supported by adequate legislation, a Union Shop agreement would now deny the right of an individual to abstain from Union membership without suffering automatic reprisals from both Union and Company. In entering into such an agreement Management would be signing away some of the rights and freedom of individuals; rights similar to those fought for by the Unions themselves; rights not only of employees but of all potential employees. The authority of Management to do this can be challenged seriously on moral grounds.

Quoting further from the company's brief, the following is also very pertinent to this case.

It is evident that Labour Legislation enacted in recent years has favoured, encouraged, and assisted Unions. However, it is extremely interesting to note the views of the Dominion Government with respect to "excluding any citizen from employment because he does not belong to a particular Union."

The following is a quotation:

THE LABOUR GAZETTE
MARCH, 1945

GOVERNMENT POLICY ON LABOUR RELATIONS IN
CROWN COMPANIES

The Canadian Government has issued a statement of policy regarding labour relations in Crown Companies, the text of which is as follows:—

1. The Government's attitude, in the following respects, is the same whether a company is publicly or privately owned.

(a) concerning the right of Labour to organize;

(b) concerning any agreement between management and a union so long as it is not contrary to the public interest.

2. In private companies, the content of a collective agreement is a matter to be determined by the management and labour in the light of conditions affecting the particular industry.

In Crown companies, the content of an agreement is likewise a matter to be determined by the management and labour on the same principles.

3. Broadly speaking, except where provision is made for preferential treatment, as in the case of war veterans with overseas service, all citizens of Canada have equal rights in the matter

of employment in government undertakings. As Crown companies are owned by the public, their directors are expected to be careful to see that no provision is included which would create discrimination as between one employee and another, or which would have the effect of excluding any citizen from employment therein because he does not belong to a particular Union.

I would require some very tangible and concrete evidence that the program advocated by my colleagues, would be beneficial to industry before I could subscribe to such a principle. There has been no such evidence presented to us, and in any event in the present instance there would be little basis for discussing even the general principles involved.

The situation in this case is simply one where approximately 3 per cent of the company's total working force has chosen bargaining representatives different from those which represent the bulk of the company's employees.

A major issue with respect to the basis for settling wage rates has developed between the representatives of this small group of employees and the company. Under these circumstances my colleagues have suggested that the company should assist the representatives of this small group in their organizing campaign.

It is quite evident to me at least that the union involved in this case is attempting to make collective bargaining the means for the organization and expansion of the union instead of making of the union the means for assisting the employees to bargain collectively with the company.

In my view it is absurd to suggest that while the company and the union find themselves in substantial disagreement on wage policy that the company should be asked to assist the union in its organizational activities.

I am convinced that if the union in the present case had taken a more realistic view of its bargaining position that it could have resolved the wage differences between the company and itself as indicated above, and that they would not have put forward any claim for union security.

All of which is respectfully submitted.

(Sgd.) C. W. FINDLOW.

Appointment of Industrial Disputes Inquiry Commissions under Wartime Labour Relations Regulations, P.C. 1003

Canada Steamship Lines, Ltd., Colonial Steamship Co., Ltd.
and Sarnia Steamship Co., Ltd.

THE August issue of the LABOUR GAZETTE contained a report of the appointment of Mr. Leonard W. Brockington, K.C., C.M.G., of Ottawa, as an Industrial Disputes Inquiry Commission in connection with

differences between the Canadian Seamen's Union and Canada Steamship Lines, Ltd. of Montreal, P.Q., and the Colonial and Sarnia Steamship Companies, Ltd., of Port Colborne, Ont.

The dispute arose out of the alleged non-fulfilment of the terms of a collective agreement entered into between the parties on September 3, 1946. There were three main issues involving preferential hiring of members of the Canadian Seamen's Union, grievance and arbitration procedure, and the issue of passes to duly appointed shore delegates.

In his conversations with the parties and again in his report to the Minister of Labour, the Commissioner proposed the following formula as the basis for a settlement:—

1. "All public recriminations concerning alleged breaches of the Agreement of September 3, 1946, shall be discontinued.

2. "The acceptance of the terms of this proposed settlement shall be without prejudice to the right of either party to advance any argument in the case of renegotiation of the present Agreement or the negotiation of a new one.

3. "In the matter of so-called preferential hiring both parties agree to abide strictly by the terms of the Agreement dated September 3, 1946. The Company, on its part, will re-instruct its Masters and Chief Engineers that the Agreement is to be strictly fulfilled while the Union reiterates on its part its willingness and determination to make available to the Company competent personnel when so requested and to permit no discrimination in the matter of the hiring of available men against either of the Companies concerned in the present dispute.

4. "In case of grievances that may arise out of the Agreement in the future, both parties agree to follow the procedure laid down in the document dated September 3, 1946, or by mutual consent hereby given to refer the matter in dispute for final decision to the present Commissioner whom both parties desire to continue in office and exercise general powers of mediation to the end of the term of the Agreement.

5. "In the matter of shore delegates, it is agreed between the parties

(a) that every shore delegate shall be a citizen of Canada;

(b) that the Union, in making application for a pass will provide information concerning the name and address of the delegate, the fact of his Canadian citizenship and the office, if any, which he holds in the Union.

6. "The proposed shore delegate shall sign or cause to be signed and shall present to the Company a waiver in a form acceptable to the legal advisers of both parties indemnifying the Companies against liability in the case of his injury or death. In addition, the

proposed shore delegate shall agree in writing that during his visit to the ship he will not engage in any political activities or propaganda nor in advocating nor in attempting to further any political system or ideology, whether Communistic or otherwise, nor in fact, in any activities other than the receipt of Union dues, the hearing of grievances, and what is generally recognized as legitimate Union business.

7. "It is understood and agreed that any breach by any shore delegate of the provisions of the last preceding paragraph may be followed by an immediate cancellation of the pass and in addition to the cancellation of the pass, the Union will take disciplinary measures.

8. "Both parties and their representatives during the currency of this Agreement will refrain from further provocative public statements concerning the other.

9. "In view of the admitted and regrettable deterioration of certain personal relations the Commissioner will discuss with the Union any possible restriction in the matter of the nomination by the Union of shore delegates. If such restriction is considered desirable it shall be dealt with by correspondence and agreement between the Commissioner and the Union officials."

The proposed settlement suggested by the Commissioner was not immediately acceptable to the employing Companies. Further conferences were then held between the Minister and Deputy Minister of Labour and representatives of the Canadian Seamen's Union and of the three Companies. On August 22 the Minister of Labour announced that a settlement had been reached as a result of these conversations, and that the differences between the parties had been adjusted.

The agreement was based partly upon the recommendations of the Commissioner and partly on the discussions between the representatives of the Department of Labour and the interested parties.

The actual terms of the settlement were as follows:—

1. "If a satisfactory application for shore delegate passes is agreed to as per sample, the Companies will issue the passes within one week from the date on which the application, with waiver form, reaches the Company.

2. "The Companies agree to a vote supervised by the Labour Department being taken just as quickly as the Department can arrange for the purpose of deciding if the majority of the non-licensed members of the crews of its vessels desire the Canadian Seamen's Union to

be the bargaining agent to negotiate a collective bargaining agreement for the 1948 season and, if the vote shows a majority in favour, the Companies will accordingly bargain in good faith with the Canadian Seamen's Union.

3. "The Companies reaffirm their acceptance of the terms and conditions contained in those paragraphs of Commissioner Brockington's report which he states were agreed to by both parties, said paragraphs being numbered 1 to 4 inclusive, also to the terms of paragraphs 5, 6 and 7 subject to use of the draft shore delegate pass-application form referred to in this memo; also to the terms of paragraphs 8 and 9 of Commissioner Brockington's report of August 11, 1947.

"The application form which will be made for shore delegate passes will be as follows:

**'Form of Application for
Passes for Shore Delegates**

"The undersigned officers of the Union hereby apply for a pass as a shore delegate as provided for under Section 8 of the Agreement of September 3, 1946 for.....
Address

(1) 'We certify that no action will be taken by him contrary to the general purposes of the Agreement which is "to provide for the profitable operation of the Company's vessels in the mutual interest of the Companies and its employees."

(2) 'We attach a waiver agreement signed by the man for whom we are applying for a pass indemnifying the Company against liability in the case of his injury or death.

(3) 'We apply for said pass on the condition that person to whom same is issued shall not, during his visit to a ship, engage in any political activities or propaganda nor in advocating nor in attempting to further any political system or ideology, whether communistic or otherwise, nor in fact, in any activities other than the receipt of union dues, the hearing of grievances, and what is generally recognized as legitimate union business.

(4) 'We certify that, during the War, he was either in the Armed Forces or in the Merchant Marine.

(5) 'The Union keeps no record of political beliefs of its members, consequently, an unqualified certificate as to the applicant's political or ideological affiliations cannot be given; however, to the best of the knowledge of the union the applicant is neither a Communist nor a Communist Agent.

(6) 'It is agreed that any breach by any shore delegate of the provisions of paragraph numbered three of this application may be followed by an immediate cancellation of the pass, and, in addition to the cancellation of the pass, the union will take disciplinary measures.

Signed on behalf of the Canadian Seamen's Union

*'Certification by Person for whom
pass is requested*

1. 'I certify that I am the person who has signed waiver form attached.

2. 'I agree that I shall not, during my visit to a ship, engage in any political activities or propaganda nor in advocating nor in attempting to further any political system or ideology, whether communistic or otherwise, nor in fact, in any activities other than the receipt of union dues, the hearing of grievances, and what is generally recognized as legitimate union business.

3. 'I certify that I am a Citizen of Canada and neither a Communist nor a Communistic Agent.'

In announcing the agreement reached between the parties, the Minister of Labour expressed himself as being very pleased with the happy outcome of the negotiations, and expressed great appreciation for the services of Mr. Leonard W. Brockington as Commissioner, and for the assistance of Mr. Percy Bengough, President of the Trades & Labour Congress of Canada. He stated that it was quite evident during the discussions that there was a strong desire to avoid any interruption of traffic on the Great Lakes, and a realization by the parties that such an interruption would be very detrimental to the welfare of Canada. He stated that the agreement was another evidence of the fact that good employer-employee relations can be established if frank discussions of problems take place and if there is a willingness to achieve settlement and a spirit of give and take during negotiations.

It was also announced that, with the concurrence of the Minister of Labour and the consent of the Commissioner, and upon the request of both parties, Mr. Brockington would continue to act in the capacity of Commissioner until the end of the term of the existing agreement on December 31, 1947, in order to adjust any difficulties in connection with the details of the settlement, if found necessary.

Lounsbury Company, Limited, Moncton, N.B.

The appointment of Mr. W. F. Lane, Police Magistrate of Moncton, N.B., as Industrial Disputes Inquiry Commissioner to investigate a complaint that the Lounsbury Company, Limited, Moncton, N.B., had dismissed an employee because he was a member of the International Association of Machinists, was reported in the June issue of the *LABOUR GAZETTE*.

The report of the Commissioner, recently received, stated that the man in question had been an employee of the Lounsbury Company, Limited, for some ten years. The greater part of his service had been with the Sackville Branch of the Company and he had been employed at the Moncton Branch for only a year or so. The International Association of Machinists had become active in Moncton in January of this year. Several organization meetings were held about that time and these meetings were attended by some of the Lounsbury Company's employees. The employee involved in the inquiry had joined the union in February 4 and on February 15, 1947, was served with a Notice of Separation which became effective two weeks thereafter.

A careful reading of the evidence indicated that several officers of the Company attempted to discourage its employees from joining the International Association of Machinists. It was common ground that the Company called a general meeting of its garage employees when it became aware of the activities of the union; that these employees were asked what they expected to get by joining the union, whether it was more pay and shorter hours; that they were told that the Company could do more for them than the union; that they were advised to join a shop union, where there were no dues to pay; and that they were warned not to sign any papers unless they knew what they were signing. The evidence also showed that several of the employees, including the person involved in the Commissioner's investigation, were called into an office and interviewed privately about the matter of joining the union. At these interviews the officers of the Company continued their arguments against the advisability of joining the union.

The Company admitted that seven employees in all were dismissed in February of 1947, but insisted that neither the mechanic in question nor the others were discharged because they had become members of the union. The Manager of the Motor Division

of the Company stated that the men were let out because of a shortage of work. He went quite thoroughly into the matter of the number of employees on the payroll during the winter months of 1946 and 1947. The Commissioner found that the only logical conclusion that could be drawn from the figures submitted was that the Company had too many employees in its Motor Division during the months of January, February and March, 1947, for the amount of work that was offering.

Of the seven men discharged in February, 1947, only two were re-employed. No mechanics were taken back.

The Company Manager stated in evidence that when he made the decision as to the men who were to be discharged, he was not aware that one, or any of them, was a member of a trade union. If he had been aware of that fact, he did not think that it would have influenced his decision in any way. One factor involved in the decision to discharge the particular man in question was "a rather nasty comment" which that person had made.

In his report the Commissioner then analysed the evidence in some detail. He found that the union had failed to substantiate its complaint that the Company had dismissed the employee involved for the reason that he was a member of a trade union. It was without doubt rather odd that the Company should have dismissed several of its employees at a time when an effort was being made to unionize them. The complainant had shown quite conclusively that several officers of the Company were hostile to the union. However, the scope of the inquiry was confined to the question of discharge or discrimination, and the provisions of the "Unfair Practices" section of Order in Council P.C. 1003 were not included in the Commissioner's terms of reference. There were at the time two good reasons why the man in question should have been dismissed, namely, a shortage of work and the nature of the remark attributed to him. Notwithstanding the coincidence of the dismissals with the process of the organization of the union, the Commissioner could not find against the Company on the evidence given, and he recommended that no action be taken by the Minister of Labour with regard to the employee's dismissal.

Conciliation Work of the Industrial Relations Branch during August, 1947, under the Conciliation and Labour Act

OFFICERS of the Industrial Relations Branch dealt with 6 industrial disputes during the month of August, involving 367 workpeople employed in 7 separate establishments. Of these, only one was a new dispute which originated during the month and 5 were situations which had been terminated as of July 31, and received further attention in August. These disputes were dealt with under the provisions of the Conciliation and Labour Act. They were thus distinct from and in addition to the conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton, N.B. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

Summaries of the cases of chief interest follow:—

Metal Miners, Bralorne, B.C.—During July the Minister of Labour appointed Mr. R. K. Henderson, of Nanaimo, B.C., as an independent Arbitrator to deal with a dispute between Bralorne Mines, Limited, Bralorne, B.C., and the International Union of Mine, Mill and Smelter Workers, Local No. 271. The appointment was made upon the joint request of both parties in accordance with the provisions of their collective agreement.

The Arbitrator reported that the dispute arose through the company's discharge of a man who was at the time the Financial Secretary of the Local Union. The dispute centred on whether the dismissed employee had been discharged by reason of his activities as Secretary of the Local Union or for absenteeism, and whether he had received the same treatment as other employees in similar circumstances.

The Arbitrator heard evidence of the employee's attendance record and as to the warnings issued to him on different occasions prior to his dismissal. The Arbitrator's finding was that the man had abused certain privileges regarding leave of absence when on union business, that he had received ample warnings which he had ignored, and that the company acted in its right in dispensing with his services.

Food Products Workers, Winnipeg, Man.—The Minister of Labour during June, 1947, appointed His Honour Judge J. M. George, of Morton, Man., as third member and Chairman of a Board of Arbitration to deal with a dispute between Burns and Company, Limited and the employees of its Winnipeg plant represented by the United Packing-house Workers of America, Local No. 224.

The appointment was made upon the joint request of the parties in connection with a disagreement over the interpretation of the provisions of their collective agreement. The other members of the Board were Mr. Henry B. Monk, K.C., and Mr. George Stapleton, both of Winnipeg, who represented the company and the union respectively.

Separate reports made by each of the members of the Board were received by the Department of Labour during August. The findings of the Chairman and the employer's representative upheld the position taken by the company, while the union's nominee dissented. Because of the general interest which may attach to the issue involved, the report of each member of the Board is reproduced below, with minor excisions.

The Reasons for Decision of the Chairman were as follow:—

The Union, in its notice to the Company, submitting its grievance to arbitration, dated April 15th, 1947, definitely states its grievance, first in the heading to their letter, as follows: "Re: Grievance submitted by Local 224 U.P.W.A. to Burns and Co., Winnipeg, Man., in respect to employees who are laid off and later re-hired and put on a lower rated job, do not carry their previous rate for six weeks", and then in the letter proper the following statement: "The Union contends that when these employees are re-hired they should carry their former rate for a period of six weeks, as stipulated in Schedule A.

"From the above it would appear that the Union is quite within its rights in requesting an arbitration, and the Board having been set up, has full jurisdiction to consider the grievance complained of.

"The Grievance complained of has particular reference to Schedule A of the Agreement between Burns and Co. Limited and The United Packinghouse Workers of America, C.I.O., dated October 1st, 1946, section (f) of which reads as follows:—

'If an employee is transferred to work where the job rate is lower he shall receive his regular rate for a period of six (6) consecutive weeks while on the assigned work after which the lower job rate shall prevail.'

"In considering this grievance the Board is definitely limited by Section (b) of Article 14 of said agreement which reads as follows:

'The matters and things to be considered by such Board shall be restricted to the provisions of this Agreement, and any decision shall be based and determined

solely on such provisions and shall not change, add to, vary or disregard the same.'

"Reasons for a decision in this case, I regret, must of necessity be technical, due to the limitations placed upon the Board by the above mentioned paragraph. The Board has been pleased to place no limitation on the submission made by both parties, whether relevant or not, and such submissions have been of considerable assistance to us in giving us a picture of the operation of the agreement, according to each party's interpretation thereof, thereby giving us a background for the formation of our reasons for arriving at the decisions we have.

"Reference may be made in this judgment to these submissions and comments made on matters contained in same, which may be irrelevant to the point in dispute, but the final judgment herein, must, and will be based on the provisions of this agreement, irrespective of the fact that any comment we may make, might intimate that the operation of the agreement according to its interpretation thereof might have proved a hardship to either one or other of the parties concerned, as contended by each or either one.

"A careful study of the paragraph in question, namely (f) of Schedule A and of the arguments presented, convinces us that a proper interpretation of said paragraph is dependent upon an interpretation of the words 'employee' and 'transferred' used in the first line thereof. An interpretation of these words involves a study of certain other provisions of the agreement, as the agreement must be all read together, and no paragraph singled out without showing its relationship to other parts of the agreement. This contention is borne out by the submissions of both parties.

"The Union contends that when once an individual is hired by the Company, he is termed an 'employee' and continues to be so termed, until actually discharged, or ceases any connection with the Company on his own volition, or remains unemployed by the Company until his seniority rights have expired under Article 10 of the Agreement. That because such individual, while laid off, is referred to in said Article 10 as an 'employee' he should therefore be recognized by the Company as such, in the literal sense of the term, and that that interpretation should be carried into paragraph (f) and thereby entitle a man while laid off, and still enjoying seniority rights to the full benefits of said paragraph (f).

"The Company on the other hand, contends that when an employee is laid off, the contract of employment has been broken, and that the only rights that such former employee has is the right to be re-employed when such opportunity presents itself, and to his seniority rights if so re-employed within the periods specified in Article 10, and supports such argument by stating that no reference whatever is made to wages in said article, and further by reference to Article 7 which states that 'Provisions in respect to wages are set out in Schedule A attached hereto and forms a part of this Agreement.'

"Let us look first at these arguments and the sections to which they refer.

"It is the undisputed right of the Company to lay off employees from time to time as circumstances require, and it is not the duty of this Board to enquire into the reasons or justice of such lay-off even although such question has been raised by the submission of the Union, but only to decide whether or not, on re-employment, those employees have been treated with respect to wages in accordance with the terms of the agreement.

"I might add in passing that according to the typical examples of certain individual employees laid off and re-hired, given in the submissions made, that there appears to have been no attempt made by the Company to abuse the privileges of the agreement as intimated in the submission of the Union, and that the Company has been abiding by their interpretation of the agreement.

"Now with regard to Article 10, in this article the term 'employee' is frequently used, and in some instances with reference to former employees who are on lay-off which might indicate that the term employee was intended to include not only those actually at work, but also those formerly at work but temporarily laid-off and still enjoying privileges under the seniority clause. If that were so, it might further be extended to include those formerly employed and who might have been laid-off long enough to lose their seniority rights and yet at some time thereafter be recalled by the Company. Surely these latter could not still be termed employees, as they are under no obligation to the Company nor the Company to them. Yet they were former employees of the Company and may be again. Admitting they can no longer be termed employees so far as this agreement is concerned, and it is impossible to consider them as such, then what justification is there in placing the individual on a lay-off with seniority rights in a different category? They are

under no obligation to the Company to return to work, even if called back; they have no existing contract of hiring with the Company, as that has been terminated by the lay-off. All they have is the right to demand seniority rights if recalled to work within a certain period. Even this right is one sided, with a privilege only to the individual, and not to the Company, who as stated above, cannot compel them to return to work. It cannot therefore be considered in any sense a contract. If there is no contract, verbal or otherwise, there is nothing that can be considered as employment. If there is no employment there can be no employee.

"What is an employee in a common sense interpretation of the term? It is one who is engaged by an employer in some class of work for which he receives remuneration. I cannot therefore justify myself in referring to a man on lay-off as an employee.

"It has been contended that there is a distinction between a man hired by a Company for the first time and thereby designated as a new employee, and one who has been formerly employed and re-hired, and that the latter cannot be designated as a new employee. I can see no difference between these two. The only justification there could possibly be for such a viewpoint would be in the case of a man who was laid off from a particular job and re-hired into that same job, for both the man and the job are the same as before. This rarely happens, and is not made compulsory under the agreement, nor demanded by the Union. This would lead to a third classification of the term employee, which would, in my opinion, be unreasonable. The facts are these. A vacancy occurs, and a man is sought for the job. Preference must be given to those who have seniority rights. They all may reject the opportunity. Some other man may be got to fill the position. Whether it be a former employee or not, a new hiring contract has to be entered into, and if a new contract then a new employee.

"Article 10—Seniority—in paragraph (a) makes reference to employees being 'first' employed thereby intimating that after a lay-off his next employing would be designated a 'second' employment, in other words another, or new employment.

"In drafting any agreement it is sometimes a practice to use the same term throughout as indicating some particular thing or individual, without thought of it occasionally being wrongly used in some instances, and this appears to me to have happened in this instance,

by the word 'employee' being too loosely used.

"From the views expressed above I cannot possibly come to any other conclusion than that the word 'employee' used in paragraph (f) of schedule A does not include former employees of the Company, laid-off and re-hired, nor was such intended in the drafting of the agreement.

"This in itself should justify me in declaring that the claim of the Union must be dismissed, but I prefer to look for further justification for arriving at such a conclusion in order to leave no doubt in my mind as to the correctness of my decision.

"This brings me to a consideration of the word 'transferred' used in paragraph (f) schedule A. Transfer, according to the dictionary, means, to convey or carry from one person or place to another; a removal; the exchange of a soldier from one troop or company to another; etc. It is synonymous to the words change, move, shift, transport.

"To effect a transfer you must have something under your control which you can transfer, whether it be an object, a piece of land, or a person. An individual who is not under the control of anyone else or bound by any contract to him is a free individual, and subject only to his own wishes. This is the position of an individual who, although formerly employed, has been laid off, even temporarily, by the Company who employed him. The Company has no control over him and therefore have nothing which they can transfer. The employee referred to in section (f) can therefore have reference only to an individual employed by the Company and over whom it can exercise control by virtue of its hiring contract. The word transfer is used in this sense, and in this sense only throughout the agreement in question.

"Transferred" as used in section (f) can therefore only refer to an individual in the employe of the Company at the time of transfer, and further bears out my contention that the present claim of the Union is without foundation.

"In reading over this agreement one cannot help but be convinced that every effort was made by the draftsman to avoid any doubts as to the procedure to be followed in every case and as to the rights to be enjoyed by the parties thereto, and the employees whom the Union represents thereunder. Full details are given of such procedures and privileges.

"Each article deals with separate phases of the agreement, and apparently covers all the procedure to be followed, and rights to be

exercised under the subject matter of the heading thereof, viz.: In the seniority article, after designating all rights and obligations of the parties clause (b) states that 'In the event of a reduction of staff and in the re-hiring of employees, seniority shall apply, etc.' thus making it clear that all sections thereof are applicable, not only to those who are actually at work, but also to those who are laid-off and those who are re-hired.

"Article 7 deals with wages and states 'Provisions in respect to wages are set out in Schedule A attached hereto and form part of this agreement.'

"This means, that, for the guidance of the parties, all provisions respecting wages, including all rights in respect thereto may be found in that schedule. In that schedule no clause appears, similar to that in the seniority clause above referred to, applying clause (f) to a reduction of staff and the rehiring of employees, but leaves it limited to employees only. In fact wages can only be applied to those who are employed. Where there are no wages there can be no employment.

"If the draftsman of the agreement had not been satisfied that in each article he had designated who was to enjoy the rights provided for in each of such articles, he would have added a general clause doing so, but no such clause appears.

"In view of the above conclusion arrived at, I have no alternative but to find that the said Company has not violated the terms of the agreement by re-hiring former employees on a lower rated job without recognizing their former rate of pay for a period of six weeks as claimed by the Union."

The Reasons for Decision of Mr. Monk, the member of the Board representing the Company, were as follows:—

"On or about the 1st day of October 1946, Burns and Co. Limited and United Packing-house Workers of America entered into an Agreement in writing effective until the 31st day of July 1947. The purposes of the Agreement are declared in Article 1 to be: 'To maintain a harmonious relationship between the Company and its employees; to provide an amicable method of settling grievances or differences which might possibly arise; and to promote the mutual interests of the employer and the employees.' The Agreement deals with the rights of employer and employee and sets up procedures to deal with grievances advanced by the Union on behalf of employees of the Company. Article 7 of the Agreement relates to wages and it reads in part: 'Provisions in respect to wages are set out in Schedule A attached hereto and

form part of this Agreement.' It is provided by subsection (f) of the said Schedule A that: 'If an employee is transferred to work where the job rate is lower, he shall receive his regular rate for a period of six consecutive weeks while on the assigned work after which the lower job rate shall prevail.'

"Early in the current year a substantial number of employees of the Company were laid off and after short periods, were rehired in some instances at rates lower than that pertaining to their previous employment, and in other instances at rates equal to or in excess of the rates applicable to their previous employment. The Union contends that in rehiring men as aforesaid, and paying such men less than they had received in their previous jobs, the Company has committed a breach of the Agreement and particularly of the said subsection (f) of Schedule A, and the Union has instituted grievance proceedings which have culminated in this matter coming before this Board. The Union has further contended in its submissions that in this instance the Company did not act in the mutual interests of the employer and the employees, but acted solely in the interests of the Company and the suggestion is also made that employees were laid off and rehired at a lower rate by the Company for the purpose of avoiding the provisions of subsection (f) above mentioned. No evidence has been submitted to this Board which would substantiate this contention or would indicate that the Company has laid off or rehired any person for the purpose of avoiding any clause in the Agreement. In fact, the evidence submitted indicates conclusively that men were rehired on occasions at rates equal to that which they had been previously receiving or in some instances at rates in excess of that which they had been previously receiving.

"Both parties to this matter have called to the attention of the Arbitration Board the Articles of Agreement under which the Board is constituted and have particularly referred to section (b) of Article 14 which reads as follows: "The matters and things to be considered by such Board shall be restricted to the provisions of this Agreement and any decision shall be based and determined solely on such provisions and shall not change, add to, vary or disregard the same."

"In dealing with this matter it is necessary to interpret the said subsection (f) and to determine the extent of its application. In this respect it is relevant to consider the interpretation of the word 'employee' and the phrase 'transferred to work' as they appear in the said subsection (f) and also to examine the relationship which exists from time to

time between the Company and its workers and the Company and the Union.

"The Agreement which has been negotiated between the Union and the Company governs the employment contracts which are made by the Company with its workers and it is important to clearly distinguish between the rights which arise under the Agreement with the Union, for they are rights which the Union possesses, and rights which arise under the contract of employment with each worker, which are rights that the worker possesses. Each time a worker is hired or rehired a new contract of employment is made between that worker and the Company. When the worker is laid off his contract of employment with the Company ceases and he has no further rights or obligations under his contract, but it would appear that under its Agreement with the Union, the Company is obligated to the Union to offer to rehire workers who have been laid off in accordance with the seniority which has been allotted to them in the records of the Company. If re-employment is offered such worker, he is under no obligation to accept it and may accept or reject it at his option. If he rejects it, the Union loses any rights it may have had on his behalf under Article 10 of the Agreement, but if he accepts it a new contract of employment is made with him which the Company is obligated to the Union to make conform to the requirements of its Agreement with the Union.

"In the ordinary use of the word 'employee' it would seem that a worker would be an employee of the Company only while he had a subsisting contract of employment with the Company. After the determination of such contract by lay-off, his relation with the Company would be ended and as there were no continuing rights or obligations on the part of either the Company or the worker under the contract of employment after such lay-off, he would no longer be an employee of the Company. It is obvious that a worker can only acquire or maintain rights against the Company under the Agreement which has been made between the Company and the Union through the agency of the Union, and can maintain such rights against the Company only for the time that the agency relationship between the Union and the worker subsists. The Agreement, in its preamble, recites that: 'The Company recognizes the Union affiliated with the Congress of Industrial Organizations and the Canadian Congress of Labour as the exclusive bargaining agency for its plants' and names Local 224 as the bargaining agent for the Winnipeg plant and the clause continues: 'The Company will not bargain collectively with any other labour organization affecting employees in any bargaining unit.'

It seems obvious that the phrase 'bargaining agency for its plants' must be construed not in its literal meaning but to mean bargaining agency for bargaining units in the plants.

"Article 2 of the Agreement defines bargaining unit as being comprised of all employees on the plant payroll as distinguished from the office payroll with the exception of (1) *Watchman*; (2) *Assistant Foreman* and (3) *Foremen*. It is to be noted that the bargaining unit comprises only employees on the payroll and if the employee is laid off and is off the payroll he is no longer a member of the bargaining unit the Union represents. The Union therefore is the agent of the employee only for the time that he is on the payroll and if he is laid off, any rights which the employee may acquire through the agency of the Union, are terminated with the termination of his employment. This would not prevent the Union from exercising these rights of its own volition on behalf of such laid off worker, but it would prevent the worker acquiring or maintaining any rights in his personal capacity against the Company under the Agreement which the Company has with the Union. It would appear therefore that upon the termination of a worker's employment he has no rights against the Company and the Company has no rights or obligations to the worker but that certain rights remain vested in the Union only pursuant to their Agreement.

"Throughout the Agreement with the Union the word 'employee' is used on many occasions and it appears that the parties and the draughtsmen when using the word used the same loosely and without a precise application of the term. The precise interpretation to be awarded to the word must be governed by the context in which it is found and the intentions which are apparent from the sections of the Agreement. The Union contends that as the word 'employee' is used in the seniority article with relation to a person who has been laid off and not rehired, the same interpretation should be attributed to the word 'employee' where it appears in subsection (f) of the said Schedule A.

"The Agreement is divided into separate articles and each article, together with the Schedule therein referred to, is apparently considered by the parties and the draughtsmen of the Agreement to comprise the terms of the Agreement relating to the subject of the article. Article 10, upon which the Union founds its claim for the interpretation of the employee, deals entirely with seniority, the conditions of its accumulation and when it shall be considered broken. In the article

the word 'employee' is used loosely. It refers in some instances to a worker who is employed by the Company and in other instances to a worker who has been laid off and is to be rehired by the Company. It would appear that the distinction in these two positions was not in the minds of the parties to the Agreement when this Article was drafted and it would seem that the parties considered the word 'employee' to refer to the person or in other words, in this article it must be considered to mean an employee for seniority purposes.

"Schedule A of the Agreement is made part of Article 7, that is, the provisions relating to wages, and must be considered on the same basis as if used in that Article. The word 'employee', when it is used in relation to wages, must surely mean an employee who has not been laid off and who has a subsisting contract of employment.

"I am therefore of the opinion that the word 'employee' as it appears in subsection (f) of Schedule A should not be construed to include a person who has been laid off and not been rehired.

"It is the further contention of the Union that if a person is laid off and then rehired to a job at a lower rate that that person has been transferred. A review of the use of the words 'transfer' and 'transferred' as they appear in the Agreement would seem to give some indication of the meaning which the draughtsmen and the parties intended. It is to be noted that throughout the Agreement wherever reference is made to the re-hiring of an employee in any respect, the words 'rehire', 're-employ', 'recall' or 'called' are used. The word 'transfer' is used in several other instances but in each instance it obviously refers to workers whose employment has not been terminated and cannot be construed as referring to persons who have been laid off. . . .

"It would appear therefore that from the use of words as above mentioned, the parties did not intend the word 'transfer' to refer to circumstances in which an employee had been laid off. The word 'transfer' is defined in the Webster's Dictionary as 'cause to pass to another'. It has been shown that the Company has no rights or obligations over a worker after he has been laid off and he is absolutely free to do as he wishes in regard to employment, and it is difficult to see how there could be a transfer where there is not control over the man to be transferred. It would appear that in this Agreement the parties have recognized that workers' rights terminated on lay-off and the draughtsmen have been extremely careful to set out in

detail any rights which they wished to be available to workers after lay-off. Article 10, section (b) requires the Company to rehire workers in the order of seniority after lay-off. Article 11, section (g) provides that when an employee leaves the service of the Company for reasons other than being discharged for cause, and he has had more than six months of service, he shall receive certain vacation pay. Article 9, subsection 7, provides that an employee laid off because of reduction of staff shall receive certain guaranteed payment. Thus it appears that care has been taken in the drafting of the Agreement to set out specifically the rights which were to be available to workers after lay-off and if the parties thought it necessary to set out these special rights then it must be taken that in their contemplation no other rights existed in favour of the employee who was laid off. If it was intended that subsection (f) of Schedule A should apply where workers had been laid off then doubtless the Agreement would have specifically said so.

"It is therefore my decision that the Company has not committed a breach of their Agreement by re-hiring and paying men who have been laid off at a rate which is lower than the rate such men had previously been receiving and it is my further decision that men who have been re-hired by the Company to jobs carrying a rate lower than that paid by the Company to them for jobs from which they have been laid off are not entitled to any payment in excess of the job rate for the labour which they are performing."

The reasons for decision of Mr. Stapleton, the member of the Board representing the Union, were as follows:—

"This Arbitration Board has been set up for the reason that the Company has refused to pay employees the higher rate for six consecutive weeks when recalled after a lay-off.

"It must be remembered that this Board must confine itself only to interpretation of the Agreement as outlined in Article 14(b) Arbitration.

"I have before me two Company submissions.

"Let us examine the Company's first submission. They state that Section (f) of Schedule A is the only reference in regard to employees carrying a higher rate for six consecutive weeks for a lower paid job. This they claim deals only with transfers. Let us take for example an employee who has requested leave of absence for a specified period of time and then returns to work. Let us say also that he was receiving 90c an hour before he left and when he returned he

was immediately put on a lower paid job. This man would automatically, under the provisions dealing with transfers, receive his 90c an hour for a period of six consecutive weeks. This man has lost no seniority during his absence as specified in the agreement. . . .

"Article 10 . . . specifically states the only reasons whereby employees can lose seniority rights.

"In the case of a man recalled after lay-off, within his allowable breaks, he is called back to work according to the provisions of the agreement. This clearly establishes that he is covered by the provisions of the agreement.

"Clause (f) of Schedule A deals only with transfer of employees. When an employee is recalled to work, as mentioned above, he does not know until he arrives in the plant where he is going to be placed, but he would assume that he would return to his former job in the plant. Therefore, when he reports for work he is assigned by the Personnel Department to work on a job with a lower rate of pay than that which he formerly held; therefore, according to the terms of the agreement and the provisions thereof, this employee has accumulated seniority since his first day of employment. In other words, the time lost on lay-off has been given back to him which means that his total seniority dates from the day he first entered the employ of the Company, therefore he is of the same status as an employee who has had continuous service. Therefore I am of the confirmed conviction that these employees on recall are definitely transferred to other jobs and must under the terms of the agreement be in the same category as employees who have been in the continuous service of the Company.

"In the Company's submission they state that there is nothing contained in the provisions of the agreement for employees on lay-off relative to wage rates.

"The Union is not arguing the status of employees who are still laid off but those who are recalled before their allowable break has expired. It is my opinion that the Company's submission as mentioned above is irrelevant to this dispute. The Company's statement however that an employee who is recalled must accept employment offered is correct, if he wishes to retain his seniority rights as outlined in the provisions of the Agreement.

"Let us turn to the Company's submission and let us also turn to Section (f) of Schedule A of the agreement, which states: 'An employee transferred to work . . .' Let us

assume then an employee has been recalled and reported to the Personnel Department; we are all aware that he has now accumulated all his seniority rights with the Company; the Company then assigns him to a job that is a different one to which he previously held. This is definitely a transfer to work for the simple reason that this man is in exactly the same category as an employee who has been in the continuous service of the Company.

"The Company states . . . that the employees recalled and put to work at different jobs to which they previously held is not a direct transfer. I have mentioned previously that the status of these employees, once they report back to work, is the same as that of those who are in the continuous employ of the Company. Therefore when one of these employees was directed to work that is different to that which he previously held, it is a direct transfer. In summing this up—an employee who has met all the provisions of the agreement would automatically be covered by all the terms of said agreement.

"The Company's submission where they show instances of employees recalled at a higher rate than they previously held, would bear out what is stated in Clause (d) of Article 10 of the Agreement, which specifically states that if an employee is transferred permanently—in other words, the Company recognizes direct transfers on recalls. The Company's own submission bears this out. Therefore if Section (d) is applicable to recalled employees, (f) must also be applicable to recalled employees. In the Company's submission they specifically name employees who were recalled and definitely placed on a higher rated job. . . .

"Let us now refer to the second submission of the Company. . . . We agreed in our meeting of July 17th in the afternoon that there are several points in all submissions that actually have no bearing on the case at issue and the greater part of page 2 of the Company's submission is dealing directly with employees who are still laid off. The Union

also makes mention of this in their submission. I think, however, that these statements in both submissions may be controversial, but I do not think we should consider them in our deliberations for the reason that we are dealing strictly with the interpretation of the Agreement in regards to recalled employees.

"Referring to the statement of the Company . . . the Company further submits 'That an employee re-hired to a new job, he is not transferred, as alleged by the Union.' I mentioned previously in the Company's first submission, dealing with employees who are recalled and assigned to a higher rated job, and Section (d) of Schedule A would apply, which definitely states that the employee is transferred. Therefore Section (f) would also apply in the reverse. That is, employees recalled and transferred to a lower rated job.

"In conclusion, we are restricted to the provisions of the Agreement and any decision shall be based and determined solely on such provisions and shall not change, add to, vary or disregard same.

"The company stated in its first and second submission that employees were rehired or recalled to higher rated jobs; that the Company did pay the higher rate. This could only be done according to section (d) of Schedule A Wages. I am sticking strictly to the provisions of the agreement; therefore, if section (d) is applicable, so must Section (f). We cannot separate the two. It is worthy to note that Section (d) specifically mentions transfer; how else would a recalled employee be put on a higher rated job. Therefore, I contend that when a recalled employee is put on a higher rated job as substantiated by the Company's submission, the provisions of Section (d) apply. If on the other hand other employees are recalled to a lower rated job, then Section (f) applies. The Agreement provides for no other practise. We are therefore bound to recognize and accept the provisions as stipulated and bring in a decision along those lines.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the **LABOUR GAZETTE** from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts are summarized in separate articles following this.

Manufacturing: Vegetable Foods

TORONTO, ONT.—ROWNTREE COMPANY LIMITED AND THE UNITED BAKERY AND CONFECTIONERY WORKERS, LOCAL 461 (RETAIL, WHOLESALE AND DEPARTMENT STORE UNION, CIO).

Agreement to be in effect from November 21, 1946, to November 21, 1947, and thereafter from year to year subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees. All eligible employees may become or may refrain from becoming members of the union. There shall be no discrimination, interference, restraint or coercion by the company or the union, either because of membership or non-membership in the union.

Hours of work: 8½ Monday through Friday, a 43¼ week. A 10-minute rest period for males and a 15-minute rest period for females is allowed each morning and afternoon. Overtime: time and one-half for all hours worked in excess of the regular hours and for work on any of 6 specified statutory holidays in addition to the regular rates of pay for these holidays when not worked. Tradesmen only who work Sundays or on holidays other than the 6 specified ones shall be paid at double the regular hourly rates.

Vacation: one week with pay equal to 2 per cent of earnings during previous year to those with 3 months' service with the company; employees with more than 5 years' continuous service with the company shall receive an additional day with pay equal to ½ of 2 per cent for each year worked over 5 up to 10.

Hourly wage rates: females, starting rate 42½ cents, after 25 days' work 45 cents, after 50 days' work 47½ cents; males, grades D1 to A minimum 62 to 77 cents for day rates and 66 to 81 cents for shift work, increased by 3 cents per hour to merit maximum. Other

classes include millwrights 86 cents, engineers, third class 87 cents, carpenters 90¼ to 92¼ cents, pipefitters 92¼ cents, mechanics 86 to 94¼ cents, electricians 97 cents; youths (under 18½ years) 50 to 55 cents. A night shift differential of 4 cents per hour will be paid workers rotating on the 3 shifts.

To female employees who have completed their probationary period of service the company will furnish free 2 uniforms annually, these to remain the property of the company. To male employees engaged in delivery work only the company will continue to supply certain articles of clothing periodically.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Tobacco and Liquors

MONTREAL, P.Q.—W. C. MACDONALD INCORPORATED AND THE TOBACCO WORKERS' INTERNATIONAL UNION, LOCAL 235.

Agreement to be in effect from April 22, 1947, to April 22, 1948, and thereafter from year to year subject to notice. This agreement is similar to the one previously in effect and summarized in the **LABOUR GAZETTE**, June, 1946, p. 779 with the following changes—Hours of work: 9 per day Monday through Friday, a 45-hour week. Overtime after 9 hours per day and 45 hours per week. All Saints Day is included in the regular specified holidays making 10 in all. Vacation: 2 weeks with pay after 5 years' continuous service with the company and 3 weeks with pay after 25 years' service. Wage rates to be increased by 5 cents per hour and shall be increased by 25 cents per week for each full point rise in the Cost of Living Index over the April 6, 1947, figure. Should the index decline this bonus shall be decreased by 25 cents per week for each full point of decline, but not below the index figure at April 6, 1947.

HAMILTON, ONT.—THE TUCKETT TOBACCO COMPANY LIMITED AND THE TOBACCO WORKERS INTERNATIONAL UNION, LOCAL 269.

Agreement to be in effect from July 15, 1947, to July 14, 1948, and thereafter from year to year subject to notice. Check-off: upon employee's authorization the company will deduct weekly from his pay union dues and forward same, less 2 per cent, to the union.

Hours of work: 9 per day Monday through Friday, a 45-hour week. Overtime: time and one-half for work in excess of the regular hours and for all work on Saturdays, Sundays and on 8 specified holidays (if Civic holiday is observed in Hamilton) 6 of which are paid holidays if employee works on the work day immediately preceding and immediately following the holiday. Vacation: one week with pay for employees with 12 months' continuous service with the company (salaried employees receive 2 weeks with pay), employees with 7

years' continuous service receive an additional week with pay, while those who have 10 years' service are allowed an extra 2 days with pay, those with 15 years' service an extra 4 days with pay and those with 20 years' service an extra week, making 3 weeks in all.

Hourly wage rates: company and union agree that the scale of wages presently in effect shall continue during the term of the agreement.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Boots and Shoes

TORONTO, ONT.—BLACHFORD SHOE MANUFACTURING COMPANY LIMITED AND THE NATIONAL UNION OF SHOE AND LEATHER WORKERS, LOCAL 19.

Agreement to be in effect from June 20, 1947, to May 31, 1948, and thereafter from year to year subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees. No employee shall be discriminated against or jeopardized in seniority standing, or suffer any loss of employment, because of union activities. All present and future employees of the company (excluding those who have the power to hire or discharge or are engaged in a confidential capacity) must as a condition of employment become and remain members of the union in good standing.

Hours of work: 8½ per day Monday through Friday, a 42½-hour week. Overtime: time and one-half for work in excess of the regular hours and for all work on Saturdays, Sundays and statutory holidays; no work on Saturdays, Sundays and statutory holidays except as negotiated with the shop committee. Vacation: 2 weeks with pay for employees with 12 months' continuous service with the company, employees with 3 months' service receive 2 weeks with pay equal to 2 per cent of their earnings in the previous calendar year for each week of the vacation period, those with less than 3 months' service shall not be eligible for vacation pay.

Hourly wage rates: starting rate for both males and females shall be 40 cents increased to 50 cents for males after one year, and for female help increased to job rate after one year as follows:—group 1 (including cementing, pulling, ironing, singeing) 48 cents, group 2 (including doubling, folding, lining, punching, sorting, dressing, shaping, packing) 54 cents, group 3 (including eyeletting, repairing) 60 cents, group 4 (including binding, cording, perforating) 66 cents, group 5 (vamping and top stitch) 72 cents; for males—"A" jobs \$1, "B" jobs 80 cents, operation of "covering" minimum of 70 cents. Above rates effective June 2, 1947.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Textiles and Clothing

HAMILTON, ONT.—NATIONAL HOSIERY MILLS, LIMITED AND TEXTILE WORKERS UNION OF AMERICA, LOCAL 860.

Agreement to be in effect from March 3, 1947, to March 3, 1948, and thereafter from year to year subject to notice. The company recognizes the union as the sole and exclusive collective bargaining agency for all eligible employees. There will be no discrimination or intimidation of employees by the company,

the union or its representatives. Check-off: the company agrees to deduct monthly from the pay of employees, who so authorize, union dues and to remit same to the union.

Hours of work: 48 per week except for engineers. Overtime: time and one-half for work in excess of regular hours. Seven specified statutory holidays will be granted without pay to all employees as well as 2 additional holidays if generally observed locally. A 10-minute rest period shall be granted morning and afternoon to all employees. Vacation: one week with pay to all employees with 3 months' continuous service with the company, those with 5 or more years' continuous service receive 2 weeks with pay.

Wage rates: those in effect at the date of the agreement shall remain in effect during the term of the agreement unless the official cost of living index as of March 1, 1947, varies 6 or more points as published by the Dominion Bureau of Statistics, then either party to the agreement may open wage negotiations once upon 15 days' notice to the other party.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Non-Metallic Minerals and Chemicals

TORONTO, ONT.—UNITED-REXALL DRUG COMPANY LIMITED AND INTERNATIONAL CHEMICAL WORKERS UNION, LOCAL 279.

Agreement to be in effect from December 10, 1946, to December 10, 1947, and thereafter from year to year subject to notice. The company recognizes the union as the sole collective bargaining agency for all eligible employees. There will be no discrimination, coercion or intimidation of employees by the company or the union because of membership or non-membership in the union. Check-off: an employee may upon voluntary authorization have the union dues deducted monthly from his pay by the company and remitted to the union.

Hours of work: 8 per day Monday through Friday, except for members of maintenance department whose daily hours may vary, a 40-hour week for all however. Overtime: time and one-half for work in excess of the regular hours and for work on Saturdays, Sundays and 8 specified holidays, all of which are paid holidays provided employee is not absent from work on the work day immediately preceding or the day immediately following the holiday. Vacation: one week with pay to employees with one year's seniority, 2 weeks with pay to those with 5 or more years' seniority and 3 weeks with pay to those with 25 years' seniority. A 10-minute rest period will be granted morning and afternoon to all employees.

Wage rates: those presently in effect to continue during the term of the agreement unless there is a variation of 6 points in the official cost of living index as of the date of the agreement, and as published by the Dominion Bureau of Statistics, when either party to the agreement may open wage negotiations upon 15 days' notice to the other party at any time after 6 months from the date of the agreement.

Provision is made for seniority rights and grievance procedure.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, p. 86. Proceedings under this act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the extension of 4 new agreements, the amendment of 12 other agreements and the correction of 3 agreements. These include the amendment of the agreement for barbers and hairdressers at Chicoutimi and the correction of the agreement for longshoremen (ocean navigation) in Montreal Harbour in the July 26 issue of the *Quebec Official Gazette*, the correction of the agreement for retail stores at Granby and the amendment of the agreement for building trades at Hull in the August 2 issue, the amendment of the agreements for the embroidery industry at Montreal and the corrugated paper box industry for the province and the extension of a new agreement for barbers and hairdressers at Valleyfield in the issue of August 16. All the others are summarized below.

Requests for the amendment of the agreements for the building materials industry for the province and for building trades at Montreal were gazetted July 26. A request for the amendment of the agreement for building trades at Chicoutimi was published August 2. A request for the amendment of the agreement covering building trades at Three Rivers was published August 9. A request for a new agreement for sheet metal

manufacturing at Montreal was gazetted August 16.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing: Textiles and Clothing

MEN'S AND BOYS' CLOTHING INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated August 12, and gazetted August 16, amends the previous Orders in Council for this industry (L.G., August, 1944, p. 1005, Sept., p. 1141, Nov., p. 1363; Oct., 1945, p. 1520; Aug., 1946, p. 1093; Aug., 1947, p. 000, and previous issues). Present agreement to remain in effect until July 1, 1948, and thereafter from year to year, subject to notice. Except for clothing given out to contractors who regularly carry on business as such, no clothing, in whole or in part, covered by this agreement, shall be given to or taken out by any person or employee to be manufactured or worked upon anywhere outside the premise of the employer, without first obtaining a permit from the Parity Committee; except in the case of buttonhole makers by machine, no employer may employ a worker to work in his establishment on a section or part of a garment on a contracting or subcontracting basis.

Wage increases: all employees are to receive an increase of $7\frac{1}{2}$ cents per hour for each hour worked with the following exceptions—employees in the odd pants industry to receive increase of $7\frac{1}{2}$ cents commencing July 1, 1947; employees manufacturing sportswear and children's clothing to be paid an increase of 5 cents per hour. These increases do not apply in the case of overtime rates. Infants' clothing, formerly included in the section dealing with sportswear, children's and girls' clothing, is now omitted. Employees in the following categories may receive less than the hourly minimum wages: apprentices, gradual promotion and special permits. The number of apprentices is limited to $7\frac{1}{2}$ per cent of the total number of employees in the factory in zone I, 20 per cent in zone II and 25 per cent in zone III. In zone I, in the case of a scarcity of skilled workers in the manufacturing of sportswear and children's clothing only, the Parity Committee may grant a special permit for an additional 5 per cent of the employees being apprentices; in zones II and III when there is a scarcity of skilled workers, a special permit may be obtained from the Parity Committee for an additional 10 per cent of the employees being apprentices. Apprentices shall be examined every 3 months by the Parity Committee, who determine the wage rates for such employees. Employees transferred from one category to another calling for a higher wage rate will not immediately receive the full minimum for such category but will undergo a training period; after this period of 3 months and every 3 months thereafter, they will be examined by the Parity Committee who will determine their wage rates until the full minimum is attained.

MILLINERY INDUSTRY, PROVINCE OF QUEBEC.

An Order in Council, dated July 17, and gazetted July 26, amends the previous Orders in Council for this industry (L.G., March, 1947, p. 369). Territorial jurisdiction now includes the entire province of Quebec and is divided as follows: zone I, the Island of Montreal and within 50 miles from its limits: zone II, the remainder of the province. Minimum wage rates: zone I—hand blocker \$45.60 per week, blocker \$42.10, fabric operator, straw operator, cutter \$41.10, draper \$28.60, trimmer draper \$25.13, trimmer \$22.65; zone II—10 per cent less than minimum rates for zone I. Vacation: one week with pay, after at least one year in the industry and at least 6 months' service with the same employer previous to June 30 in any year.

Manufacturing: Pulp, Paper and Paper Products**UNCORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC.**

An Order in Council, dated July 24, gazetted July 26, and corrected August 9, amends the previous Orders in Council for this industry (L.G., Aug., 1945, p. 1197, Oct., p. 1520; March, 1946, p. 317, Aug., p. 1093, Sept., p. 1249, Oct., p. 1445; Jan., 1947, p. 49, March, p. 369). This agreement was also amended in the issues of April 19, 1947, and June 21, 1947, of the *Quebec Official Gazette*.

Hours: zone I, 47½ per week; zone II, 50 hours per week, 60 for stationary enginemen and firemen. Overtime is payable at time and one-half.

Minimum hourly wage rates in zone I: Females—foreladies 42 cents; handwork, first class, S and S machine operators, top-piece machine operators, covering machine operators, staying machine operators, tiers, stitchers, four-corner machine feeders, Brightwood machine feeders 36 cents; hand-fed table gummers 32 cents; non-classified help 29 cents; apprentices 20 and 10 per cent less than minimum rate. The average minimum wage for females, including apprentices, shall not be less than 36 cents per hour. Males—foremen 74 cents; scorers, machinists 66 cents; cutters on knife 59 cents; end-piece operators, truck drivers 54 cents; Brightwood machine operators, four-corner stayer operators, automatic glueing machine operators 60 cents; Brightwood machine feeders, four-corner stayer feeders 41 cents; slitter operators, circular saw operators 49 cents; bale-press operators, maintenance and repair men, assistant die makers 51 cents; punch operators 46 cents; shippers, colt press operators 58 cents; die makers 74 cents; cylinder box press operators 61 cents; cylinder box press feeders, colt press feeders 47 cents; strippers 36 cents; stationary enginemen: chief enginemen \$42.95 and \$36.95 per week, other enginemen from 52 cents to 68 cents per hour; boiler firemen 42 cents; non-classified help 36 cents; apprentices 20 and 10 per cent less than minimum rate. Average minimum rate for male employees shall not be less than 56 cents per hour. Effective July 26, 1947, actual wage rates paid to all male employees shall be increased by 3 cents per hour (across the board) and actual wage rates paid to all female employees shall be increased by 2 cents per hour (across the board). All employees hired by an employer after April 1, 1947, are not entitled to this overall increase.

Minimum hourly wage rates in zone II: Females—foreladies 45 cents; specialized hand workers 43 cents; ordinary hand workers, hand-fed table gummers, tiers 35 cents; top-piece machine operators, covering machine operators, staying machine operators, stitchers 37 cents; Stokes and Smith machine operators 39 cents; apprentices 28 cents and 31 cents; strippers 29 cents; folders 28 cents; other help 25 cents. Males—foremen 85 cents; assistant foremen, automatic glueing machine operators 70 cents; scorers 67 cents; end-piece operators 57 cents; slitter operators, assistant die-makers, circular saw operators 53 cents; bale press operators 51 cents; punch operators 46 cents; die makers 75 cents; cylinder box press operators 64 cents; cylinder box press feeders, colt press feeders 52 cents, colt press operators, truck drivers 60 cents; Brightwood press operators, four-corner machine operators, cutters on knife (first class) 63 cents; Brightwood press feeders, four-corner machine feeders 45 cents; cutters on knife (second class) 54 cents; shippers 62 cents; general helpers 55 cents; apprentices 30 and 15 per cent less than regular classification; stationary-enginemen 60 to 73 cents; firemen 48 cents; other help 33 cents.

Wages, labour and apprenticeship conditions of employees of the printing trades working in establishments governed by this agreement are governed by the agreement relating to printing trades in Montreal (L.G., Sept., 1946, p. 1250, Dec., p. 1772; March, 1947, p. 369, April, p. 543) and the agreement relating to printing trades in Quebec (L.G., May, 1946, p. 628, and previous issues), with the exception of the duration of working hours which shall consist of 47½ hours in zone I and 48 in zone II.

Manufacturing: Metal Products**RAILWAY CAR AND BUS MANUFACTURING, MONTREAL.**

An Order in Council, dated July 24, and gazetted August 2, makes obligatory the terms of a new agreement between Canadian Car and Foundry Company Limited and the Association of Employees of Turcot and Dominion Works and applies exclusively to these two plants. Agreement to be in effect from August 2, 1947, to March 31, 1948, or 1949, if no notice is given.

Hours: 9 per day, Monday through Friday, a 45-hour week, excepting maintenance employees who work a 49-hour week, sprinkler and heating system attendants a 56-hour week and police and guards a 60-hour week. Overtime is payable at time and one-half, double time after 12 hours on any one shift, except in specified cases. Work on Sundays and 8 specified holidays is payable at double time; for continuous shift work, time and one-half if required to work on regular day off. Employees working on piecework on Sundays and legal holidays shall be paid double their piece-work earnings. Vacations will be granted in accordance with established Company policy.

Wages: there is a general increase of 5 cents per hour in all the trades, over the rates given in the *LABOUR GAZETTE* (July, 1945, p. 995, Sept., p. 1341; Dec., 1946, p. 1772; Feb., 1947, p. 185) except for the following, some of which are new classifications: Turcot Works, cabinet shop—improver 90 cents per hour, helper 75 cents; inspection department—inspector 80 cents to \$1.18, shop clerk 80 cents to 90 cents; foundry—material grader

(cupola) 90 cents to \$1, helper (special) 90 cents; labour department—labourer (under 18 years of age) 75 cents, sweeper 69 cents; Murphy end department—motor winder \$1.13; paint department—tracing and cutting stencils \$1.03; passenger car assembly—body trimming 82 to 98 cents, furring, insulation 80 and 90 cents; special—welfare officer 80 cents to \$1.13. Dominion Works, labour department—sweeper 70 cents; inspection—inspector 80 cents to \$1.18, shop clerk 80 to 90 cents; machine shop—machine specialist 95 cents; truck shop—truck assembler 85 cents; special—welfare officer 80 cents to \$1.13. Workers on piece-work shall receive 5 cents per hour for each hour worked over and above their piece-work rate. Other changes in the wage scale include the omission of the power house and the shell departments and the transfer of the spring shop from the Turcot to the Dominion Works.

Construction

BUILDING TRADES, ST. HYACINTHE.

An Order in Council, dated August 7, and gazetted August 16, amends the previous Orders in Council for this industry (L.G., Jan., 1944, p. 70; Jan., 1945, p. 70; Aug., 1946, p. 1094, Oct., p. 1446, Nov., p. 1585; July, 1947, p. 1002, and previous issues) by providing that municipal corporations may benefit by a deduction of 10 cents per hour in the case of labourers whose working capacity is considerably reduced because of old age, infirmities or physical deficiencies, if such exception is approved by the Parity Committee.

BUILDING TRADES, MONTREAL.

An Order in Council, dated August 7, and gazetted August 16, extends the term of the previous Orders in Council for this industry (L.G., Sept., 1946, p. 1252, Oct., p. 1447, Dec., p. 1774; March, 1947, p. 371, May, p. 690, July, p. 1003) to December 1, 1947.

Transportation and Public Utilities: Water Transport

SHIPLINERS (OCEAN NAVIGATION), MONTREAL.

An Order in Council, dated July 17, and gazetted July 26, makes obligatory the terms of a new agreement between certain shipping and stevedoring companies and the International Longshoremen's Association, Local 1552. Agreement to be in effect from July 26, 1947, to December 31, 1947, and thereafter from year to year, subject to notice. Agreement covers all fitting of ocean vessels lying in the Harbour of Montreal for grain and cattle and all woodwork in connection with the stevedoring gear, except where permanent gear men are employed.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, Sept., 1946, p. 1253, Nov., 1940, p. 1203 and Dec., 1938, p. 1424, with the following exceptions:

Hours: starting time for day work shall be at 8 a.m. and 1 p.m.

Wages: \$1.13 per hour for day work and \$1.69½ for evening and night work. Work in holds of steamers, in which bulk sulphur or bulk fertilizer has been stowed and where old wood is being used, is payable at \$1.23 for day work and \$1.84½ for evening and night work. Employees cleaning holds in which special cargoes, specified in agreement, have

been stowed shall be paid at \$1.28 per hour for day work and \$1.92 for evening and night work. These rates also apply when employees are ordered to work in refrigerator compartments where the temperature is 32 degrees Fahrenheit or lower, or when employed in "bleeding" of bags. When men resume work at midnight, they shall be paid full rate until regular knocking off time, except when ship is finishing, in which case they shall be paid until their hatch is completed, but not less than 2 hours. If men have to be dismissed owing to weather conditions, they shall be paid until time dismissed, but not less than 2 hours. Double time shall be paid for work on Sundays, St. John the Baptist Day, Dominion Day and All Saints Day.

CHECKERS AND COOPERS (OCEAN NAVIGATION), MONTREAL.

An Order in Council, dated July 17, and gazetted July 26, makes obligatory the terms of a new agreement between certain steamship companies and Local 1657, International Longshoremen's Association. Agreement to be in effect from July 26, 1947, to December 31, 1947, and thereafter from year to year, subject to notice. Agreement governs all checkers and coopers working on ocean-going vessels in the Harbour of Montreal.

This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, Sept., 1946, p. 1254 and July, 1943, p. 989, except for the following changes:

Hourly wage rates: \$1.05 per hour for day work and \$1.57½ for night work. All work performed between the hours at 5 p.m. and 8 a.m. shall be considered as night work. Checkers, when employed temporarily as head checkers on stowage or as warehousemen shall receive an additional 10 cents per hour. All work performed on Sundays, St. John the Baptist Day, Dominion Day, Labour Day and All Saints Day shall be paid double time.

Trade

RETAIL STORES, CHICOUTIMI.

An Order in Council, dated July 24, and gazetted August 2, amends the previous Order in Council for this industry (L.G., Sept., 1946, p. 1254).

Hours: 50 per week for female employees and 53 for male employees. The number of specified holidays is increased by the addition of Easter Monday. Minimum weekly wage rates: for men and women from \$8.50 during first 6 months to \$16.50 during fourth year; from fifth to eighth year for men \$21, for women \$19; eighth year and after \$26 for men, \$21 for women; departmental managers, assistant managers, chief clerks—male \$36, female \$23; managers \$45; superintendents \$50; delivery men (truck or horse-drawn vehicle) \$30, helpers \$20; deliverers (under 21) from \$15 to \$25; deliverer's helpers \$2 per week less than deliverers; delivery boys with bicycle (furnished by employer) \$7.50; supernumerary employees—male 45 cents per hour, female 35 cents.

HARDWARE AND PAINT TRADE, QUEBEC.

An Order in Council, dated August 12, and gazetted August 16, amends the previous Orders in Council for this industry (L.G., June, 1944, p. 754; Oct., 1945, p. 1520; July, 1946, p. 931; Jan., 1947, p. 50, and previous issues).

Good Friday afternoon is now included in the list of paid holidays, but in establishments engaged exclusively in the retail trade, the employer may have his employees work from 1 p.m. to 6 p.m. on this day. Overtime: employees shall not be required to work more than 2 hours' overtime per week without pay. Minimum weekly wage rates: chief accountant \$36, head sales clerk \$37, receiving and shipping head clerk \$31.50, orders head clerk \$34, delivery man \$29, helpers \$18 and \$21, messenger \$8, bookkeepers from \$13.50 to \$34 during ninth year, clerk (selling and taking orders) from \$10.50 to \$34 during ninth year, clerk (receiving, shipping, unpacking, labelling and storing of goods) from \$13.50 to \$28.50 in ninth year, clerk (orders) from \$13.50 to \$31 in ninth year, extra clerk 66 cents per hour, supernumerary clerk 44 cents per hour, female employees 28 cents per hour, skilled tradesmen performing general work \$30.50 per week, unqualified workers \$28.50, general employees (repairing, assembling and installing merchandise) \$26 and \$29 for senior employees, \$10.50 and \$14 for junior employees, night watchmen \$25, trade apprentices from 22 cents per hour during first year to 39 cents during fourth year. An employee classified as clerk and doing delivery work for not more than half the regular weekly working hours shall be paid \$26 per week when his years of experience as clerk do not entail the payment of a higher wage rate, in which case he shall be paid such higher rate based on his years of service.

TRADE AND OFFICE EMPLOYEES, ARVIDA, JONQUIERE, AND ST. JOSEPH D'ALMA.

An Order in Council, dated July 17, and gazetted July 26, amends the previous Orders in Council for this industry (L.G., April, 1945, p. 518, Aug., p. 1199; July, 1946, p. 931, Nov., p. 1586).

Hours: restaurants and cafés now have a 50-hour week for female employees and 56 hours for male employees. Wages in retail commercial establishments: superintendent \$57.50 per week; manager \$52.90; assistant manager \$34.50 (male), \$25.45 (female); accountants, bookkeepers, collectors \$28.75 (male), \$20 (female); assistant accountants, assistant bookkeepers, stenographers, typists from \$9.80 during first year to \$18.40 during third year for males and \$17.80 for females; cashiers \$18.40 (male), \$17.80 (females); clerks from \$9.80 during first 6 months to \$29.90 after 8 years for males and to \$19 for females; delivery men from \$11.40 to \$29.90; bicycle delivery \$9.80; commission agents from \$12.65 (males) and \$12 (females) to \$24.15. Wages in commercial establishments (other than retail): superintendent \$57.40; manager \$51.75; assistant manager \$41.40; accountant, bookkeeper \$29.90; assistant accountant, cashier \$23; clerks (male) from \$12.65 to \$23; (female) from \$12.20 to \$17.80; delivery men (vehicle or truck) \$28.75, helper \$11.50; travelling salesmen, commission agents and collectors \$28.75 (male), \$19 (female). Wages in financial institutions, industrial establishments, municipal or school corporations: manager, chief accountant, etc. \$52.90 per week, assistants \$44.25; accountant, cashier \$41.40; bookkeeper, collector meter-reader \$35.65; clerks, stenographers, typists \$29.90; secretary-treasurer of rural municipalities \$24.15; junior clerks, stenographers, typists from \$12.10 to \$29.90 after 5 years for males and from \$12.10 to \$20.30 after 3 years for females; office employees in professional men's offices from \$9.80 to \$18.40 after 3 years for males, \$13.20 for females.

Fair Wage Conditions in Dominion Government Contracts

THE Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from the Depart-

ment of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During July

During the month of July the Department of Labour prepared, on request, 103 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

Particulars of the contracts which have been entered into during this period by the various Government departments appear hereunder:—

(1) Works of Construction, Remodelling, Repair or Demolition

Note: The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that "where by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour," and also specify that the rates of wages set out therein are "*minimum rates only*" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

CANADIAN COMMERCIAL CORPORATION

Construction of a new runway and development of aerodrome, Rivers, Man. Name of contractors, The Tomlinson Construction

Company, Limited, Toronto, Ont. Amount of contract, \$1,120,868.20. A fair wages schedule, dated June 3, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Blacksmiths	\$.85
Blacksmiths' helpers70
Brick and hollow tile layers	1.30
Brick and hollow tile layers' helpers75
(mixing and tempering mortar)	
Carpenters and joiners	1.10
Cement finishers80
Cement and concrete mixer operators:	
Steam75
Gas, or elec.65
Compressor operators (gas, or elec.)65
Drivers65
Driver, team and wagon	1.05
Drill runners65
Electricians (inside wiremen)	1.10
Engineers, operating, steam:	
Single or double drums	1.00
Three or more drums	1.05
Enginemen, stationary75
Hoist operators—tower (gas, or elec.)65
Labourers65
Motor truck drivers70
Motor truck driver and truck	1.70
Ornamental iron workers	1.15
Painters and glaziers	1.05
Plumbers and steamfitters	1.25
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)75
Rodmen (reinforced steel)75
Roofers:	
Felt and gravel: patent: composition75
Sheet metal90
Sheet metal workers90
Steam shovel engineers	1.05
Steam shovel firemen75
Steam shovel oilers70
Shovel operators (gas.)	1.05
Structural steel workers	1.15
Watchmen60
Welders and burners (acetylene or elec.)95

Repairs to existing buildings at No. 2 Manning Depot, R.C.A.F. Station, Trenton, Ont. Name of contractor, W. C. Brennan Contracting Company, Limited, Hamilton, Ont. Amount of contract, \$25,500. A fair wages schedule, dated July 4, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Brick and hollow tile layers	\$ 1.15
Brick and hollow tile layers' helpers (mixing and tempering mortar)60
Carpenters and joiners80
Cement finishers70
Cement and concrete mixer operators:	
Steam80
Gas. or elec.70
Drivers55
Driver, team and wagon90
Electricians (inside wiremen)80
Engineers, operating, steam95
Enginemn, stationary65
Labourers55
Motor truck drivers60
Motor truck driver and truck	1.60
Ornamental iron workers90
Painters (spray)75
Painters and glaziers70
Plumbers and steamfitters80
Rodmen (reinforced steel)65
Roofers:	
Felt and gravel: patent: composition60
Sheet metal70
Sheet metal workers70
Shinglers (wood, asbestos)80
Watchmen50
Welders and burners (acetylene or elec.)	1.00

Construction of a monitor control station, Sawmill Bay, N.W.T. Name of contractors, Northern Power Construction Limited, Edmonton, Alberta. Amount of contract, \$100,000. A fair wages schedule, dated July 8, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Axemen	\$ 1.25
Blacksmiths	1.50
Carpenters and joiners	1.50
Electricians (inside wiremen)	1.50
Labourers	1.00
Plumbers and steamfitters	1.50
Steam shovel engineers	1.50
Tractor operators (Letourneau, etc.)	1.25
Welders and burners (acetylene or elec.)	1.50
Diesel mechanics	1.50
Linemen (power)	1.50

NATIONAL HARBOURS BOARD

Concrete paving at the north end of Lapointe Pier, Vancouver Harbour, B.C. Name of contractors, Dominion Construction Company Limited, Vancouver, B.C. Amount of contract, \$4,314. A fair wages schedule, dated May 5, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Carpenters and joiners	\$ 1.25
Cement finishers	1.20

Cement and concrete mixer operators:	
Steam	1.25
Gas. or elec.86
Labourers80
Motor truck drivers85
Motor truck driver and truck	1.85
Road grader operators (gas.)	1.06
Road roller operators (steam or gas.)85
Tractor operators:	
Letourneau, etc.	1.25
Small86
Watchmen60

Reconstruction of cribwork—Pier No. 9, Halifax Harbour, N.S. Name of contractors, Standard Construction Company Limited, Halifax, N.S. Amount of contract, \$21,234. A fair wages schedule, dated May 7, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Blacksmiths	\$.85
Blacksmiths' helpers65
Carpenters and joiners	1.05
Compressor operators (gas. or elec.)70

Labourers60
Motor boat operators65
Motor truck drivers65
Motor truck driver and truck	1.65
Steam shovel engineers	1.25
Steam shovel firemen80
Steam shovel oilers70
Shovel operators (gas.)	1.25
Timbermen and cribmen (measuring, scribing and, by the use of the axe, adze, etc., cutting and fitting timber)70
Watchmen55
*Per day.	

Reconditioning concrete piles at Pier 2, Halifax Harbour, N.S. Name of contractors, Gunite and Waterproofing Limited, Montreal, P.Q. Amount of contract, \$15,900. A fair wages schedule, dated May 9, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Air chipper operator	\$.70
Blacksmiths85
Blacksmiths' helpers65
Carpenters and joiners	1.05
Cement finishers80
Cement gun operators80
Cement gun nozzlemen	1.10
Compressor operators (gas. or elec.)70
Drill runners70
Enginemn, stationary70
Labourers60
Pipefitters (surface—temp. work)75
Plumbers and steamfitters	1.13
Riggers (general)75

	Per Hour
Timbermen and cribmen (measuring, scribing and, by the use of the axe, adze, etc., cutting and fitting timber)70
Watchmen55

Repairs to Marine Leg, Berth 25, Halifax Harbour, N.S. Name of contractors, Maritime Steel and Foundries Limited, New Glasgow, N.S. Amount of contract, \$3,950. A fair wages schedule, dated June 13, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Carpenters and joiners	\$ 1.11
Compressor operators (gas. or elec.)70
Engineers, crane (steam, gas. elec.)90
Engineers on steel erection	1.10
Hoist operators—tower (gas. or elec.)70
Labourers60
Motor truck drivers65
Motor truck driver and truck	1.65
Structural steel workers	1.10
Watchmen55
Welders and burners:	
Acetylene or elec.90
On steel erection	1.10

Resurfacing and drainage of roadway, Fishermen's Wharf, Vancouver Harbour, B.C. Name of contractors, Construction and Supply Company, Deep Cove, B.C. Amount of contract, \$2,840.50. A fair wages schedule, dated June 18, 1947, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Asphalt rakers	\$.86
Asphalt tampers, smoothers and spreaders86
Carpenters and joiners	1.25
Labourers80
Motor truck drivers90
Motor truck driver and truck	1.90
Road roller operators (steam or gas.)90
Watchmen60

DEPARTMENT OF PUBLIC WORKS

Reconstruction of wharf, Montague, P.E.I. Name of contractors, Messrs. Wallace Noye, Allison Raynor, William Baglole and James Noye, Ellerslie, P.E.I. Amount of contract, \$37,410. A fair wages schedule, dated November 4, 1946, in the terms following, was furnished for inclusion in the contract:—

	Per Hour
Carpenters and joiners	\$.70
Compressor operators (gas. or elec.)60
Drivers50

Unemployment Insurance

Unemployment Insurance Statistics, July, 1947

Analysis of Claims for Benefit—Adjudication of Claims—Status of Fund

DURING July, 20,034 claims for Unemployment Insurance Benefit were filed in local offices throughout Canada, as against 21,365 filed during June and 27,576 in July, 1946, according to the monthly report issued by the Dominion Bureau of Statistics.

Ordinary claims on the live unemployment register at July 31 numbered 41,877 (26,943 male and 14,934 female). This compares with 47,817 (31,109 male and 16,708 female) ordinary claims at June 30 and 68,535 (48,864 male and 19,671 female) at July 31, 1946. These totals indicate some reduction in the number of cases of recorded unemployment among insured persons at the end of July as against June and a considerable decrease at July 31 this year compared with the same date last year. In addition, there were 1,328 (1,037 male and 291 female) other claims on the register as at July 31 compared with 2,616 (2,230 male and 386 female) at June 30. These are largely short-time claims.

Claims on the live register at July 31 are classified in Table 6 by the number of days continuously on the register since the last initial or renewal claim was filed. This indicates the duration of current cases of recorded unemployment among insured persons.

In July, 26,861 claims were adjudicated by Insurance officers, 18,046 being considered entitled to benefit and 8,815 not entitled to benefit. The chief reasons for non-entitlement were: "refused an offer of work and neglected an opportunity to work" 2,260 cases, "insufficient contributions while in insurable

employment" 2,239 cases, "voluntarily left employment without just cause" 2,219 cases.

A total of 51,270 persons received one or more benefit payments amounting to \$1,956,722 for 1,018,204 compensated days of unemployment in July compared with 62,221 persons paid \$2,153,537 for 1,122,849 compensated unemployed days in June and 83,838 persons who received \$3,304,896 for 1,670,652 compensated days during July, 1946.

The average duration of the unemployment compensated was, then, 19.9 days in July, 18.0 days in June and 19.9 days last July. The average amount of benefit paid per beneficiary was \$38.17 in July, \$34.61 in June and \$39.42 in July, 1946. The average amount of benefit paid per compensated day of unemployment was \$1.92 in July, \$1.92 in June and \$1.98 in July of last year.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending July 31, 1947, showed 2,862,663 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1947, an increase of 126,486 since June 30, 1947.

As at July 31, 1947, 181,071 employers were registered as having insurable employees representing an increase of 2,499 since June 30, 1947.

The column for "Bulk" includes Miscellaneous \$1,756.89 and Contributions for Armed Service \$13,097,686.57.

The column "Interest on Investments and Profit on Sale of Securities" represents:

- (a) The exact amount of interest earned for each completed fiscal year and the approximate amount for each month in the current year;
(b) Profit on sale of securities taken into account at the end of each year only.

* April receipts for Stamps and Meter and the proportionate Government Contributions for these items were included with figures for March 1947.

Digest of Selected Decisions of the Umpire under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945, number of the *LABOUR GAZETTE* and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

The selected decisions are published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU-B. 108

(24 July, 1946)

Held that it is customary in many industries in all parts of the country to have more than one shift working at a plant and the objection to working on a night shift in such industries cannot be accepted as a valid reason for refusal to accept employment. The material facts of the case are as follows:—

The claimant, a single man, aged 18 years, was last employed by an oilcloth and linoleum company as a general helper at 50 cents an hour for 39 months and became separated from his employment on the 27th of September, 1945, on account of work shortage.

On October 29, 1945, the claimant was notified of a permanent position as a general helper within 10 minutes' walking distance of his home, at a starting wage of 35 cents an hour, the work to be on an eight-hour shift. The claimant refused this employment on the grounds that it was shift work and was too dirty.

He filed claim for benefit on November 12, 1945, which was disallowed and the Insurance Officer disqualified him for a period of six weeks for refusing to apply for employment which was considered suitable.

From this decision the claimant appealed to the Court of Referees on the grounds that the premises of the prospective employer were very unsanitary, also that they were working

on night shifts which would interfere with his attendance at night school.

The Court of Referees by a unanimous decision allowed the claim, stating that the claimant had a valid reason to refuse the employment in that it would have prevented him from going to night school.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the grounds that the claimant did not prove just cause in refusing employment because of night shifts, which would have prevented him from attending night school or, in the alternative, that he should not be considered available for work.

DECISION

The Umpire's decision was that the claim should be disallowed and the claimant disqualified for a period of six weeks and gave as his reasons:—

In considering the case it is necessary to do so in the light of actual facts and circumstances. The claimant had been out of work for some considerable time after having been engaged for over three years in a war industry.

He was asked to accept employment at the prevailing rate of pay in the district. Although the wages were lower than those which he had formerly received they were, nevertheless, the prevailing rate for the type of work which he was asked to perform. Also it was the usual commencing rate of pay in this factory.

This employment was refused by the claimant on the grounds, first, that it was dirty; second, that it was on a night shift; and third, that it would interfere with his attendance at night school.

The claimant was not present when his case was considered by the Court of Referees. There was no evidence submitted by the claimant to indicate that the work offered was of such nature that he could not reasonably perform.

With regard to the second point at issue, that of working on a night shift, it is customary in many industries in all parts of the country to have more than one shift working at a plant and this can not be accepted as a valid reason for refusal to accept such employment.

The third point at issue is the claim that the acceptance of employment on a night shift would have interfered with the education of the claimant. Again there was no proof

submitted to indicate that such was actually the case. From the information obtained it is indicated that the claimant was attending school on two nights a week, the school hours being from 7.00 to 9.30 o'clock p.m.

I am of the opinion that the hours of employment of which the claimant was notified would not in any way have interfered with his attendance at school on two nights a week.

CASE No. CU-B. 106

(6 July, 1946)

Held that if insured persons live in an inaccessible area, and refuse employment because of this fact, they are to all intents and purposes placing themselves outside the labour market and, therefore, are not available for employment.

The material facts of the case are as follows:

The claimant, a married woman, aged 33 years, was employed at a woollen plant as a weaver, at 45 cents per hour, from March 15, to December 29, 1945, when she voluntarily left, giving the reason that she had been deprived of her usual means of transportation to and from her employment (two miles from her home) and was unable to find another person who could furnish it. The claimant filed a claim for benefit on January 7, 1946, which was disallowed by the Insurance Officer and the claimant was disqualified for a period of six weeks on the grounds that she voluntarily left her employment without just cause.

From this decision the claimant appealed to the Court of Referees which, by a unanimous decision, reversed the decision of the Insurance Officer.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the grounds that just cause had not been established by the claimant for voluntarily leaving her employment or, in the alternative, that she was not available for work.

DECISION

The Umpire's decision was that the claim should be disallowed and gave as his reasons:

The facts in this case are not in dispute. The claimant voluntarily left her employment because she claims she had no means of transportation to her work. Generally speaking, a distance of two miles cannot be said to be an unreasonable distance for persons to go to their places of employment.

It is not an uncommon thing for people to go to work who live at a much greater distance from their employment than is the case in this particular instance.

If insured persons live in an inaccessible area, and refuse employment because of this fact, they are to all intents and purposes placing themselves outside the labour market and, therefore, are not available for employment.

In this particular instance the distance from the place of employment cannot be said to be great and, if the claimant refused to accept employment then she put herself in a position where she is not available to accept employment at the nearest place where such employment is available.

Two similar cases came before me recently, CU-B. 79 and CU-B. 93, involving the same principle, and in each case I arrived at the same conclusion.

Unemployment Benefits Denied Strikers in Michigan

The legislature of the State of Michigan has enacted legislation debarring payment of unemployment compensation to employees involved in a strike. Also, a judicial ruling has set aside the policy of the Michigan Unemployment Compensation Commission which permitted payment of benefits to workers not directly interested in a strike. This latter policy has been consistently opposed by State business organizations on the basis that it afforded to unions, through

their ability to close a plant by striking in one key department, the opportunity of securing financial assistance for members by unemployment insurance payments during strikes.

The court decision came as a result of a management appeal from a Compensation Commission ruling that 58 workers in the Gear and Axle Division of General Motors Corporation were idle through no fault of their own during a UAW strike and consequently were entitled to benefits.

Labour Law

Labour Legislation Enacted by the Parliament of Canada and the Nova Scotia Legislature in 1947

Dominion

THE Parliament of Canada, which was in session from January 30 to July 19, 1947, provided for a Canadian Maritime Commission and a Dominion Coal Board, and continued in force certain Regulations for the post-war emergency period. The Canadian National-Canadian Pacific Act was amended to declare the working conditions to be those established by collective agreements if these are filed with the Minister of Transport. The Government Employees Compensation Act was consolidated with certain wartime Orders, and amendments made in laws relating to old age pensions, housing and immigration.

Both Houses of Parliament approved the Instrument adopted at Montreal on October 9, 1946, for the amendment of the Constitution of the International Labour Organization.

Canadian Maritime Commission

The Commission is to recommend policies which will come into force on Proclamation, provides for a Commission of three members under the Minister of Transport.

The Commission is to recommend policies for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry; to exercise such powers of the Minister under the Canada Shipping Act as he may require of it; to administer, under regulations of the Governor in Council, any steamship subventions voted by Parliament; and to perform any duties required of it under any other Act or Order of the Governor in Council.

The Commission may inquire into various matters, including the cost of construction, repair and reconditioning of vessels in Canada and other countries and the cost of marine insurance, wages and subsistence of officers and crews and other operating expenses of vessels of Canadian registry and compare them with the costs of operating similar vessels under other registry. It may appoint advisory committees to confer with it on matters under its jurisdiction.

Dominion Coal Board

The Dominion Coal Board Act, when proclaimed, will give effect to certain recommendations of the Royal Commission on Coal (L.G., March, 1947, p. 302). The Board is to consist of not more than seven members under the Minister of Reconstruction and Supply, and is to take over the duties of the Dominion Fuel Board which was established in 1922.

The Board is to make recommendations to the Minister concerning the production, importation, distribution and use of coal in Canada, and to investigate systems and methods of mining, problems of marketing and distribution, development of new uses for Canadian coal, costs of production and distribution, and accounting methods of dealers, the position of coal in relation to other available forms of energy, the problem of co-ordinating all Government activities relating to coal, and any other matters which the Board or the Minister considers necessary. Under the Governor in Council, the Board is to administer any Parliamentary subsidies relating to coal.

The Act makes provision, too, for measures to be taken in case of an actual or threatened fuel shortage in Canada which concerns Canada as a whole. The Governor in Council may make the regulations he considers necessary to conserve the supply and to control production, distribution and use, and a penalty may be imposed for their violation not exceeding \$5,000 or five years' imprisonment or both. "Fuel" includes coal, light and heavy fuel oil, kerosene, range, gas and diesel oils, and other hydro-carbon fuel used for the same purposes as the above grades.

Canadian National and Canadian Pacific Railways—Working Conditions

A section added to the Canadian National-Canadian Pacific Act, 1933, provides that rates of pay, hours of work and other conditions of employment of persons engaged in construction, operation or maintenance of these two railways shall be such as are set

out in agreements between such railways or their representatives and the representatives of interested employees, whether the agreements were entered into before or after the passing of the amending Act. Such agreements must, however, have been filed in the office of the Minister of Transport.

In introducing the Bill, the Minister of Transport stated that

the purpose of the Bill is to give the Federal Government jurisdiction over rates of pay, hours of work, and working conditions of the employees of the Canadian National and Canadian Pacific Railways. Parliament has exclusive jurisdiction over these railways and the object of the Bill is to occupy the field in so far as labour relations of their employees are concerned. The Government considers it is now time for Parliament to exercise its jurisdiction by legislating in the field of labour relations as affecting the construction, operation or maintenance of these railways.

Hudson Bay Mining and Smelting Co.— Wages and Working Conditions

An Act respecting the Hudson Bay Mining and Smelting Co., Ltd., declares the undertakings of the Company in Flin Flon on both sides of the Manitoba-Saskatchewan boundary to be works for the advantage of two or more provinces thus bringing the Company's works within the field of Dominion legislation under the British North America Act. As in the case of the transcontinental railways above, the agreements relating to wages, hours, and conditions are to govern. The agreements, however, are to be filed with the Minister of Labour. A clause stipulates that the above provisions are not to be construed as relating to workmen's compensation. The Minister of Labour in introducing the Bill stated that:—

"The mining shaft and railway operated by the company run across the interprovincial boundary. The mill, zinc plant and smelter buildings are also situated on both sides of the boundary. While the great majority of the employees are resident in Manitoba and are hired and paid in Manitoba, about one-half of them are working in Saskatchewan, and the other half in Manitoba; and in the course of their work they move back and forth daily across the interprovincial boundary.

"Throughout the war years, the company's operations were subject in matters of labour relations to P.C. 1003 and to the wage control order. The return of jurisdiction over labour relations and wages and working conditions to the provinces has raised a problem of unique difficulty both to the provinces and to the company with respect to the application of provincial legislation governing labour relations and terms and conditions of employ-

ment—notably holidays with pay and hours of work legislation—to the company's operations. This is particularly so as the legislation of the two provinces on these matters is not uniform. In matters of collective bargaining, neither the company nor the union are in a position to bargain with certainty on matters relating to terms and conditions of employment in view of the doubt and difficulties as to application of provincial legislation.

"The company has discussed the question with the governments of both Manitoba and Saskatchewan and with the Department of Labour in Ottawa, and also made a submission within the last week to the Industrial Relations Committee of this House.

"Manitoba and Saskatchewan, who are the only provinces interested in this matter, have requested that, with a view to meeting the admitted difficulties of the situation, the Dominion should be asked to enact legislation to bring these mining operations of the company within the scope of Dominion jurisdiction."

Government Employees' Compensation

The Government Employees Compensation Act, 1947, which came into force April 1, 1947, repeals the Act passed in 1918 and its amendments, and consolidates its provisions, with some changes, with the provisions made by Order in Council under the War Measures Act.

The Act applies to persons in the service of, and paid a direct wage by or on behalf of, the Crown, including persons employed by a company, corporation, board or agency established to perform a duty or function on behalf of the Government of Canada who are declared by Order in Council to be subject to the Act. Members of the Navy, the Active Force of the Army, the Regular Air Force and the R.C.M.P. are excluded.

The Minister may require companies, commissions, boards or agencies whose employees are subject to the Act to pay the costs of compensation for their employees for the current year, to pay such proportion of the expenses of administration as the Minister may fix, and to maintain a reserve fund in respect of future claims.

Compensation is provided for employees disabled and for dependents of employees dying as a result of personal injury by accident arising out of and in the course of employment or from an industrial disease due to the nature of the employment. Compensation is to be at the rate provided for persons employed by private employers under the law of the Province where the accident occurred or the disease was contracted.

Dominion Government employees in Prince Edward Island which has no Workmen's Compensation Act are to be compensated under the terms of the New Brunswick Act, by such authority as the Governor in Council may appoint. For a similar reason Dominion Government employees in the Northwest Territories are to be compensated under the Yukon Workmen's Compensation Ordinance. In the case of Prince Edward Island an appeal may be taken from the decision of any authority determining the amount of compensation to a judge of the Supreme Court of Judicature of Prince Edward Island, whose decision is to be final, but no appeal lies from a decision of a judge in the first instance.

Where an employee, ordinarily resident in a Province other than the Yukon Territory, suffers an accident or disease while employed in the Yukon or Northwest Territories, it is to be deemed to have occurred or been contracted in the Province of which he is a resident. Similarly, where an employee, other than one employed locally outside of Canada, is killed or disabled by accident or disease due to his employment outside of Canada compensation is payable under the terms of the law of the province, or of the Northwest Territories, in which he was ordinarily resident before entering such employment.

Included in the Act is the provision made by Order in Council during the war for compensation to an employee or his dependants for injury or death caused by pulmonary tuberculosis contracted as a result of employment in a hospital or sanatorium operated by the Government of Canada for the treatment of tuberculosis, or while employed as a nurse in the field and exposed to this disease, when such disease is not compensated under the law of the Province in which the disease was contracted.

Merchant Seamen's Compensation

An amendment in the Merchant Seamen Compensation Act, 1946, revokes the Merchant Seamen Compensation Regulations approved by Order in Council P.C. 4755, July 17, 1945, under the War Measures Act, but protects the rights to compensation of seamen which were acquired under the Regulations before the Act came into force and continues under the Act all proceedings begun under the Regulations.

Immigration

An amendment in the Immigration Act incorporates the provisions of an Order in Council (P.C. 858) of February 9, 1945, which

authorized the admittance to Canada of the dependants of members of the Canadian Armed Forces who have served overseas.

The Chinese Immigration Act passed in 1923 was repealed. This Act prohibited the landing in Canada of persons of Chinese origin or descent, with the exception of diplomatic, consular or other Government representatives with their suites and servants, children, born in Canada who had left for educational or other purposes, merchants, and students.

Old Age Pensions

A number of changes, effective on Proclamation and retrospective to May 1, 1947, were made in the Old Age Pensions Act. The provision fixing the maximum pension which a Province is permitted to pay is repealed, leaving the provinces free to fix the maximum amount. The income which a pensioner is permitted to have, inclusive of his pension, is increased, in the case of a single person, from \$425 to \$600 a year, and, in the case of a married person, from \$850 to \$1,080 a year. For blind pensioners, the maximum income including pension is now \$720, instead of \$500, for a single person, \$1,200, instead of \$925, for a blind pensioner married to a sighted spouse, and \$1,320 for two blind persons married and living together. The maximum Dominion contribution to the cost of pensions is fixed at 75 per cent of \$30 a month.

The nationality qualification has been repealed, and the residence qualification modified to enable a person to claim pension even if he has not resided in Canada for the twenty years preceding his claim, provided that he has, before the 20 years, resided in Canada twice as long, in the aggregate, as he has been absent during the 20 years.

Other provisions deal with procedure as between the Dominion and the Provinces in connection with several matters.

Emergency Powers

The Continuation of Transitional Measures Act, 1947, came into force immediately after the expiry of the National Emergency Transitional Powers Act, 1945, on May 15, 1947, and is to remain in force until December 31, 1947, if Parliament meets during November or December, but, if not, the Act is to expire on the sixtieth day after the meeting of Parliament in 1948 or on March 31, 1948, whichever date is earlier. The operation of the Act may be extended for not more than a year on address of the Senate and the House of Commons and an Order

of the Governor in Council. Any Orders in Council continued by the Act may be revoked in whole or in part.

The Act continues certain specified Orders in Council which include the Wartime Labour Relations Regulations (P.C. 1003) of February 17, 1944, and its amendments, and Orders in Council authorizing a supplementary payment to old age pensioners; compensation to seamen for war damage to effects, and out-of-work allowances for merchant seamen.

United Nations

The Privileges and Immunities Act enables the Governor in Council to authorize the accession of Canada to the Convention on Privileges and Immunities of the United Nations and to grant to the United Nations and to any of its affiliated organizations of which Canada is a member the privileges and immunities necessary to the carrying on of their work.

Housing

An amendment in the National Housing Act, 1944, enables joint loans to be made under Part I of the Act, repayable over a period up to 30 years, amounting to 95 per cent of the first \$3,000 of lending value of the house, 85 per cent of the next \$3,000, and 70 per cent of the balance. A further change enables two-family houses to be financed under Part I, which authorizes the Minister of Finance to join with approved lending institutions to make loans towards the con-

struction of houses for prospective homeowners, or for rent, and towards co-operative projects. Life insurance, trust and loan companies are authorized to acquire land, improve and sell it for residential purposes on terms set out in the Act and Central Mortgage and Housing Corporation may guarantee to such companies the return of the principal so invested with interest not exceeding 2 per cent per annum.

Bills not Passed

A Bill to provide for the Investigation, Conciliation and Settlement of Industrial Disputes was not proceeded with but was allowed to stand over until another session in order to give an opportunity for further study. The text of the Bill was printed and proceedings before Parliament fully dealt with in the July and August issues of the LABOUR GAZETTE (pp. 930, 1102).

A private member's Bill, arising out of the Winnipeg Strike of 1919, would have amended the Railway Act, to make it clear that the pension rights of railway employees who would otherwise be entitled to benefit should not be lost because of a break in service by reason of leave of absence, suspension, dismissal followed by reinstatement, a temporary lay-off on account of reduction of staff, or absence due to an industrial dispute, strike or lockout. The standing Committee on Industrial Relations which considered the Bill found that the purpose of the Bill commended itself to them but recommended that further study be made of its implications.

Nova Scotia

The Nova Scotia Legislature which met on March 25 and adjourned on May 12 to meet later in the year, passed two laws dealing with collective bargaining and conciliation in industrial disputes, one applying generally and the other to deep-sea fishermen. A new Vocational Education Act was enacted, the Factories Act was revised, and amendments were made in the laws relating to coal mines. The Company Doctors Act, first enacted in 1900, was repealed.

Trade Union Act

The Trade Union Act, which came into force on Proclamation July 1, 1947, repeals the Industrial Disputes Investigation Act (Nova Scotia), the Trade Union Act, 1937, the Conciliation Service Act, 1941, and the Wartime Labour Relations (Nova Scotia) Act, 1944. The latter merely declared the Dominion Wartime Labour Relations Regu-

lations, 1944 (P.C. 1003), to apply to industries within provincial jurisdiction.

The new Act, to be administered by a Labour Relations Board, applies to all matters within the jurisdiction of the Province except the Crown in right of the Province. It incorporates provisions of the 1937 Act and of the Dominion Wartime Regulations.

The 1947 statute continues the stipulation that collective bargaining is mandatory for employers when they are requested to enter into negotiations by a majority of their workpeople or a majority of those in a unit appropriate for collective bargaining.

Like the Wartime Labour Relations Regulations, the Act provides machinery for determining questions concerning the right to collective bargaining and for the settlement of disputes over the terms of an agreement. It prohibits strikes and lockouts

during the life of an agreement, and in other disputes until 14 days have elapsed after the report of a conciliation board or until 15 days after the Minister of Labour has received an application for a board but has not notified the parties to appoint their representatives, or until 15 days after the Minister has announced that no board will be appointed.

Like the Trade Union Act, 1937, the new statute requires trade unions to furnish the Government with certain returns. Its provisions concerning collective agreements and those forbidding discrimination against trade unionists are very similar to those of the Wartime Regulations. Like the Regulations, the 1947 enactment prohibits changes in wages and other conditions without the workpeople's consent until 14 days have elapsed after the report of a conciliation board or until the Minister has decided not to appoint a board.

Provision is made in the Act for co-operating with the Dominion under certain conditions. Where the Nova Scotia Act and legislation enacted by the Parliament of Canada are substantially uniform, the Minister may, with the approval of the Governor in Council, enter into an agreement with the Dominion Minister of Labour for the employment by the Nova Scotia Government, of Dominion Government employees, and vice versa.

In the following summary, provisions identical with those of the Dominion Regulations or of the Trade Union Act, 1937, are merely indicated.

CHANGES MADE BY THE LEGISLATURE

Several changes in the Bill were made by the Legislature. One provision added during passage, to the section setting out "unfair labour practices" on the part of employers, specifically permits an employer to explain his side of a dispute to his employees either directly or by mail or by means of a bulletin board. Another amendment requires the Board to consider community of interest among the employees when determining the union appropriate for bargaining. It was also added that persons bound by an agreement must do what they are required to do, and must refrain from doing what they are required to refrain from, by the terms of the agreement.

A provision which was struck out in the Legislature would have permitted a clause to be inserted in an agreement to require, as a condition of employment, membership in a specified trade union or to grant preference in employment to members of such union.

The Act, as passed, declares invalid any clause in an agreement which requires an employer to dismiss an employee because of activities on behalf of a union other than the specified union.

Again, under the Bill as introduced, a strike could be called if a majority of the employees who vote voted in favour of it, but the words "who vote" were deleted. As passed, the Act forbids attempts, at any time, to solicit employees, on the employer's premises and without his consent, to join the union. In the original Bill, this prohibition was confined to working hours.

Further, employers are forbidden to discriminate against employees on account of union activities but, except where it is otherwise expressly provided, nothing in the Act is to affect the right of an employer to suspend, transfer, lay off, change the status of or discharge an employee for proper and sufficient cause. The words "change the status of" were added during passage of the Bill through the House. The stipulation in the Bill that no person shall cease to be an employee by reason only of his ceasing to work as a result of a lockout or strike or by reason only of dismissal contrary to the Act was amended to restrict it to a lockout or strike "which is not contrary to this Act."

NEW PROVISIONS

A new provision in the Act has to do with its enforcement. It is expressly stipulated that an employers' organization or a trade union may be prosecuted in its own name for an offence under the Act, and any act or failure to act on the part of an officer or agent, within the scope of his authority as officer or agent, is to be deemed an act or failure of the organization or union.

Another clause makes it an offence for a trade union which is not entitled to bargain under the Act on behalf of a unit of employees to call or authorize a strike of those employees.

CHECK-OFF

Very similar to the provision made by the Trade Union Act, 1937, is that made in 1947 for the deduction of trade union fees from wages. The Coal Mines Regulation Act, 1927, permits the check-off from wages, at the workman's written request, of doctors' fees and payments or contributions for benefit society, hospital, union or church. The Trade Union Act, 1937, stipulated that in any industry, in which by statute or arrangement between employer and employees, deductions from wages were made by the

employer for benefit societies, hospital charges or the like, deductions for union fees must be made on the written request of individual union members, if a ballot of the employees, taken in accordance with the Act, favoured such deduction.

The new provision is not restricted to industries where there is a check-off for other purposes, but it makes the same stipulation for a ballot of the employees at the Minister's direction when union officers have applied for a vote, and requires the employer to institute a check-off of union fees when a majority of the employer's workpeople vote in favour of it. The Act prescribes the form of assignment to be used by the employees.

Collective Bargaining by Fishermen

The Fishermen's Federation Act is a revision of a 1927 statute of the same title with new provisions to give collective bargaining rights to deep-sea fishermen who are compensated by a share of the earnings of the vessel.

In a judgment handed down on January 14, 1947, the Supreme Court of Nova Scotia held that the crews of certain deep-sea fishing vessels were not "employees" within the meaning of the Wartime Labour Relations Regulations (L.G., 1947, p. 381).

To assist in administering the Act under the direction of the Governor in Council, Inspectors are to be appointed by the Government. These officials are to certify County Stations as bargaining agents and, in other ways, to administer the collective bargaining provisions.

The Act enables any 40 or more deep-sea fishermen in any county to be registered by the Minister of Labour of Nova Scotia as a County Station of the Federation for the purpose of collective bargaining with the owners of vessels engaged in deep-sea fishing from any port in the country. Every fisherman is to have the right to belong to a station in the County in which he resides.

County Stations, which may establish local stations in the county to secure information and aid in purchasing of supplies of various kinds and in connection with the preserving, canning and selling of fish, are empowered, subject to Government approval, to make by-laws for the conduct of their business and of their meetings, for fixing their fees, and for other matters, including the election or appointment of representatives for collective bargaining purposes.

Like trade unions, County Stations must furnish the Minister of Labour with information as to their membership, the names of their officers, fees, the number of meetings

and their receipts and expenditures. A County Station may apply to the Inspector for certification as the bargaining agent of such fishermen, and if the Inspector is satisfied that the majority of fishermen in good standing in the county are members of the station, he may certify it. No station may be certified if the Inspector considers it to be influenced by an owner so that its fitness to represent fishermen is impaired. Negotiations must be begun within 20 days after either party has given notice to the other. The provisions of a collective agreement are to be included in the ships' articles and any condition contrary to the agreement is of no effect. An agreement made before or after the coming into force of the Act, if for a term of less than a year, is to run for one year and, if for an indeterminate term, is to run for at least a year. Notice for bargaining for renewal of an agreement may be given at any time within two months of the expiry of the agreement. Each agreement must provide for final settlement of differences between the parties and lacking such provision, an agreement may be amended to that effect by the Inspector.

Other provisions of the Act authorize appointment by the Minister of Labour of a conciliation officer in any dispute on the request of either party, forbid an owner or agent of a vessel to interfere in the affairs of a County Station or to discriminate against or to intimidate any person for membership in such a Station or for exercising his rights under the Act, and forbid any person acting on behalf of a station to attempt at an owner's place of business or on a vessel, except with the owner's consent, to persuade a fisherman to become or to refrain from becoming a member of a County Station.

Factories

The Factories Act was revised with some changes relating to the employment of young persons and to ensure health and safety.

The minimum age for employment remains at 14 years but the provision is repealed which permitted boys and girls under this age to be employed during the four months from July to October in gathering and preparation of fruits and vegetables for canning or drying. A new provision directs the employer, before employing a boy or girl under 16, to obtain an employment certificate as required by the Education Act.

The earlier Act did not limit normal working hours but maximum hours are now fixed for persons under 16 at eight in a day and 48 in a week. Daily hours may be

differently apportioned to secure a shorter working day on Saturday. To meet cases of emergency, the Inspector is authorized, subject to the regulations, to permit hours for young persons under 16 up to 12½ per day and 72 per week on not more than 36 days in the year. This provision formerly applied to women and girls.

New regulations require girls and women to wear a suitable hat or head-gear during working hours, require the person in charge of such employees to see that they are fully notified of this rule, and forbid a woman or a person under 16 being allowed to work on any machine without first receiving adequate instruction in its operation and dangers or without adequate supervision by a person with thorough knowledge and experience of the machine. It is expressly stipulated that wash-rooms with hot and cold water must be provided for men and women and an adequate supply of pure drinking water furnished.

New and more detailed safety rules are laid down respecting elevators and hoists, and the Governor in Council is authorized to make further regulations relating to them.

Coal Mines

Amendments in the Coal Mines Regulation Act were effective July 1, 1947. The minimum age for employment of boys underground is raised from 16 to 17 years, but the minimum for workers at the coal face remains at 18. Qualifications of candidates for certificates as mine officials, surveyors, electricians and stationary engineers have been revised. The time during which a miner may be employed at the face without a coal miner's certificate is reduced from 18 months to 12. A similar cut is made in the length of experience which a candidate for a coal miner's certificate must have, but, as previously, six months' experience at the coal face is required.

Company Doctors

The Company Doctors Act, passed in 1900, was repealed. This Act provided that where an employer in a mine or manufacturing establishment made a deduction from the wages of his employees for medical attendance any employee might specify in writing the physician in respect of whose services such deduction was to be made. Where 25 per cent or more of the employees agreed in specifying a particular physician, the latter was to be recognized as the regular medical attendant of the Company. It was pointed out in the Legislature that the check-off for

medical attendance would still be available but that all doctors would be on the same footing.

Workmen's Compensation

A number of changes were made in the Workmen's Compensation Act. A new section authorizes the Board to pay compensation to a workman who has suffered a permanent injury which the Board considers capable of impairing his earning capacity even though such earning capacity has not been diminished.

The 1945 amending Act fixed minimum weekly compensation in the case of accidents happening after March 29, 1945, when the amendment came into force, at \$12.50 per week or average earnings for total disability cases and a proportionate amount in partial cases. A further amendment now extends this minimum to permanent total disability cases arising before that date.

As regards silicosis, it is made clear that compensation for this disease is limited to persons exposed to silica dust in an industry under Part I of the Act. A new provision enables the Board to pay compensation for silicosis, regardless of when such disability may have arisen, if it considers the disability to have been caused by exposure to silica dust in the Province in an industry under Part I and if there has been no such exposure elsewhere. No such compensation is to be paid for any period before June 1, 1947, nor in respect of the death of a workman occurring before that date.

Certain amendments relate to medical aid. The time-limit for rendering accounts to the Board for medical aid is extended from three months to six. Where the Board has approved an employer's scheme for medical aid, it is not liable under the Act for such aid except where the physician attending under the scheme considers that the injury requires immediate treatment by a dentist, or an eye, ear, nose or throat specialist. This provision is now extended to make an exception also in cases where skilled nursing services are required and are authorized by the Board.

The following are added to the schedule of industrial diseases for which compensation is payable:—Epitheliomatous, cancer or ulceration of the skin due to handling or use of tar, pitch, bitumen, mineral oil or paraffin or any component product or residue of these substances.

Engine Operators

The Engine Operators Act, 1945, enables the Minister, on recommendation of the Board of Examiners, to issue a certificate to any British subject who, at the coming into force of the Act (March 29, 1945), had had sufficient experience and service as an engine operator. The date has now been changed to March 21, 1947.

Wages of Railway Employees

An amendment was made in the Nova Scotia Railway Act, which applies to railways constructed under authority of an Act of the Legislature. The amendment, effective June 1, 1947, requires wages to be paid at such intervals as the Company may determine but not exceeding two weeks. The Act formerly required payment to be made twice a month at intervals as nearly as possible of half a month.

Unemployed—Preference to Residents

The Nova Scotia Labour Act, first passed in 1933 and renewed annually, is maintained in force for another year. It forbids employers of 25 or more workmen to hire workers who have not been resident in the Province for at least a year unless the person so hired has a certificate from the Employment Office that there are no unemployed in the municipality capable of and willing to do the work.

Vocational Education

The Vocational Education Act is a revision with some changes of the Technical Education Act which was repealed by the Nova Scotia Technical College Act, 1947. The new Act defines "vocational education" as any form of instruction, below university level, to fit persons for gainful employment, or to increase their skill and efficiency, including employment in agriculture, forestry, mining, fishing, construction, manufacturing, commerce or any primary or secondary industry.

The Act, as formerly, provides for a Director to supervise and promote vocational education, for the establishment of vocational schools, and for establishing and continuing schools for miners.

New provisions authorize the establishment and maintenance of technical institutes to give scientific, technological or commercial training above vocational high school level but below that of a university, schools for apprentices under the Apprenticeship Act, 1937, and schools for training teachers in vocational education, and the setting up of correspondence study services.

Old Age Pensions

Under an amendment in the Nova Scotia Old Age Pensions Act the supplemental allowance together with the pensioner's income and pension may not exceed \$425 a year instead of \$365, as formerly.

Recent Regulations Under Provincial Legislation

APPRENTICESHIP regulations have been made in both Alberta and Saskatchewan. In Alberta, rules were made governing the apprenticeship of radio technicians and of persons learning the printing trade in connection with weekly newspapers and job printing; in Saskatchewan welders were brought within the Apprenticeship Act and regulations prescribe the nature of the training to be given and fix the wage-rates. The rules in Saskatchewan governing apprentices in the motor-vehicle-repair trade were amended to adjust the rates and to bring the hours into conformity with the new Hours of Work Act.

Procedure to determine holiday pay and to facilitate the carrying out of the Act is laid down under the Manitoba Vacations with Pay Act, 1947. In Alberta, new regulations of the same sort replace the earlier ones, and make special provision for holiday credits for construction workers likely to be employed by more than one employer during the year.

In British Columbia, a minimum hourly rate of 90 cents has been fixed for carpenters, with an overtime rate of time and one-half after eight hours in a day and 44 in a week. There are new regulations, too, setting out the qualifications and the procedure for the examining of stationary engineers.

Persons employed in the fire-departments of cities over 10,000, nurses, including nurses in training, orderlies and others employed in a professional or technical capacity in hospitals, railroad employees whose hours are governed by collective agreement, and pharmaceutical apprentices are brought again within the Saskatchewan One Day's Rest in Seven Act. These classes were excluded in 1944. In the same province, new regulations under the Trade Union Act, 1944, replace those made in 1945.

The training and registration of nursing aides are governed by new regulations in Alberta.

Alberta Apprenticeship Act, 1944

Regulations respecting the trade of a radio technician and that of persons in the branch of the printing trade engaged in publishing weekly newspapers and job printing were approved by Orders in Council (547-47 and 546-47) on June 3 and gazetted June 13.

In both cases the Regulations provide for an apprenticeship of four years, including three months' probation. Persons who have attended a vocational school approved by the Board and who produce a satisfactory certificate that they have specialized in a course applicable to the trade, or who have had previous experience in the trade, may have the term of apprenticeship reduced by such amount as the Board permits. In each trade the employer who employs one journeyman, or who is himself a journeyman, may employ one apprentice; for every three additional journeymen, one apprentice may be employed.

Apprentices are required to attend the classes at the technical school in the courses which are recommended by the Trade Advisory Committee concerned and approved by the Board. Hours of work and of school attendance of apprentices are to be the same as for journeymen or for the school, as the case may be. Wage-rates of apprentices are to be not less than a fixed proportion of the prevailing rates of a journeyman, beginning, for the first six months, at 40 per cent in the case of a radio technician, and at 35 per cent in the weekly newspaper trade. The rate increases by 5 points, or towards the end, 10 points, until, for the last six months of the fourth year, it is to be 80 per cent of the journeyman's rate in both trades.

Alberta Labour Act

HOURS OF WORK AND MINIMUM WAGES

By Order in Council 545-47, approved on June 3 and gazetted June 13, truck drivers and their helpers or swampers are exempted from the hours limits of the Act and from the provision of Male Minimum Wage Order 1 (1947) requiring the payment of overtime rates. These workers may be employed on a straight-time basis up to 10 hours in a day and 50 hours in a week but their hours must be confined within the twelve immediately following the start of work, and after 10 hours they must be allowed at least eight consecutive hours of rest. An employee is deemed to be on duty from the time he is required to report until he is relieved from work and all responsibility for work.

The above Order, however, was amended on July 10 by O.C. 682-47, gazetted July 15, to declare that truck drivers and their helpers employed in any city are exempt from the above Order.

HOURS OF WORK AND MINIMUM WAGES IN HIGHWAY CONSTRUCTION

Order 7 (1947) of June 18, also approved July 10 and gazetted July 15, exempts men employed in highway construction from the normal hours-limits of 8 and 48 imposed by the Alberta Labour Act and from the provision of Male Minimum Wage Order 1, 1947, (L.G. June, 1947, p. 843) requiring the payment of time and one-half for overtime after 9 hours in a day or 48 in a week. These workmen, from April 1 to November 30 in each year, may work on a straight-time basis up to 10 hours in a day and 208 hours in a month.

HOLIDAYS WITH PAY

The Regulations concerning holidays with pay, which were made on June 24, 1946 (Order 3), have been repealed by the Holidays with Pay Order No. 5 (1947), which was made on June 14, 1947, approved by Order in Council on July 10 (O.C. 682-47), and gazetted July 15, on which date they came into effect.

The new Holidays Order reproduces most of the earlier Order, but makes some provisions more precise and adds specific provisions concerning holiday pay.

For the purpose of determining a workman's right to an annual holiday with pay in any year after the first year to which he was entitled to a holiday, the days comprising the annual holiday in the first year are to be deemed to be days of actual work.

Pay for the annual holiday must be given at least one day before the holiday begins, and the workman must be given at least 15 days' notice of the date when his holiday is to begin. Where an employee has not received an annual holiday and the employment terminates, the employer is to pay to the workman, in addition to all other amounts due him, an amount equal to 2 per cent of his regular pay for the period of his employment, if he has worked for less than a year, or, if it is the second year of his employment, an amount equal to 4 per cent of his regular pay for the period of his employment in that year. For each day of the holiday, the amount to be paid by the employer is one-twenty-sixth of the monthly wage, where the employee is paid by the month; where wages are paid by the hour, day or week, the actual rate for such period immediately preceding the holiday is to be the basis; where wages are by the piece or commission, the pay is to be calculated on the basis of the average pay for the six months preceding the holiday. If deductions are made by the employer for board or lodging, the regular pay for the holiday must include the cash value of such deductions.

HOLIDAYS IN THE CONSTRUCTION INDUSTRY

Special regulations concerning holidays for construction workers were also approved on July 10, gazetted July 15 and in effect on that date. This Order (No. 6, 1947) is designed to take care of persons employed by more than one employer during a "working year", which is defined as the period from July 1 to June 30. Office-workers are not within the scope of Order 6.

The Order stipulates that a workman whose employment with one employer is not continuous throughout the year is entitled to a Holiday with Pay Credit of 2 per cent of his earnings from each employer, and one who continues in the employ of the same employer for two or more years is entitled to a credit of 4 per cent of his earnings in the year. The Credit is to be indicated by the employer affixing credit stamps at the end of each working day, working week or other regular pay period, in the workman's Holiday-with-Pay Stamp Book. The stamps are to be issued by the Board of Industrial Relations and purchased by the employer from any branch of the Alberta Provincial Treasury Branches in amounts equivalent to 2 per cent or 4 per cent, as the case may be, of the earnings of the employee during such working period.

Within the first 10 months after June 30 in each year, the workman is to present his Stamp Book to one of the Alberta Provincial Treasury Branches and is to receive money equivalent to the face value of the stamps, and on receiving this sum, the workman is to be deemed to have begun his annual holiday. During his holiday period, a workman is not entitled to Holiday-with-Pay Credit from any employer in the construction industry.

Alberta Nursing Aides Act, 1947

Regulations concerning nursing aides were approved by the Lieutenant-Governor in Council on May 13 and gazetted May 31.

It is stipulated that applicants for training under the Act must be between 18 and 40 years of age; they must have Grade 9 standing or its equivalent, and submit satisfactory health certificates. The approved institution where practical training is given must furnish board, room and laundry, and, these, for the purposes of the allowance payable in accordance with the agreement with the Dominion Government under the Vocational Training Act, are to be valued at \$30 a month.

To be eligible for a certificate as a nursing aide, a student must have taken the 12-weeks course at the training school, have had for three periods of eight weeks each practical

experience at three approved institutions, and have put in a final four weeks at the school for review and examination.

Anyone who has been practising as a nursing aide or "practical nurse" may apply to be placed on the Nursing Aides' Register and this may be done after consideration of the applicant's academic standing and work experience.

British Columbia Boiler Inspection Act

Regulations governing the examination of stationary engineers were approved by Order in Council No. 1208 on June 14 and gazetted on July 17 when they went into force.

Candidates must be Canadian citizens with a satisfactory knowledge of the English language, spoken and written, and testimonials must be submitted as to their character and experience. Examinations are required for certificates as First, Second, Third and Fourth Class Engineer and for Temporary Certificates. Special Certificates may be granted, after examination, for Low-pressure and High-pressure heating plants and for a Logging-donkey.

British Columbia Male and Female Minimum Wage Acts

The special overtime rate of time and one-half prescribed by Order 25 (1947) under these Acts for persons employed in the manufacturing industry is declared by Order 25A (1947) not to apply from August 1, 1947 to April 30, 1948 to that section of the pulp and paper industry which has been permitted under the Hours of Work Act, to work more than eight hours in a day and 44 in a week. Order 25A (1947) was made on July 30, 1947, and gazetted on July 31.

CARPENTERS

A minimum rate of .90 cents an hour for carpenters was fixed by the Board of Industrial Relations on July 29, gazetted July 31, to take effect on August 4. Time and one-half the regular rate must be paid for work permitted by the Board after eight or 44 hours. This Order 58 (1947), replacing earlier Orders, does not apply to permanent maintenance men or to persons covered by any other Order.

Wages must be paid in full at least semi-monthly, up to not more than eight days before payment, as required by the Semi-Monthly Payment of Wages Act of 1939.

LOGGING AND SAW MILLING

Order 28A of July 15, gazetted July 31, rescinds an Order (28) of September 25, 1935,

fixing the maximum price chargeable for board and lodging in the logging and sawmilling industry in certain parts of the Province.

British Columbia Shops Regulations and Weekly Half-Holiday Act

A weekly holiday on Monday for persons employed in shops in the area of unorganized territory known as the Town of Hedley in the Yale Land District is prescribed by regulations which were approved by Order in Council of July 11 and gazetted July 17. In addition, shops in the area are to be closed from 6 p.m. to 8 a.m. from Tuesday to Friday and from 6 p.m. on Saturday to 8 a.m. on the following Tuesday.

Manitoba Vacations with Pay Act, 1947

Manitoba Regulation 35/47, filed July 28, sets out the records employers are required to keep for the purposes of the Act, the procedure concerning disputes over holiday pay, and the conditions to be observed when a plant is closed for a holiday.

Employers must keep records showing, with respect to each person employed, the beginning of the term of employment; the rate of wages on May 1, 1947, or when first employed if hired after May 1; the date and particulars of any subsequent changes in rates; the number of hours in the regular work-day and work-week; a record of each holiday granted since the enactment of the statute, showing the date when it began and ended, the period of employment covered by it and the amount of holiday pay given; a record of the workman's absences from the job which the employer intends to count in determining the right to a holiday under the Act, indicating whether the absence is authorized or unauthorized, or whether it is covered by a medical certificate, in which case the certificate is to be filed. These records are to be maintained intact by the employer, and kept available for inspection for three months following the termination of employment. Where the employer furnishes meals or lodging, or both, particulars are to be entered in the record, and where an agreement has been made concerning the amount to be allowed for meals or lodging, a memorandum of the agreement is to be entered and signed by both employer and workman.

Where there is a dispute concerning the amount of holiday pay to which a workman is entitled, it is to be settled by the Manitoba Labour Board, but an application to the Board for this purpose may not be entertained unless filed within 30 days from the date of

the termination of employment. However, in special cases the Board may extend this limit, subject to the provision requiring records to be maintained for inspection for three months.

Special provision is made for cases in which the employer shuts down the whole or part of a plant for the purpose of giving a holiday to his employees. Any employer proposing to do this must post notices in conspicuous places in the plant, and must file two copies of the notice with the Board. If the proposed shutdown is in accordance with a collective agreement, the employer must file with the Board a copy of such provisions. Unless the employees' bargaining representatives sign the copies of the notice filed with the Board, the employer must furnish them with a copy of it and if no objection is filed with the Board within three days by the representatives they are to be considered as concurring in the proposal.

Where the proposed shutdown is not in pursuance with a collective agreement, the employer is required to file with the Board, and post with the notices, a list of any employees to whom he does not propose to give full pay for the period. The employer must include, too, in the notices, the general terms of any proposal for giving to any of the employees, so listed, a holiday with partial pay, and of any proposal for permitting employees to earn wages during the period of the shutdown. As promptly as possible after the filing and posting of the notices, and not less than seven days before the date of the shutdown, the employer must, in prescribed form, give a notice to each employee, filing one copy with the Board, of the partial or *pro rata* pay to be given and of what opportunities there will be to earn wages. Within three days after receiving such notice, an employee may notify the employer that he objects to the amount of pay or that the proposal is inadequate or unreasonable under the circumstances. If the dispute is not settled by the parties, the matter may be referred by the workman to the Board within seven days, and, if he files no such statement within ten days, he is to be considered as having accepted the proposal. The Board is to inquire into and determine any dispute not settled by the parties. The procedure for such an inquiry is set out in the Order.

Saskatchewan Apprenticeship Act, 1944

WELDERS

By proclamation on August 6, gazetted August 15, the trade of "custom welding" was brought within the scope of this Act.

Regulations governing apprenticeship in blacksmithing and custom welding were made (O.C. 1249/47) on August 6 and gazetted August 15. They became effective on July 15.

Apprentices, at least 16 years of age, must serve a minimum of 4,000 hours, including a probationary period, but the term may be reduced by any period spent at technical school or for any person who received training in the Armed Forces or under any rehabilitation plan.

Apprentices' rates start at not less than \$18.50 a week for the first year, and rise by \$1.50 in the third, fourth and fifth half-year, then by \$2, \$2.50, and \$2.50 for the last three six-month periods. The normal working hours are the eight and 44 of the Hours of Work Act and, in no case, more than 48 in a week.

At least one month, but not more than three months of each year of apprenticeship must be spent at technical school. During such period the apprentice is eligible for any living allowance paid by the Government.

By an Order in Council (1253/47) of August 6 amending from July 15 the general Apprenticeship Regulations of April 12, 1946, as amended on December 6, 1946, it is stipulated that on certain conditions a certificate of qualification may be issued to a blacksmith or custom welder, if satisfactory proof is given that he has served at his trade during the preceding nine years or, in Armed Forces, during the preceding 12 years. If he has served for over five years, but not more than five, he must undergo an examination or trade test. If he has served for over five years, a certificate may be issued without examination.

HOURS OF WORK

Four Orders in Council of August 6, gazetted August 15, amend the Regulations concerning certain trades to bring them into conformity with the Hours of Work Act, 1947. The normal work-week for which the wages of apprentices in these trades are fixed is the normal week set by the Act, 44 hours, but in no case, more than 48 hours. The trades concerned are the building trades, printing and electrical trades, and barbering and beauty culture.

MOTOR-VEHICLE REPAIR TRADE

The regulations governing apprenticeship in the motor-vehicle repair trade (O.C. 967/45) of June 29, 1945 (L.G. 1945, p. 1208) were amended (O.C. 1252/47) on August 6, gazetted August 15, to make the same stipulation as to hours as that shown above for the building and other trades, and to alter from July 15 the basis for calculating the wage-rates.

For the first six months, an apprentice in this work is to receive not less than 50c an hour, for the second six months, 70 per cent of the journeymen's rate, for the second year, 75 per cent of that rate, and for each of the next three years, the proportion is increased five points, so that in the fifth year, he is receiving not less than 95 per cent of the journeymen's rate. By the earlier Order, the rate, beginning at 42 per cent of the mechanic's rate increased by five points at the end of each of the first two three-month periods and thereafter every six months, until at the end of the fifth year, it stood at 93 per cent of the mechanic's rate.

Saskatchewan Hours of Work Act, 1947

Persons employed in constructing an airport outside a city but within five miles of the city limits are exempted from the Hours of Work Act by an amendment (O.C. 1155/47) of July 16 to Order 9 which made similar provision for certain other types of construction (L.G., August, 1947, p. 7). The Act requires payment of time and one-half the regular rate if hours in excess of eight and 44 are worked.

Saskatchewan One Day's Rest in Seven Act

Brought again within this Act from August 1, 1947, are fire-departments in cities of more than 10,000 people; nurses, including nurses in training, orderlies, and others employed in a technical or professional capacity in the care of the sick in hospitals; railroad workers whose hours of work are governed by agreement; and apprentices in pharmacy.

These classes were excluded on February 1, 1944, by an Order in Council (50/44) of January 20, 1944, as amended by Order in Council 370/44 of April 11, 1944. The 1944 Orders are revoked by an Order approved on August 6, 1947 (O.C. 1231/47) and gazetted on August 15.

Saskatchewan Public Health Act

The Regulations of November 16, 1943 (O.C. 1275/43) governing lumber, sawmill, mining and construction camps which require the employer to contract with a physician for the care of his workmen, and permit the deduction of 3 cents a day from wages up to a maximum of 75 cents a month, were amended on August 6, 1947 (O.C. 1222/47) and gazetted on August 15. The amendment brings the Regulations into line with the Saskatchewan Health Services Act, 1947, and Hospitalization Act, 1947. The employer is

not to be liable for the cost of such medical care or hospital treatment as his workmen may be entitled to under these Acts.

Saskatchewan Trade Union Act, 1944

New Regulations (O.C. 1233/47) of the Labour Relations Board under this Act on August 6, 1947, replace those approved by O.C. 164/45 on January 30, 1945, and amended

by O.C. 775/45 of May 25, 1945. The new Regulations were approved on August 6, 1947 and gazetted on August 15. They lay down the procedure and prescribe the forms to be used in the administration of the Act which requires collective bargaining by employers under certain conditions, declares certain practices unfair, and confers on the Labour Relations Board power to determine questions arising under the Act.

Legal Decisions Affecting Labour

British Columbia

Trade Union Within Scope of British Columbia Industrial Conciliation and Arbitration Act May Be Prosecuted under that Act—Strikers Fined

THAT a trade union which comes within the definition of "trade union" in the British Columbia Industrial Conciliation and Arbitration Act is a legal entity under that Act was the decision given on July 22, by Mr. Justice Macfarlane of the Supreme Court of British Columbia, confirmed on August 12, by the Court of Appeal. The judgment of the Appeal Court will be summarized in the next issue of the *LABOUR GAZETTE*.

In this connection it may be noted that during a strike in 1901 a civil action against a trade union, as such, and the damages awarded, brought about the enactment in 1902 of the Trade Union Act of British Columbia. The Le Roi Mining Company sued the Rossland Miners' Union in 1901 and \$12,500 damages were awarded. Again in 1926, a suit against a local of the International Alliance of Theatrical Stage Employees et al for damages for loss in business resulting from a strike and picketing was allowed and \$1,750 damages granted.

Several charges arose out of a strike begun on June 9 by some 30 persons employed by the Imperial Laundry Company at Nanaimo. The strike resulted from the dismissal by the company of two women who had been absent without leave. One, Eula Patterson, was attending the convention in Vancouver of the British Columbia Federation of Labour after being refused permission to do so, and the other was said to have remained at home to look after her sick mother.

On June 17, the acting Minister of Labour of British Columbia, whose permission is required, announced that prosecutions would be instituted under the Industrial Conciliation and Arbitration Act. Twenty-seven strikers were charged under Section 27 with

striking before the dispute had been referred to and reported on by a Conciliation Board; three union officers, including Mrs. Patterson, the president, were summoned under Section 35 for authorizing an unlawful strike, and the union itself was charged with the same offence. No charges were laid under Section 31A which prohibits the calling of a strike or going on strike until after a secret ballot has been taken, under Government supervision, by the employees concerned.

Of the 27 individuals, five girls were juveniles under 18 years of age and had to be sent to Juvenile Court.

Contending that the Act gave to a Conciliation Board full power to determine certain questions, Crown counsel posed four questions which Magistrate Beevor-Potts of Nanaimo agreed, overruling defence objections, should be submitted to the Minister of Labour since no board had been established. Proceedings were stayed until these questions could be settled. The four questions, together with three put by the defence, concerned the status of the accused individuals as employees, that of the union as a "trade union" within the meaning of the Act, whether it had negotiated on behalf of the employees, and so on. The Magistrate held the Minister's decisions on these points to be conclusive and not subject to attack.

The 22 strikers were convicted on August 1, and each fined \$1 and \$1 costs. The three union officers, charged with authorizing an illegal strike, were acquitted.

As regards the charge against the union itself, the Nanaimo Dry Cleaning and Laundry Workers' Union, Local 1, there were other developments. Counsel for the Union's president, Eula Patterson, moved for an order prohibiting the Magistrate from proceeding with the charges against it and its officers on the ground that the union had no legal existence. An order *nisi*, directed to Magistrate Beevor-Potts, was accordingly issued by

Mr. Justice Coady of the British Columbia Supreme Court of June 30. A motion to have the writ of prohibition made final came before Mr. Justice A. D. Macfarlane of the Supreme Court. In order that the substance of the application might be argued, Mr. Justice Macfarlane disallowed on July 16, certain preliminary objections. These he dealt with in his judgment of July 22, dismissing the motion.

Two grounds for granting the writ were stated in the notice of motion: (1) that the Magistrate had no jurisdiction to hear the complaint against the union by virtue of service of the complaint and summons upon Eula Patterson, as no British Columbia law provides for service on such an organization; and (2) that the Magistrate had no jurisdiction over the union since it is not a legal entity.

After commenting on the form in which the affidavits were served (they were not endorsed to show on whose behalf they were filed as required by the Crown Office Rules, and did not identify the service on Eula Patterson with service on the union), Mr. Justice Macfarlane pointed out that it was unfortunate, too, that the name of the union was used in instituting these proceedings. He referred to the judgment of the Saskatchewan Court of Appeal in proceedings by way of *certiorari* in connection with the Saskatchewan Trade Union Act, legislation analogous to the British Columbia Industrial Conciliation and Arbitration Act,

that an applicant cannot be heard to object on the ground of failure to serve it properly in its non-corporate capacity, when the application for the writ of *certiorari* was made and taken on its behalf. (*Mackay and Mackay v. Int. Assoc. Machinists, Lodge 1057, Saskatoon*) (L.G., 1946, p. 997).

The only question left for me on this application is whether there was no service or could be no service on the Trade Union of the information and complaint which was before him. Without at the moment deciding the question as to whether in the circumstances which I have mentioned the Union is entitled to object, and addressing myself to the grounds set out in the notice of motion, there are two points to be considered, points which must necessarily in a large measure be considered together.

The first of these is whether the objection that no law of the Province of British Columbia makes provision for service on an organization of the nature of the Trade Union is a good objection, and secondly, whether the Union can be served at all on the ground that it is not a legal entity . . .

The Statute defines a trade union as meaning an international, national or provincial organization of employees or local branch chartered by and in good standing with such an organization. An affidavit has been filed here that this Union is a branch chartered

by and in good standing with the Canadian Congress of Labour, and I am assuming, because it is not contested before me, that that organization is a trade union. The Statute provides for certification of a trade union as a bargaining authority for a unit of employees. It authorizes the bargaining authority when certified for a unit to require the employer to commence collective bargaining. It also provides protection for the trade union from interference; it imposes on it certain restrictions; it recognizes the insertion in a collective agreement as a condition of employment that employees shall have membership in a specific trade union; it requires that every employer shall honour a written assignment of wages and, unless such an assignment is revoked in writing, remit the sum named in the assignment at least once each month to the union. I need not set out all the provisions of that nature. I mention these only as illustrations of the fact that the Statute recognizes the union and protects its interests. These are elements which are characteristic of the establishment of what is often referred to in law as a juristic person. Counsel for the applicant submits that because a trade union is certified as a bargaining authority for a unit of employees and is not authorized in its own right to make agreements that the Statute does not make it an entity (or as I prefer, the expression juristic person), but that if it does so, it makes it such solely for the purpose of acting as agent for the union and that as it is not authorized to declare a strike, it does not become a person liable under the section of the Statute under which the information is laid.

I do not think that this distinction is important, at least so far as I am concerned. I may here also say that I do not think that the cases as to whether a trade union generally is a legal entity and suable or not suable as such in other proceedings, such as were considered in *Hollywood Theatres Ltd. v. Tenney* . . . [L.G., 1939, p. 233] and *Stephen et al v. Stewart et al* . . . [L.G., 1944, p. 237] are applicable to the consideration of the status of the union under this Statute as I have to decide it here. The question I have to decide is as to the effect of this particular Statute conferring these particular powers and imposing particular restrictions and liabilities on the trade union bringing itself under it, that is, whether in these circumstances, there is created here a juristic person recognized by law.

One thing further may be said and that is this—that Sections 34, 35, 36 and 37 all specifically subject the trade union certified under the Act to penalties for infractions of the Statute. I do not see, in view of the powers, privileges and the restrictions imposed by these penalty clauses how it can be contended that under the terms of this particular Statute the trade union certified under it is not recognized by law as a juristic person subject to the provisions of the Act.

Further with regard to the question of service, the Statute provides that every trade union . . . that authorizes or calls a strike contrary to the Act is . . . liable on summary conviction. The Summary Convictions Act provides for service upon 'a person' and defines "person" as including a corporation, partnership or party. The term party is not

defined in that Statute nor have I been referred to any other statute containing a definition of it. The wording, however, of Section 38 of the Industrial Conciliation and Arbitration Act, 1947, it seems to me, clears up this difficulty. That Section declares that if an employers' organization, employees' organization or trade union is guilty of an offence under this Act, any officer, agent or authorized representative of the employers' organization, corporation, employees' organization or trade union who assented to the commission of the offence is a party to and guilty of the offence.

We have thus a provision for service on a person which includes a party under the Summary Convictions Act which is made applicable by the Statute here and a declaration that the trade union who assents to the commission of an offence is a party to that offence... Counsel contends that as in all other statutes provision is made for service in a particular manner on juristic persons such as corporations, societies and others, and there being no such provision here, service cannot be made. In the argument before me the case of *The Queen v. The Toronto Railway Co.* (1889) 2 Can. C.C. page 471, was cited. In that case Mr. Justice Rose, whose judgment was approved on appeal, deals with the question of service... he cites the case of *Newby v. Colt's Patent Fire Arms Co.* (1872), L.R. 7 Q.B. 293, where Mr. Justice Blackburn stated the law to be as follows... "At common law the service of a writ on a corporation aggregate, which from the nature of the body could not be personal, was by serving it on a proper officer, so as to secure that it came to the knowledge of the corporation..." The same situation exists there as here, namely, that if service may be effected, I have not to determine whether the service has been proper...

Having before me the Statute which I have and the provisions of the Summary Convictions Act, I am not prepared to hold that service of the information and complaint cannot be made on the trade union. I am also of the opinion that this legislation by its very terms has made attributable to the trade union certified under it the characteristics of a juristic person, or in other words, has made it an entity under the terms of the Statute, and, while it is not necessary for me so to decide that where proceedings are brought by way of prohibition in the name of the trade union, and such trade union is a party to the proceedings (following *Mackay and Mackay v. Int. Assn. Machinists Lodge No. 1057, Saskatoon, supra*), I do not think it is open to the trade union here to object on the ground of failure to serve it properly in its non-corporate capacity.

The motion was therefore dismissed and the writ prohibiting proceedings against the union set aside. *Re Patterson and Nanaimo Dry Cleaning and Laundry Workers' Union, Local No. 1*, Supreme Court of British Columbia, July 22, 1947.

B.C. Company Fined for Illegal Lockout

On July 11 Famous Foods and Macaroni Co. was fined \$250 by Magistrate McInnes in

Vancouver Police Court. The company was convicted of unlawfully causing a lockout of employees, a charge laid under the British Columbia Industrial Conciliation and Arbitration Act.

Workman's Widow's Claim Against the Crown Upheld by Supreme Court

On January 4, 1947, the Supreme Court of Canada dismissed with costs an appeal by the Crown against a decision of the Exchequer Court in favour of the suppliants against the Crown. The Exchequer Court had awarded \$17,000 as damages suffered by the widow and infant son of a man who had been killed in a motor accident in the course of his employment on September 29, 1943. The accident was caused by the negligence of a member of the Military Forces acting within the scope of his duties.

The British Columbia Workmen's Compensation Board had awarded compensation, and payments were being made and accepted by the widow. But the latter, by petition of right, brought an action claiming damages against the Crown by virtue of the Families' Compensation Act and the Exchequer Court Act.

The Exchequer Court held that no provision of the Workmen's Compensation Act affected the liability of the Crown as created by the Exchequer Court Act. Sec. 19 (c) of the latter Act, as amended, states that the Exchequer Court has exclusive original jurisdiction to determine every claim against the Crown arising out of any death or injury to the person or property resulting from the negligence of any servant of the Crown while acting within the scope of his duties. Moreover, as the Workmen's Compensation Board has the right, under the Workmen's Compensation Act, to bring an action against a third party who is liable for any accident to a workman or his dependants who have elected to claim compensation under the Act, the Board, the Exchequer Court held, was only exercising its statutory right in becoming a party to the action.

Before the Supreme Court, Counsel for the Crown argued that since the widow had elected compensation and had accepted it, she had suffered no loss or damage in law which would entitle her to an action against the Crown under the Exchequer Court Act, that she had assigned her right of action to the Workmen's Compensation Board and therefore was not entitled to one, that the British Columbia Workmen's Compensation Act is not applicable to the Crown, and that

the Board could acquire no right of action by subrogation under that Act. It was argued, further, that even if the claim was valid, the compensation paid under the Workmen's Compensation Act should lessen *pro tanto* the sum awarded by the trial judge.

Mr. Justice Kerwin stated that not only did the Exchequer Court Act confer power to adjudicate such claims, but it imposed liability on the Crown to pay damages for the acts of its servants where, in like circumstances, liability would rest on corporations or individuals according to the law of the Province in which the claim arose. He was satisfied that the British Columbia Workmen's Compensation Act

would not apply so as to reduce the claim of the dependant against the . . . wrongdoer . . . The Board is subrogated to the dependant's rights against the third party, and the Board's rights would not be defeated or curtailed by anything done by the dependants.

Liability to the same extent attaches to the Crown.

Mr. Justice Estey, with whom Mr. Justice Taschereau agreed, stated that the position of the party whose negligence caused the injury is unaffected by the provisions of the Workmen's Compensation Act. The Act provides, in effect, that Snell's claim, at common law, for damages continues and may be enforced.—*The King v. Snell and British Columbia Workmen's Compensation Board* 4(1947) Canada Law Reports 219.

Quebec

Appeal Court Quashes Conviction for Dismissing Trade Unionists

On June 27 the Quebec Court of King's Bench, Appeal side, allowed the appeal of Canadair Limited against conviction of an offence under Section 502A of the Criminal Code. The company was found guilty on November 27 by a jury in the Court of King's Bench of having dismissed from its employment, on January 28, 1946, some 18 workers for the sole reason that they were members of a trade union. The information was laid by the Montreal Aircraft Workers Local Union. Judgment in the appeal case was given by Mr. Justice Paul Casey with whom Justices Galipeault and St-Germain concurred. Justices Barclay and Marchand dissented.

The Court referred to the judgment of the Court of King's Bench in the *Society Brand Clothes* case (L.G., 1942, p. 872) that "the principal or determining cause" for the dis-

Vancouver Convictions for Obstructing Traffic Quashed by Supreme Court of Canada

On June 18, the Supreme Court of Canada allowed the appeals and quashed the convictions of two persons by a Vancouver Police Magistrate on charges of interfering with traffic and wilfully obstructing a police officer. The British Columbia Court of Appeal had upheld the convictions, Mr. Justice Bird dissenting. In the Supreme Court, Chief Justice Rinfret and Mr. Justice Kerwin dissented in one case; they would have dismissed one appeal and, on the ground that there was no evidence, would have allowed the other.

The appellants, two of about 100 persons holding a "tag day" for the lumbermen's strike fund, were convicted on and fined \$100 each under a Vancouver Street and Traffic By-law which forbids standing or loitering so as to obstruct or interfere with traffic and, also, the carrying of any advertising device on any street without the permission of the Chief Constable.

Walking back and forth on the street, holding out a box for contributions, the two were ordered by a police officer to move on. The Supreme Court held there was no evidence of violation of the by-law, of actual or possible obstruction of traffic, that the police were not acting pursuant to any duty imposed on them, and it was the "tagging" to which police objected; they had received orders to take in the "taggers".—*Johanson v. the King, Daniluk v. the King*. Supreme Court of Canada, June 18, 1947.

missal in that case was that the employees concerned belonged to a lawful trade union or lawful association of employees, but held that the workers of Canadair Limited were dismissed because they were contributing to "disturbance and unrest" in the employer's plant and that there was no proof that they were dismissed for the sole reason that they belonged to a lawful trade union.

The dissenting judges were of the opinion that the jury's verdict was not unreasonable and could be supported having regard to the evidence, and that the company's defence did not in law constitute a justification or excuse. *Canadair Limited and His Majesty the King*, Court of King's Bench, Montreal, No. 519.

Injunctions in Shoe Factory Strike

In connection with a strike at the shoe factory of Bennett Limited, at Chambly Canton, Quebec, the pickets, members of a

local of the United Rubber, Linoleum, Cork and Plastic Workers of America, were restrained by an interim order, issued on May 8 by Mr. Justice Salvas in the Superior Court of the Montreal District, from interfering with the entry or egress of any person or of any company equipment at the plant and from intimidating, following or besetting anyone.

On June 6 on the application of the company, the late Mr. Justice Forest issued an interlocutory injunction against the same local and a group of 15 members of the union. They were ordered to refrain from intimidation and to maintain the peace until the dispute between the strikers and Bennett Limited was finally adjudicated. A petition by certain union members for an injunction to prevent the company from entering into an agreement with a group of workers who returned to their jobs during the strike was refused in the same Court on June 19.

The local was certified on May 11, 1946, as the bargaining agent under the Quebec Labour Relations Act for the workpeople of Bennett Limited, but from that date until March 1 the parties were unable to arrive at an agreement. An arbitration board was then established by the Quebec Minister of Labour under the Trade Disputes Act, but the company refused to accept its recommendations. The workers, waiting until April 15, that is, more than the 14 days required by the Quebec Labour Relations Act, then struck, and pickets were placed about the plant.

Mr. Justice Forest found that the tactics used by the union leaders and members in intimidating workers and preventing them from working at the factory, were far from peaceful. The question for him to decide, he said, was not whether the strike was illegal

but simply to judge whether the picketing conformed with the law and the degree of civilization which we claim to have reached. The interim injunction had been violated and workers molested and intimidated. Legislators, Mr. Justice Forest stated,

in according to labour union such extraordinary means as picketing did not legalize or intend to legalize the use of threats, intimidation or bodily assault in order that strikes might stop those from working; nor did the labour laws authorize fomenters of discord to assail free citizens in order to prevent them from earning their daily bread according to the Divine precept. *Bennett Ltd. v. Local Union 313, United Rubber, Linoleum, Cork and Plastic Workers and Paul Blanchard and others.*

In rejecting the application of some 150 employees, members of the local union, for an interim injunction to restrain the company from making an agreement with a small group of employees who had returned to work, Mr. Justice Forest pointed out that the Quebec Labour Relations Act does not prohibit an unrecognized association from entering into an agreement although it stipulates that such an agreement becomes void if another association is recognized by the Labour Relations Board as representing the same workers. Neither did the Act prohibit any group from trying to obtain better terms during a strike. The Court considered that the petitioners did not give sufficient proof that they were members of Local 313, that they could not claim individually the status accorded by the law to the local union, and it was admitted that all those whose names appeared on the petition had not been consulted. The Quebec Code of Civil Procedure requires that only those who have an interest in a matter may appear before the Court, and no one may represent another.—*Emery et al v. Bennett, Ltd., and Prescott and others.*

Saskatchewan

Supreme Court Holds Labour Relations Board Has Legal Status for Purposes of Trade Union Act

On May 13 the Supreme Court of Canada allowed an appeal by the Labour Relations Board of Saskatchewan from a decision of the Saskatchewan Court of Appeal which quashed the Board's appeal in the case of the *Dominion Fire Brick and Clay Products Ltd.*, on the ground that the Board had no legal status and that it could not make an appeal concerning a decision it had itself made.

The case arose from an application to the Labour Relations Board by the Clay Products

Workers' Union for an order that the employees of the Dominion Fire Brick and Clay Products, Limited, with some exceptions, formed a unit appropriate for collective bargaining, that the union represented a majority of the employees, and that the company must negotiate with the union. The order of the Board to this effect was set aside with costs on July 16, 1946, by Mr. Justice Anderson of the Court of King's Bench, who held that the Board had no jurisdiction in the case, since, contrary to the Board's opinion, the company's business was "mining", a matter at that time for the Dominion and not for the Province. The Saskatchewan Court of Appeal on October 4,

1946, giving effect to the preliminary objection made before it that the Board had not sufficient interest or status to appeal the judgment of Mr. Justice Anderson, dismissed the Board's appeal. The Appeal Court held that the Board had made a decision by which one of the parties concerned was aggrieved but that the Board itself was not aggrieved; that it therefore had no interest in the appeal. (L.G., February, 1947, p. 202.)

Before the Supreme Court of Canada, the respondent company argued that the Board was a body unknown to the law, and therefore it could not appear in legal proceedings. This argument, Mr. Justice Kerwin considered was disposed of by the Saskatchewan Trade Union Act, 1944, Section 9, which stipulates that a certified copy of any order of the Board must be filed with the Registrar of the Court of King's Bench, and becomes enforceable as a judgment of that Court. On the same point, Mr. Justice Kellock, with whom Mr. Justice Rand agreed, stated that it was not for the respondent at this stage to object that the Board is not an entity distinct from its members, since the respondent itself designated the members of the Board by their collective name, and had obtained from Mr. Justice Anderson a decision in their favour, including an order for the payment of costs. Mr. Justice Kerwin pointed out that the Saskatchewan Court of Appeal was "clearly in error" in holding that the Board was not an aggrieved party, since costs were awarded against it by Mr. Justice Anderson. However, he considered that the

matter could be put on a broader basis . . . for many years it has been taken as settled that a body such as the Board has a right of appeal where its jurisdiction is in question.

The appeal being allowed, and this preliminary objection disposed of, the Supreme Court directed that the matter should go back to the Saskatchewan Court of Appeal for its determination as to the admissibility of certain affidavits filed by the Board and on the substantive matter raised by the original application for *certiorari*. The appellant was held entitled to its costs.—*Labour Relations Board of Saskatchewan v. Dominion Fire Brick and Clay Products Limited* (1947) 3 Dominion Law Reports 1.

Brakesman's Widow Loses Claim against Railway Company

An appeal by the Canadian Pacific Railway against an award in an accident case was allowed with costs by the Saskatchewan Court of Appeal on May 10. The judgment, based on the verdict of a jury, had awarded

\$15,000 damages to the widow and three children of a brakesman who was killed in June, 1945, while performing his duties in the railway yards. The Appeal Court held that there was no direct evidence, and no facts from which a reasonable inference could be drawn, as to the circumstances causing the accident.

The defendant company admitted liability under the Workmen's Compensation Act, R.S.S. 1940, c. 302, under which compensation is payable regardless of negligence, but denied liability at common law. Certain classes of men employed in train and engine service in Saskatchewan are excluded from the Workmen's Compensation (Accident Fund) Act but come within the earlier individual liability law, the Workmen's Compensation Act enacted first in 1910-11.

For the plaintiff, it was alleged that the defendant company and its employees were negligent in failing to provide a system for warning the deceased, in failing to keep a proper lookout, in operating a locomotive at an excessive speed under the conditions at the time, in failing to bring the engine and tender concerned to a stop before it touched the deceased, and in failing to provide a safe working place. The defence denied these allegations, and argued that the accident was due solely to the deceased's negligence in not exercising reasonable care.

The jury found the defendant's employees negligent in not having a man on the stirrup of the tender of the engine which was moving backwards. The Appeal Court found no evidence "which warranted this finding" and it was considered "perverse".—*Quiring v. C.P.R.* 2 (1947) Western Weekly Reports 81.

Switchman Allowed Damages for Negligence of Railway Company—Latter's Appeal Dismissed

On May 15, the Saskatchewan Court of Appeal allowed with costs the appeal of one defendant, and dismissed with costs that of another, being appeals against the award of damages to a switch foreman who was struck by a block of ice which fell from the top of a refrigerator car. The jury had assessed the blame attached to Canadian National Railways at 85 per cent and that to the Arctic Coal and Ice Company, at 15 per cent. Mr. Justice McNiven of the Court of King's Bench awarded damages against both defendants to the amount of \$6,495.

The plaintiff, who was employed by the defendant railway company, was moving, on January 7, 1944, a number of box cars, including a refrigerator car. Blocks of ice had been hoisted to the top of the latter car where

they were chiselled into the bunkers at each end of the car. The particular car had been "iced" a few hours before by the defendant ice company under a contract with the railway company which required it to sweep off the tops of the cars it supplied with ice. There was evidence that the car had not been inspected after the "icing", that there was no one whose duty it was to carry out such inspection, and that lumps of ice were found on the top of the car two hours after the accident. There was no evidence of negligence on the plaintiff's part.

The jury found that it was the duty of the railway company to inspect the top of the cars, and Mr. Justice McNiven considered that their finding of negligence was justified. The ice company was its agent and the railway company "cannot escape liability merely because its agent was negligent". The ice company was negligent, in the jury's opinion, in not getting a "clearance" from a responsible railway official that the car was left in safe condition.

The Saskatchewan Court of Appeal found that the Canadian National Railway was negligent in not inspecting the roof of the car. As regards the railway company's contention that the Arctic Coal & Ice Co. were independent contractors, that the ice was left on the roof through the collateral negligence of that company and that for such collateral negligence the railway company is not liable to the plaintiff, the Court held that "the employer of an independent contractor" is not liable for such negligence on the part of the latter but in this case the negligence of the contractor was not the direct cause of the accident. The railway company had the opportunity and, as the jury found, the duty of inspection, and could have averted the accident.

On the authorities, the original wrongdoer ceases to be liable, and the conscious agent is liable.

For this reason, too, the Arctic Ice and Coal Co. could not be held liable for negligence.—*Cook v. C.N.R. and Arctic Coal and Ice Co. Ltd.* 2 (1947) Western Weekly Reports, 73, 134.

Saskatchewan Labour Laws Held Not to Apply to Interprovincial Railway Companies

That Saskatchewan holidays and wages legislation does not apply to persons employed by the Canadian National and Canadian Pacific Railways was the decision of Mr. Justice H. V. Bigelow of the Court of King's Bench in Regina on May 19.

Prosecution of the two railway companies for failure to post notices as required by the Annual Holidays Act and Minimum Wage Act, was begun by the Saskatchewan Government in August, 1946. Both statutes require employers to post in a conspicuous place provisions of the Acts, or the regulations under them, so that the workpeople may be informed of the measures for their benefit.

The hearing before Magistrate Scott in Regina was adjourned for one week, but, in the meantime, the companies sought a declaration that these two Acts were *ultra vires* the Provincial Legislature in so far as they affected, or purported to affect, railways.

The test case came before Mr. Justice Bigelow in May, 1947. Included in the submission to the Court, in addition to the holidays and minimum wage laws, were three other provincial statutes, the Trade Union Act, 1944, the Workmen's Wage Act, and the Hours of Work Act, 1947. Lengthy argument was presented by both sides, counsel for the Saskatchewan Government contending that the legislation comes properly under the head "Property and Civil Rights in the Province" which the British North America Act assigns to the Provincial Legislatures, and that the "legislation is valid even in respect to matters which, under the British North America Act, are assigned to the Dominion Parliament until the Dominion has seen fit to legislate in that field". The plaintiffs argued that the legislation was legislation affecting railways, a subject assigned to the Dominion, and also affecting Trade and Commerce, another matter within the competence of the Parliament of Canada.

Mr. Justice Bigelow stated that he was satisfied and convinced that the five Acts in question in these actions, and the regulations made thereunder, are *ultra vires* or beyond the powers of the Saskatchewan Legislature in so far as they affect the plaintiff companies, and are exclusively within the powers of the Dominion Parliament under Section 92, head 10(a) and (c)... "Lines of... Railways" and "Such Works as... are Declared by the Parliament of Canada, to be for the General Advantage of Canada".

He continued:

In my opinion, the Acts in question would interfere very substantially with the management and operation of the railways; in fact, some of the legislation would be impossible to comply with, such as the Act requiring employees to work only eight hours a day. The services the plaintiffs give the public require them to run their trains twenty-four hours a day. I cannot see any practical way a train crew could be changed every eight hours.

I cannot agree with the contention of counsel that this legislation, in so far as it affects the plaintiffs, is open to the Province, so long as the Dominion has not legislated

concerning it. I think that the power to pass such legislation is exclusively given to the Dominion Parliament.

Having this opinion, it is not necessary for me to decide whether the Acts in question come within section 91 of the British North America Act, the "Peace, Order and good Government" clause, or the "Trade and Commerce" clause.

It was argued by the defence that hotels owned and operated by the railway companies should be treated differently from the railway lines. Mr. Justice Bigelow did not agree with this contention. He considered the hotels to be an integral part of the transport system. He expressed, with deference, his disagreement with the judgment of the British Columbia Court of Appeal in the *Empress Hotel* case and his concurrence with the dissenting opinion in that case of Mr. Justice O'Halloran. The *Empress Hotel* decision was summarized in the *LABOUR GAZETTE*, May, 1947, p. 700.

The Saskatchewan Government has stated its intention to appeal the decision of Mr. Justice Bigelow, particularly in its application to hotels operated by the railways.—*C.P.R. Company and the Attorney General of Saskatchewan and C.N.R. Company and the Attorney General of Saskatchewan*. May 19, 1947.

United Kingdom

English Court Awards Damages Against Employers for Statutory Breaches

In three recent judgments awarding damages for injuries received during employment, the English Court of Appeal found that the employer concerned had failed in his statutory duty. The judgments were reported in *The Ministry of Labour Gazette*, July, 1947.

WOODWORKING MACHINERY REGULATIONS

In one case, decided on February 6, a highly skilled workman, employed to manipulate a circular saw, had lost part of a finger. The guard to the saw did not comply with the Woodworking Machinery Regulations, 1922, since it did not extend from the top of the riving knife to a point as low as practicable at the cutting edge of the saw. The workman preferred to work with the guard some 3½ inches up, and it was his duty to adjust it. The Regulations require that guards shall be maintained in an efficient state and that the workers shall use and maintain in proper adjustment the guards provided in accordance with the Regulations.

The trial Court dismissed the action, holding that the accident was caused entirely through the workman's negligence, but damages were fixed at £600 in case another Court should decide differently. The workman

At the last Session of Parliament, an amendment was made to the Canadian National—Canadian Pacific Act, 1933. The amendment stipulates that the pay, hours of work and other conditions of employment of persons employed by the National or Pacific Railways, who are engaged in the construction, operation or maintenance of the railways, shall be such as are set out in any written agreements, respecting such employees, which are made between the companies and the representatives of the employees concerned if such agreements are filed in the Office of the Minister of Transport. The Minister of Transport on May 27 stated in the House of Commons that

The purpose of the Bill is to give the federal Government jurisdiction over rates of pay, hours of work and working conditions of the employees of the Canadian National and Canadian Pacific Railways. Parliament has exclusive jurisdiction over these railways, and the object of the Bill is to occupy the field in so far as labour relations of their employees are concerned. The Government considers it is now time for Parliament to exercise its jurisdiction by legislating in the field of labour relations as affecting the construction, operation or maintenance of these railways.

appealed on the ground that the employers' breach of statutory duty freed him from his common-law duty to take care. The Court of Appeal held that the employers had failed in their statutory duty and so had contributed to the accident. If the accident had occurred before the passing of the Law Reform (Contributory Negligence) Act, 1945, the workman could not have recovered because of his negligence. The damages were, therefore, apportioned equally between the two parties.—*Cakebread v. Hopping Bros. (Whetstone) Ltd.*

SAFE MEANS OF ACCESS

In another case in which judgment was given on February 27 and 28, the employers appealed against a decision of June 15, 1946, awarding damages to a workman for injury to his foot and the loss of a finger.

The workman, a fitter, after finishing his work on cylinder heads for aeroplane engines was required to take them down the shop to an inspector. On the occasion of the accident, when the two men reached the place where the cylinder head was to be inspected, two cylinders were already there and they were directed to put it in another place. To do so the workman moved backwards and fell against the blocks already there.

Judgment was given against the employers and the Court of Appeal dismissed their appeal, holding that the Factories Act stipulates that a workman must be provided with a safe means of access to every place he has to work at any time and that this extended to the short distance over which he and his mate had to move when directed by the inspector to deposit the cylinder head in a place different from the usual one.—*Hopwood v. Rolls Royce Ltd.*

ELECTRICITY REGULATIONS

In the third case the workmen had been found guilty of contributory negligence but the Court of Appeal reversed this decision.

The workman was a maintenance electrician employed by the first defendant, a steel company. A short circuit in the factory had failed to throw out the switches installed by the power company, and disengaged the switches installed in an outside power station belonging to the power company. When the supply of electricity from the sub-station was resumed, the current, unobstructed by the faulty switches at the factory, injured the plaintiff who was engaged in repairing the breakdown.

The defendants charged that the plaintiff was guilty of contributory negligence since he did not turn certain switches which would have cut off the electricity and prevented the second of two explosions. Both the defendant companies were covered by the Electricity Supply and Maintenance Regulations.

The Court of Appeal found the plaintiff not guilty of contributory negligence, holding that the Regulations required the steel company to maintain conductors so as to prevent danger, and the power company was held to have breached the Regulation making them responsible for maintaining in a safe condition all electrical apparatus placed by them on the premises of the consumer and belonging to them or under their control.—*Heard v. Brymbo Steel Company, Ltd. and another.*

Workmen's Compensation

Two interesting workmen's compensation cases, which were decided in February by the English Court of Appeal, were noted in *Industrial Welfare*, London, July-August, 1947. One case had to do with an accident which happened on the workman's way to work, the other with the compensation payable for partial disability when wages have declined.

WORKMAN ALLOWED TO START AFTER CONTRACTUAL HOUR IS IN "COURSE OF EMPLOYMENT" WHEN ON WAY TO WORK AFTER THE HOUR

A plasterer living in one town was employed in another. His contract stipulated that his starting time was 8 a.m., but he was allowed to travel by a train which arrived at the town of his employment at 8.15. One morning when walking to his work from the station by the shortest route, he slipped and suffered injuries. His claim, under the Workmen's Compensation Act, was refused on the ground that the Act did not cover an accident on the way to work.

The Court of Appeal, however, allowed the workman's appeal holding that the case did not come within the class of cases in which it had been laid down that a man, as a general rule, was not injured in the course of his employment when he was injured on his way to work. The Court considered that this case was one where, on the facts, it was clear that, at the time of the accident, the man was under a contractual duty to his employer. Being permitted to use the train arriving at 8.15, although he was paid from 8 a.m., he was under an obligation to proceed as quickly as possible to his work by the quickest route. It was in performing that duty that he was injured. The Court suggested that the view of the County Court should be tested by supposing that an officer of the company happened to meet the workman loitering on the way or diverging from the shortest route. The officer could properly have ordered him to proceed direct to his work.—*Dunn v. Lockwood and Co.*, February 14, 1947.

DISABILITY COMPENSATION TO BE BASED ON ACTUAL RATES BEFORE AND AFTER ACCIDENT REGARDLESS OF ECONOMIC CHANGES

In the other case a man, totally incapacitated by an industrial accident for six months, returned to work for which he was still partially incapacitated. On account of the weakening of the grip of his right hand, he was unable to do the heavy work he had done. When he applied for compensation on the ground of partial disability, the County Court found that he was then earning as much as he would have done if the accident had not happened, but that his actual earnings were less than his earnings before the accident, the reduction being due to the reduction in working hours following the winding up of war contracts. The Judge

awarded him 50 per cent of the difference between his present and his pre-accident earnings. The employers appealed.

The appeal was dismissed, the Court holding that if the workman was earning as much as he reasonably could, it was not open to the employer to reduce the "difference" between his earnings and his pre-accident earnings by showing that the reduction was due to changes in the economic position of

the labour market between the two dates. When a workman engaged on less well paid work as a result of his incapacity got more compensation because of such changes, the employer got the benefit. The result in both cases was anomalous, but the anomaly operated at times to the benefit of the workman and at others to the benefit of the employer.—*Sharplin v. Bawn and Co. Ltd.*, February 25, 1947.

Minimum Rates and Holidays for Restaurant Workers in the United Kingdom

Wage Order Ignores Tips in Assessing Minimum Rates

A WAGES Regulation Order applying to such unlicensed places of refreshment as restaurants, cafés, tea-shops, snack-bars and so on was issued on July 1 by the Minister of Labour and National Service of the United Kingdom. The Order, made under the authority of the Catering Wages Act, 1943, was based on the recommendation of a Wages Board composed of employers', workers' and public representatives.

In addition, a Holidays Order of the same date covering the same classes of workers requires the payment of wages to any workers required to work on any of the six "customary holidays" in each year or on any day proclaimed as an additional Bank Holiday or general holiday, and provides an annual holiday with pay between April 1 and September 30 of from six to 12 days according to the length of employment. A full-time worker employed for eight weeks is entitled to a holiday of one day; one employed for four years or more, to a 12-day holiday.

Orders making somewhat similar provisions as to wages and holidays have been made for other catering workers and, under the Wages Councils Act, for other classes.

If a worker in an unlicensed place of refreshment works on a customary holiday and his employer has agreed to allow him within 42 days a holiday, other than a day of rest or half day to which he may be entitled, he must be paid for all time worked on the customary holiday $1\frac{1}{2}$ times the amount he would have earned had the day not been a holiday, and for the day given in lieu of the customary holiday, not less than the amount to which he would have been entitled had he worked on that day. A worker required to work on a customary holiday and not given a day off in lieu of that holiday within 42 days, must be paid for all time worked on the holiday not less

than $2\frac{1}{2}$ times the amount to which he would have been entitled, had the day not been a holiday.

The Wages Regulation Order fixes minimum remuneration for a 47-hour week, or in the case of some workers, for each day worked in a 97-hour fortnight. The Order applies to men and women over 21 years of age; lower rates are fixed for juvenile workers according to age. The highest rates are fixed for London and the Metropolitan District. The rates are 3s. lower for places with a population of 10,000 or more and certain specified places, and 5s. lower than London for the rest of Great Britain. For workers with less than three months experience in the catering trade, the minimum rates are 10 per cent lower. For occasional workers hired on an hourly or day-to-day basis, the minimum hourly rates are the ordinary adult rates per hour increased by $12\frac{1}{2}$ per cent.

This Wages Order ignores income from tips. The Catering Wages Commission in a report issued on June 18 declared that it was "unanimously of the opinion that tips should be disregarded by the Wages Board in assessing statutory minimum rates of wages." The Commission agreed with a recommendation made by the employers' and workers' representatives on the Wages Board. The Commission stated that it did not expect tipping to disappear, but it believes that both workers and the public will benefit if tipping is no longer relied on as an essential part of a living wage. It notes the difficulty of any general assessment of the cash value of tips because of the wide fluctuation in the amounts given in the various establishments, and even between the amounts received by any one person at different times. The Commission admits that its recommendation may aggravate anomalies between tipped and untipped workers, but the

Wages Board regards this as a problem that must be solved, and expects that workers and employers will set up machinery for pooling gratuities so as to adjust differences of income. These suggestions by the Wages Board are, the Commission believes, "the right lines for future consideration."

The minimum rates are payable where the worker is normally provided by the employer with such meals as are available during the time the worker is on duty and where a uniform or overalls worn at work are laundered at the employer's expense or where no uniform is worn. Where meals are not provided, rates are increased by 8s a week and where a worker's uniform is not laundered at the employer's expense, rates are increased by 1s a week. On the other hand, where the uniform is provided by the employer and replaces the

worker's clothing, 1s a week may be deducted from the wages, or 6d a week where overalls are provided.

Special rates are payable for overtime. Time-and-a-quarter is payable for all time in excess of 9½ hours in a day and for the first six hours in excess of 47 in any week, and time-and-a-half for all hours in excess of 53 in a week. For work on Sunday, time-and-a-quarter is paid, but for all time worked on the "rest day", that is, one day in each week which has been notified to the worker before the beginning of the week as a "rest day" or failing such notification, Sunday, double time must be paid. A special rate of time-and-one-eighth must be paid, too, for all time worked between 5 a.m. and 7 a.m. and between 7 p.m. and 11 p.m. Time-and-a-quarter is payable for work between 11 p.m. and 5 a.m.

Employment, Hours and Earnings

Introduction

AN uninterrupted expansion in employment has characterized the employment scene during the spring and summer months of 1947. Although delays were feared because of the late spring, the break in weather conditions during the latter part of May brought about a rapid recovery. By the beginning of June, less than two per cent of the civilian labour force was unemployed. However, the abrupt rather than gradual opening up of seasonal activity added greater than usual pressure to labour requirements during the following months. To ease the situation, student labour was used extensively in practically all industries but despite this, labour shortages steadily increased. Primary industries particularly were urgently in need of help; in mining the opening up of new areas was proceeding with great difficulty because of the shortage of manpower.

The situation spotlighted the problem of matching workers with the jobs available. Geographical dislocation in a country the size of Canada was a great obstacle. Industries in Ontario and Quebec were seriously in need of workers, while a surplus of labour still existed in the Maritime and Pacific regions. Another factor was that much of the labour surplus was composed of partially-qualified, physically impaired and older workers, who did not meet employers' specifications. Immigration was being warmly supported as a solution to the present labour shortage problem and was particularly advocated in the primary and service industries.

The labour market, as reported by the National Employment Service, shifted from one of a surplus of applicants to that of a surplus of jobs during August. At the beginning of the month labour supply exceeded demand by 10,000; by the end of the period demand exceeded supply by 25,000. This trend towards a steadily tighter labour market was expected to continue into September and early October. At August 28, unfilled vacancies totalled 110,000, while unplaced applicants numbered 86,000 (60,000 male and 26,000 female). A steady decline in the number of persons claiming unemployment insurance accompanied the downtrend

in unplaced applicants. At July 31, the latest available date, 41,900 persons (27,000 male and 14,900 female) were registered for unemployment insurance.

Non-agricultural employment, as reported by the Employment Branch of the Dominion Bureau of Statistics, had made rapid strides by the end of June. The index of employment in the eight leading industries jumped by 6.0 points during May and June to reach the highest peace-time level at July 1. At that date, the employment index (June 1, 1941=100) totalled 123.8 in contrast to 113.6 one year before. Employment in firms reporting 15 or more employees stood at 1,946,000 at the July date.

Average hourly earnings in manufacturing rose substantially during May and June. A large proportion of collective agreements were re-negotiated during this period, many of which authorized considerable advances in wage rates. Hourly earnings of hourly-rated workers in manufacturing averaged 80.8c at July 1, as against 79.8c and 78.3c at the beginning of June and May respectively. At the same time the work-week was steadily reduced, dropping from 43.2 in the last week of April to 42.1 during the comparative period in June.

In the Maritime region, the labour surplus declined during July, but since unemployment was chronic rather than seasonal absorption was far from complete. The outlook, however, was fairly encouraging. The renewal of British contracts for Maritime lumber was expected which would maintain employment in the logging industry at a good level; demand for pulpwood cutters was heavy even during the off-season summer months. The dollar crisis might affect United Kingdom commitments, however, in which case agriculture would face the loss of a major market. Full recovery from the coal strike repercussions was evident in the trade and transportation industries. Shipyards at Halifax were busy with repair work; employment was at the highest level since the major lay-offs of the war. Construction work was gaining rapidly, although supply shortages were still

(†) Not available.

(1) Estimates are based on sample Labour Force Survey of the Dominion Bureau of Statistics. All figures represent persons 14 years of age and over.

(2) Statistics are based on the eight leading industries. Data are compiled from reports of firms with 15 or more employees.

(3) Weekly average for month in non-agricultural industries reporting to National Employment Service.

(4) Average hourly earnings and man-hours apply to manufacturing only.

(5) During the month.

(*) For more recent figures, see below, under Operations of the National Employment Service.

a problem in some areas. The fishing industry had suffered a major set-back because of a reduced market in the United States; greater competition and the end of meat rationing chiefly caused the slump.

The Quebec region reported that industrial activity was at the peak peace-time level. Many manufacturing plants closed during July for summer vacation periods, but full-scale production was again under way. Cancellation of export orders had interrupted production somewhat in the footwear industry. In the mining industry, the labour situation was critical; miners were leaving temporarily for outdoor summer work and, at the same time, many new producing mines were just opening up. Some five hundred Polish veterans were recently distributed to farms throughout the region. Skilled construction tradesmen were scarce even though high costs and material shortages held back many projects.

In the Ontario region, most industries were producing to the limit of available materials and labour, although vacation shutdowns during July temporarily slackened hiring activity. Demand for heavy workers far exceeded supply; at the same time the "weeding out" process continued in many industries, so that the available labour surplus tended to deteriorate in quality. The movement of workers from Nova Scotia had greatly aided heavy industry in particular. Food processing plants were very busy with seasonal crops, and a labour shortage appeared certain for the early fall. The farm labour shortage was intensified by greater needs as the result of rainy weather; 2,000 Western harvesters were required but only 1,000 men came. The pulpwood industry expected to absorb 1,400 displaced persons from camps in Europe, about half of whom had already arrived. Higher wages in the mining industry still could not attract sufficient workers.

In the Prairie region, employment was highly seasonal and thus was subject to considerable fluctuation. By the middle of Aug-

ust, employment was approaching its yearly peak, and already the scarcity of labour was becoming a problem in some areas. Light rainfall and extreme heat affected crop prospects in large areas of Saskatchewan and Alberta. A great demand for Eastern harvesters was still expected, however, since this year crop conditions indicated that men might be needed simultaneously in all three provinces instead of being transferred from one district to another as the harvest progressed. Requirements were, therefore, expected to be comparatively greater and the season much shorter than in a normal year. Certificated miners were required in all branches of the mining industry, but particularly in coal mining. Firms in the building materials industry were operating at capacity. Pulp and paper mills reported great activity. Construction projects were straining the supply of materials and skilled workers in some areas. Construction labourers in rural districts may delay building progress by leaving their jobs during the harvest period.

In the Pacific region, seasonal expansion in primary industries, which supported the bulk of the region's employment, was straining manpower resources. Most negotiations had been completed without work stoppages, and this had contributed greatly to the high level of general employment. The mining industry was seriously in need of workers; if several hundred hardrock miners could be obtained, they would create jobs for many hundreds of unskilled men. Training programs instituted by a few large operators were making some contribution to the skilled labour pool, but high turnover, to a degree, offset this effort. The farm labour situation was well under control. Current labour demand in the logging industry was heavy, since the likelihood of fire hazard had been lessened by weather conditions. The great industrial construction program continued to expand, absorbing more and more workers, but residential building had declined. Skilled carpenters and trowel tradesmen were in short supply.

Labour Force Survey, May 31, 1947

A GAIN of 256,000 in employment coupled with a decline of 51,000 in unemployment from March 1 brought the civilian labour force up to 4,912,000 by May 31, the last survey date. This is a net addition of some 206,000 from this year's March estimate and just 84,000 above the level at the same time last year. The annual seasonal peak is expected to be reached at about the beginning of October.

The total civilian non-institutional population stood at 8,930,000 in the last week of May—up 212,000 from last year's June 1 estimate.

These labour force survey estimates, released by the Dominion Bureau of Statistics, cover the week ending May 31, 1947, and describe the labour market status of the civilian non-institutional population. Table I below broadly classifies the employment

status of Canadians, 14 years of age and over, showing the short run fluctuations which occurred between the May 31 estimates and three and twelve months earlier.

Who Is Counted in the Labour Force

The survey interviewed over 50,000 households across Canada, which formed a scientifically designed 2 per cent sample of the civilian non-institutional population. The main aim was to break down the total population to show the volume of employment and unemployment. Classification of those interviewed is based on their activities during the specific survey week ending May 31.

The survey defines the employed as those who did any work in that week or who had a job from which they were temporarily absent because of vacation, illness, bad weather, labour disputes or layoff of less than 30 days.

The unemployed group includes those who were looking for work but who were not at work in the survey week.

The segment classed as not in the labour force includes students, those keeping house, and those who are retired or either too old or unable to work.

Employment

Total civilian employment stood at 4,821,000 at May 31—some 256,000 above the level at the same time last year. About 20 per cent or 1,060,000 of these were women.

Agricultural Employment.—The last week of May saw agricultural employment at the 1,163,000 mark—just 100,000 below last year's June estimate. The generally late spring and bad weather put a temporary brake on the full impact of seasonal forces on farm employment. The peak is reached annually in the late summer or early fall. Some 125,000 men and 107,000 women entered agricultural employ-

ment between the March and May survey dates.

Regionally, Ontario and the Prairies accounted for nearly 75 per cent of the total national gain in farm employment in the three months ending May 31.

Non-Agricultural Employment. — Broadly, the forces which pushed employment up to its high level in the first half of 1947 are the easing of the material supply situation, a serious limiting factor on non-agricultural employment, and the relative absence of labour unrest, with the exception of the localized Maritime coal strike in the early spring.

Further, foreign and domestic demand, with the exception of buyer resistance in certain consumer goods lines and in residential construction, is still strong enough to support high levels of production and employment.

The May 31 estimate of non-agricultural employment, 2,658,000, is just 7 per cent above the comparative period last year. All regions registered a gain from the March estimate except the Maritimes, where employment since the end of February is down 20,000 in industry other than agriculture. Ontario and British Columbia compensated for this loss with the most substantial regional gains—16,000 and 20,000 respectively, in the three months ending May 31. Advances were milder in other regions.

The construction industry registered the strongest gain in the three-month period with an employment advance of 67,000 and the peak yet to be reached. This is just 13,000 above last year's June estimate. Material bottlenecks and shortages of certain types of building tradesmen still restrain the unprecedented construction boom—which falls short of the substantial demand backlog for commercial, institutional and residential building.

Manufacturing employment added another 22,000 between March 1 and the end of May,

TABLE I—SUMMARY OF NATIONAL ESTIMATES

(Thousands of persons, 14 years of age and over)

(Source: Labour Force Survey, Dominion Bureau of Statistics)

Population Class	May 31, 1947		March 1, 1947		June 1, 1946	
	No.	%	No.	%	No.	%
Civilian Non-institutional Population.....	8,930	100.0	8,936	100.0	8,718	100.0
Civilian Labour Force.....	4,912	55.1	4,706	52.7	4,828	55.3
Employed.....	4,821	98.1	4,565	97.1	4,702	97.3
Unemployed.....	91	1.9	141	2.9	126	2.7
Not in the labour force.....	4,018	44.9	4,230	47.3	3,890	44.6

reaching 1,325,000—an all-time high, just 70,000 above the estimate one year ago.

The services industry at the last survey date was at the interim period preceding the sharp seasonal upturn. Employment in this industry stood at 823,000, the peak to date, with the year's high mark yet to come when the tourist season reaches its height in the summer.

Total non-agricultural employment stood at 3,618,000 at May 31, just 24,000 above March 1 and 220,000 above last year.

Unemployment

Only 1.9 per cent of the labour force was unemployed at May 31. A further decline of 50,000 from the March figure brought the national unemployment level down to 91,000 at May 31. This is the lowest point for this time of the year since 1944. The downturn was general to all regions except the Maritimes, which showed no change. Some 16,000 women were classed as unemployed—representing no change from the end of February. Total unemployment is 35,000 lower than one year ago.

The manufacturing and service industries registered the bulk of the unemployed—with 25,000 and 15,000 respectively. Transportation and communication were next with about 9,000 each, construction with 8,000 and the remaining 8,000 centred in mining, forestry, fishing and trapping. About 17,000 of the unemployed could not be industrially classified because they had never worked.

Not in the Labour Force

The non-labour force group, which amounted to some 4,018,000, dipped 212,000 from the March date. About 7 per cent of these were keeping house, and 16 per cent were in school. About 7 per cent were unemployable by reason of age or inability to work, leaving a small residue of 7,000.

One year ago the non-labour force group was down 128,000 from this year's estimate. Some 110,000 of these are women who dropped out of the labour force during the past 12 months to keep house. The student group shows an increase of 21,000 in the same period, thus showing a net annual increment to labour supply of about 3,000 workers.

Employment and Payrolls at the Beginning of July, 1947

SUBSTANTIAL increases in industrial employment were reported to the Dominion Bureau of Statistics at the beginning of July, when general improvement was indicated in all provinces, and in most industrial groups, manufacturing and non-manufacturing. The expansion was seasonal in character, but the percentage gain in Canada as a whole was slightly above the average for the time of year. The 17,760 co-operating employers in the eight major industrial groups had a staff of 1,946,032 men and women, a total which exceeded by 46,964 persons, or 2.5 per cent, the number they had employed at June 1; this advance was accompanied by that of 2.8 per cent in their disbursements in weekly salaries and wages. Based on the 1926 average as 100, the general index number of employment stood at 189.0, as compared with 184.5 in the preceding monthly survey, and 173.6 at July 1, 1946, when several important industrial disputes had been in effect. The figures at July 1 in immediately preceding years were as follows: 1945, 175.5; 1944, 183.5; 1943, 183.7, and 1942, 175.7. The latest index is the highest in the record for July. The indicated increase in employment as compared with the war years is due in the main to improvement in the non-manufacturing classes, while that

shown in comparison with the pre-war situation results from generally heightened activity in both manufacturing and non-manufacturing industries.

There were pronounced increases at July 1 as compared with a month earlier in manufacturing, notably in food processing, lumber, pulp and paper and iron and steel plants. Among the non-manufacturing divisions the movement was decidedly upward in mining, communications, transportation, construction and maintenance, hotels and restaurants, and in retail and wholesale trade. Only in logging was there a general though moderate decline; this was seasonal, although it was rather less than normal for July 1 in the experience of earlier years for which data are available. The expansion in the groups just mentioned was also seasonal in character. In some cases, the reported gains were above average for the time of year. In transportation and construction, however, the improvement was rather less than normal. In mining, the considerable increase largely resulted from the resumption of operations on a more usual scale following the settlement of the dispute in the coal fields of the Maritime Provinces which continued to affect the situation at June 1.

Payrolls.—As already stated, the pronounced advance in industrial employment at the first of July as compared with June 1 was accompanied by a relatively greater rise in the weekly salaries and wages¹ distributed by representative employers in the eight leading industries; their payrolls rose from \$68,375,865 in the last report, to \$70,317,314 at the date under review. The greater percentage increase in the payrolls than in the personnel was partly due to the payment of higher wage-rates in certain industries, but the settlement of the

Maritime coal strike was also a factor. The weekly average per employee was \$36.13, as compared with \$36 at the first of June; the per capita figures at July 1 in earlier years of the record were as follows: 1946, \$32.25; 1945, \$32.32; 1944, \$31.72; 1943, \$30.97; 1942, \$28.49, and 1941, \$25.49. Since the beginning of the monthly record of payrolls at June 1, 1941, there has been an increase of 43.1 per cent in the average weekly earnings of the workers employed by the reporting firms in the eight leading industries as a whole.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries with the exception of electric light and power.

² Mainly hotels and restaurants, and laundries and dry-cleaning plants.

When the figures of employment and payrolls in financial institutions are included, the survey shows that the total persons on the staffs of the reporting establishments in the nine leading industries at July 1 numbered 2,026,375, as compared with 1,979,201 at the first of June. The indicated weekly salaries and wages increased from \$71,381,916 at that date, to \$73,330,882 at the beginning of July. The per capita earnings in the nine industries stood at \$36.19, as compared with \$36.07 at June 1, and \$32.35 at July 1, 1946.

The index numbers of payrolls are based on the weekly salaries and wages disbursed by the co-operating firms at June 1, 1941, as 100; to facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original bases, 1926=100, to June 1, 1941, as 100. The accompanying Table I shows that in the period for which information on payrolls is available, the number of persons on the staffs of leading establishments in the eight main industrial groups has increased by 23.8 per cent, and the aggregate weekly earnings by 73.3 per cent. Including finance, the increase in employment from June 1, 1941, to July 1,

1947, amounted to 24.1 per cent, while the gain in the salaries and wages in this comparison was also 73.3 per cent. In previous monthly bulletins, the following factors have been cited as largely responsible for the much greater rise in the payrolls than in employment: (1) the payment of higher wage-rates in very large numbers of industries and establishments, in addition to the general increase resulting from the mandatory payment of cost-of-living allowances to the majority of workers; the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage-rates as from February 15, 1944; (2) the progressive up-grading of employees as they gained experience in their work; and (3) reductions in the numbers and proportions of women workers.

The gain in employment in manufacturing during the period for which data on current earnings are available amounted to 19.3 per cent, that in the indicated salaries and wages to 67.5 per cent, while the weekly average earnings have advanced by 42.5 per cent. The increase in recorded employment in the non-

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

manufacturing industries taken as a whole in the same period was 29.6 per cent, and that in the weekly payrolls, 80.9 per cent.

With regard to the marked variations in the average earnings of workers in the different industrial classes it must be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of paramount importance.

The Sex Distribution of the Persons in Recorded Employment

The 1,946,032 employees of the establishments co-operating at July 1 in the eight leading industries were made up of 1,535,816 men and 410,216 women, the proportions being 789 of the former sex and 211 of the latter in each 1,000 workers in recorded employment. The number of men showed an advance of 40,207, or 2.7 per cent, as compared with June 1, while the gain among women was 6,757, or 1.7 per cent. The ratios at June 1 were 788 men and 212 women per 1,000

employees, and those at July 1, 1946, 779 men and 221 women per 1,000 persons on the staffs of the reporting employers.

Firms in the nine major industrial groups showed a gain of 47,174 persons in the month, the additions being made up of 40,239 men and 6,935 women. The percentage advance among the former sex amounted to 2.6 per cent, and that among the latter, to 1.6 per cent. The ratio of women per 1,000 persons of both sexes in recorded employment in this group of industries was 221, the smallest in the record; at June 1, 1947, the proportion was 222, while that at July 1, 1946, was 231. The proportion of women in recorded employment had reached its highest point at October 1, 1944, when such workers constituted 261 per 1,000 persons reported in the eight leading industries, and 271 per 1,000 in the nine main industrial divisions.

There were increases at July 1 as compared with June 1 in the number of men reported in all the major industrial groups except logging, there being especially large gains in manufacturing and construction. Improvement in the situation for women was also indicated in manufacturing and in mining, communications, transportation, construction, hotels and restaurants, trade and finance.

As compared with July 1, 1946, there was an advance of over 10 per cent, in the number of males on the staffs of the reporting establishments, accompanied by that of four per cent, in their women employees.

Operations of the National Employment Service

BY July, the placement problem was to find the worker for the job rather than the job for the worker. Fewer persons were registering for employment than at any time in the post-war period. At the beginning of June less than 2 per cent of the labour force was unemployed. Thus, activity during June and July was concentrated largely on the selective placement of school graduates entering the labour market for the first time, and the directing of physically handicapped labour to employment where they would be most productive. Available labour supply fell by 16,000 during July and 13,000 in August to reach less than 86,000 at August 28.

The prospects of obtaining sufficient labour for peak fall activity were slim. Predicted harvesting needs in the Prairies were large, despite below-average crop prospects. Food processing plants were planning an extensive program which would probably gain momentum by October. The late spring was expected to prolong the agricultural season, which, in turn, would affect fall employment in the woods. The shift to large-scale industrial construction tended to lengthen the construction season.

Employment offices would not only have to face rising industrial needs but also a labour force sharply depleted by the withdrawal of thousands of university and high school students.

Agriculture

The seasonal movements of farm labour, under the direction of National Employment Service, were proceeding as scheduled. The transfer of Prairie workers to British Col-

umbia berry fields had concluded with some 850 workers moved under the excursion. Recruitment of Western farmers for Ontario amounted to less than 1,000 workers, con-

sequently additional help was brought in from Quebec. Two excursions were charted to begin during August—the trek of Eastern help to the Prairie harvest and of the tobacco hands from the southern United States to Ontario. At September 3, the latest available date, the Prairie excursion had reached the 1,400 mark while the tobacco movement was expected to near 1,500.

Expectations of below-average yields in the Prairie provinces did not weaken labour demand greatly. The most serious drought areas were largely equipped with combine

machinery where there would normally be relatively little demand for help. Also the likelihood of simultaneous ripening of crops within the three Prairie provinces would prevent the usual inter-provincial exchanges of help, so that calls for outside help would be greater than usual.

Reporting of vacancies gained momentum, jumping from 1,022 per week in June to 1,442 during July. Accordingly, placements rose, and totalled 997 per week during the period. Approximately one-quarter of these were filled through transference of help.

Non-Agricultural Industry

Vacancies Notified

The usual summer lull in employment expansion occurred during July with vacancies notified levelling off at the June total. Spring expansion activity had absorbed the winter unemployed by about the beginning of June and by early July available labour had narrowed down to “first jobbers”, students, the physically unfit, and persons shifting from job to job.

During July, demand receded in all main industry groups with the exception of logging

and manufacturing. In logging, summer replacement needs and advance orders for the winter season upped labour requirements. In manufacturing, the monthly upswing was caused by the heavy canning season, and renewed activity in the secondary textile mills.

Average weekly vacancies numbered 30,414 during July leaving 86,809 unfilled at the end of the month. Slightly more than one-third of the vacancies remaining on file were for women.

Logging.—Logging drives in most regions had been completed by the end of July. Employment in summer improvement and camp construction work was relatively low due to the fly season, warm weather, and heavy labour turnover. Winter demands will be eased by the arrival of immigrants from the Displaced Persons camp, of whom 1,400 were already scheduled to take up work in the Ontario logging camps.

Logging requirements rose by 72 per cent during July to average 2,900 per week over the period. At the end of the month 12,283 remained on file.

Mining.—Demand for mining labour was reaching serious proportions. In Quebec, particularly, the exit of workers to farms, construction, and woods work was causing great concern as replacements were almost unobtainable. Limited housing accommodation confronted expansion throughout the Dominion although completion of company housing projects in a few areas had improved the situation. The most urgent requirements were for experienced miners and several mining companies had begun training courses to relieve the shortage. Demand was concentrated mainly in the gold mining industry with abundant openings available for both underground and surface workers. The strict physical requirements in this industry, however, greatly limited referral activity.

Production had been resumed in the Maritime coal mines on a reduced scale, consequently labour requirements were small. In the Prairie and Pacific regions demand was growing, and plans were under way to transfer miners from the Cape Breton and New Glasgow areas.

Despite the fact that fewer vacancies were reported in July, labour requirements steadily

accumulated. Vacancies in the mining industry averaged 873 per week during July, to leave 3,518 on file at the month end.

Manufacturing.—Labour requirements in manufacturing moved upwards slightly during July due to seasonal activity in food processing plants and textile mills. Holiday shut-downs, coupled with continued material shortages, slackened industrial demand elsewhere.

Foundry help continued to be scarce despite the growth of training schemes designed to encourage beginners into the trade. The abundance of alternative opportunities, the extremely hot working conditions, and the physical endurance needed made recruiting difficult.

Secondary textile mills were active on production of the fall line of clothing. Permanent as well as seasonal labour was required and some plants were undergoing decentralization so that all available sources of labour might be tapped.

Food canneries were preparing for an exceptionally active season. Berry crops, particularly strawberries, were well above average and a fairly heavy fruit crop was expected. Labour scarcities were beginning to appear but the full force of demand would not be felt until September when the industry would have to face, not only the withdrawal of student labour, but also increased seasonal activity. Full crews for fish canning plants in British Columbia were assembling with no serious manpower shortages having yet arisen.

The manufacturing industry reported 9,072 vacancies per week in July, representing a 7 per cent gain during the month. At July 31, there were 27,232 vacancies remaining on file.

(1) Latest figures subject to revision.

Construction.—By the end of July, there were two jobs for every one applicant in the construction trades; in the Maritime region only, applicants exceeded vacancies. The greatest discrepancy between demand and supply was in the carpentry and bricklaying trades although cement and concrete finish workers were in short supply. Material shortages, especially electrical appliances, plumbing, cement and high-grade lumber, were also holding up construction work.

Construction work was swinging into industrial and institutional projects as activity withdrew from the residential field due to rising building costs. The larger industrial projects were expected to offer a longer season of activity which should reduce the winter unemployment problem.

Road construction was active in all parts of the country despite material and labour shortages. Asphalt and other road oils were in

short supply. The most pressing labour needs were for machine operators and heavy truckers.

Railway construction also was held back by manpower scarcities. Low wages and in-different housing facilities discouraged recruitment of help.

Vacancies reported in the construction industry maintained a constant level during June and July. At July 31 unfilled vacancies numbered 10,969 (5,660 skilled and 5,309 unskilled) while unplaced applicants totalled 5,337 (2,769 skilled and 2,568 unskilled).

Trade.—Restraint in consumer spending has continued throughout the spring and summer season despite the additional business provided by the tourist traffic. Resistance to higher prices, inferior stock on hand and the down-trend in real wages (earnings adjusted according to changes in cost of living) were largely responsible for the slack in buying. To increase trade, retailers had resorted to a larger and more diversified quantity of summer sales.

Replacement needs for the holiday season and additional staff requirements during the summer sales provided temporary employment for many students. Opportunities were also open for employment on a permanent basis but qualifications were strict.

Vacancies during July receded slightly to average 3,380 per week. At the end of the month 8,234 remained on file.

Service.—The almost uninterrupted demand for women in industry and offices since 1941 had placed a constant drain on female employment in the service industries. In June, 1941, women in the service industry totalled 461,000 or 57 per cent of the total female employment; in June, 1947, the corresponding figures were 356,000 or 34 per cent. Male service employment, however, presented a different picture. The unskilled, the physically handicapped, and the older man were seeking service work since it offered steady, secure, and relatively light work suitable to their capabilities. The result had been that demand in the service industry had weighed heavily for women while registration of workers was concentrated among men. At the end of July there were three jobs to offer every female service worker while only one job existed for every three men registered.

Orders for women in domestic work were increasing in anticipation of the immigration of displaced persons scheduled to begin in September.

Dry cleaning establishments and laundries were particularly hard-pressed for labour dur-

ing July due to increased labour turnover. The hot, humid working conditions during the summer together with the abundance of alternative jobs available resulted in a noticeable exit of workers from the industry.

Vacancies in the service industry (other than public and professional) averaged 5,476 per week during July to leave 16,122 on file at the end of the month.

Applicants Registering

The day-by-day registrations for work had consistently fallen off since the beginning of the year, with the exception of the June period when the influx of first jobbers caused a slight increase. The lowest recorded registration took place in July when 28,518 persons reported each week as against 29,921 and 35,802 one month and one year before respectively.

In general, it reflected a full and relatively stable employment situation in contrast to the unsettled labour conditions existing one year ago. During July, 1947, there were 3,112 workers involved in strikes or lockouts with a time loss of 24,355 man-days. In July, 1946, there were 50,429 workers involved resulting in a time loss of 915,911 days. Also completion of physical reconversion, improved material supply lines, and the general uptrend in wages tended to steady labour market operations during 1947.

The highly competitive labour market was beginning to noticeably increase labour turnover. However, most of the shifting between jobs was carried on under pre-arranged agreements with employers rather than through the Employment Service.

By the end of July, available labour had been carefully screened and sifted to meet the jobs on hand. Applicants in the "more employable" age (20-44 years) had been reduced from 60 per cent of the unplaced at the end of April to 53 per cent at July 31. Conversely, the more difficult to place applicants (aged 65 and over) jumped from 8 to 10 per cent while the "under twenty" applicants jumped from 10 per cent to 19 per cent. In the younger age groups many were seeking only temporary work during the summer vacation and consequently were suitable for only certain kinds of jobs.

Unplaced applicants at July 31 had fallen to 98,891. With labour requirements normally reaching their peak in September, it appeared that a steadily tightening labour market would develop during the next two months.

Referrals

Referral activity during July reflected the pressure of a steadily declining labour supply. The early scaling down of available labour tended to limit referral activity later in the season. Thus, despite the favourable employment conditions in existence, referrals declined

All industries.....	31,855	25,161	16,418

by three per cent. An average of 24,223 referrals were effected each week during July which was comparable to the April level. The downtrend during July took place in all main industry groups with the exception of mining and food processing industries.

The proportion of applicants referred to jobs fell slightly during July. Whereas in June, 45 referrals were effected per 100 available applicants (those on file at the beginning together with those notified during the period) by July the percentage had dropped to 42. At the same time, a smaller proportion of jobs received referrals with the percentage declining from 50 to 45 per cent of available vacancies.

Placements

The constant level of placements during the past three months in the face of lessened referral activity, was indicative of the tight employment situation. Employers were relaxing hiring specifications and persons, who in a freer labour market might not have been accepted, were placed into employment. Temporary student labour was being used to a great extent. The physically handicapped and older workers were constantly screened and re-screened to meet expanding employment opportunities. Labour surplus areas were being drained to meet rising manpower needs in other areas.

The industrial distribution of placements showed only minor changes during July. Added placement work in mining, food

processing, trade and services offset slow-downs in sawmills, construction and heavy industry. Placement of men continued to be approximately double that for women. Average weekly placements totalled 15,422 during July as compared with 17,015 one year before.

Both seasonal and long-term movements of workers took place during July. Temporary transfers were largely in construction, transportation, and sawmills. Long-term movements were mainly into mining and machinery manufacturing; the Cape Breton area had moved 2,210 workers (2,047 male and 163 female) by September 4.

Casual placements, or those of less than seven days' duration, continued to account for 12 per cent of placements reported during July. The following table gives a summary of casual and regular placements since the beginning of 1937:—

Year	Placements

Special Placements

The approach to placement work tends to change as the labour market shifts from one of labour surplus to one of labour shortage. When vacancies were scarce the problem was to get a job for the worker; as employment expanded, it became one of getting a worker for the job. Necessarily, the latter approach called for a careful and selective analysis of all available labour. With this in view, employment officers were examining all potential sources of labour during the period under review. Physically handicapped labour was one segment of the labour force in which unemployment continued. In order to make the best use of this reserve of manpower, selective placement officers were endeavouring to make an individual study of the capabilities of each applicant. This analysis, along with a thorough knowledge of the job requirements, aided the officer in selecting the most

productive line of work for the impaired worker.

Placements of the physically handicapped were temporarily reduced during the June-July period, due in the main to the shorter reporting period. Placements from June 16 to July 14 totalled 1,154 as against 1,489 and 1,213 one month and one year before respectively. At the July date, 5,099 remained unplaced.

The enlargement of N.E.S. facilities designed to deal with youth placements had greatly increased the number of "first jobbers" channelled through the local employment offices. At the end of July, 19 per cent of available supply was under 20 years of age as against 13 per cent one year before. Employment offices reported that, in general, absorption had been proceeding satisfactorily although the low wages in some areas increased labour turnover.

Executive and Professional Offices

In contrast to the trend earlier in 1947, fewer vacancies and applications were reported in E and P offices during June and July than in the corresponding period in 1946. The reduced activity in the latter part of the season reflected the speedy absorption of university graduates. One year before, labour unrest and reconversion difficulties reduced technical and administrative requirements, so that a greater length of time was needed for placing the graduating class.

In the executive field, the placement problem pivoted on the selective placement of the qualified but older worker. Many employers had been discriminating against workers of more than 45 years of age. How-

ever, the publicity given to the serious implications which might arise out of this employment practice improved both the quantity and quality of jobs open to these applicants.

Vacancies in the executive and professional field jumped from 180 per week to 195 during July. Applications, on the other hand, continued to fall from the May peak and by July averaged 219 each week. Fewer placements were effected due to the falling off in labour supply; average weekly placements fell from 69 to 59. At the end of July unplaced applicants numbered 2,023 while unfilled vacancies totalled 1,824.

Veterans

Applications.—Seasonal expansion had absorbed available labour by the end of May, consequently veteran applications dropped sharply during June and July. The decline was common to discharges of both World Wars, although slightly more pronounced among the younger group. Average weekly applications totalled 6,044 during July as against 7,087 in June and 10,220 in July, 1946.

Placements.—Veteran placements fell sharply in contrast to the constant level maintained in the general field. The stable level of general activity resulted from the absorption of first jobbers from high schools, very few of whom were veterans.

The problems confronting veteran placements were similar to those experienced in general referral work—"older age" discrimination, immobility of workers complicated by housing shortages, the difficulties arising out of occupational shifts, lack of qualified applicants, etc.

Placement of handicapped persons slackened during the June-July period as persons on file were gradually being pared down to cases of extreme physical handicaps. Placements from June 16 to July 14 totalled 657, to leave 1,863 unplaced at the period-end.

Total veteran placements during July averaged 3,372 per week representing a 16 and 37 per cent drop over the previous month and year respectively.

Unplaced Applicants.—By the end of July the unplaced had fallen to 25,125, or 25 per cent of the total unplaced. Almost 20 per cent of the veterans unplaced were registered in the chronic unemployment areas of Nova Scotia. The remaining applicants were scattered throughout the country, the heaviest concentration being in Vancouver.

The length of time which applications remained on file showed a sharp fall during July. At July 31, applicants registered for more than two weeks accounted for 65 per cent of the total in comparison to 72, 73 and 77 at the preceding month-end dates.

Regional Analysis

The following regional analysis is based on reports received from National Employment Service offices throughout the country. The report covers the month of July, 1947.

Maritime Region

Reports from the Maritime Region showed that all industries were making marked progress under favourable weather conditions and without any serious labour shortage materializing. While Cape Breton and New Glasgow areas were still reporting a surplus of unplaced workers, New Brunswick and

Prince Edward Island had materially reduced the number left on file.

Agriculture.—Fine weather had prevailed resulting in the harvesting of an average crop of hay. While early potatoes were inclined to be poor, it was expected that there would be a good crop of the late varieties. Thus far there had been no noticeable shortage of farm help. Already contracts for seed potatoes had been signed at an average price of \$3.50 per barrel.

It was estimated that while the Annapolis Valley apple crop would be average, it would

be 60,000 barrels short of last year's production. The market outlook was uncertain because of the loss of United Kingdom orders.

About 150 workers from Saint John had been referred to employment as pea-viners in the state of Maine.

Fishing.—The drop in price and the loss of markets had caused the fishing industry to curtail operations. This had an adverse effect on such industries as boat building, lumbering, shook milling and salt mining.

Lumbering.—A steady demand existed for pulp workers in all areas but it was not expected that any large number of workers would accept this employment during the fly season. However, it was expected that once the cooler weather arrived workers would be attracted by the good wages being offered. The advertising campaign for loggers launched by a Vancouver logging agency offering permanent employment at a minimum wage of 95c per hour, was causing some concern. With

the expected heavy demand for skilled lumber workers in New Brunswick next winter, it was felt that the industry could not afford to have many men leave the province.

Mining.—The general picture in the mining industry was bright with the Cape Breton area reporting substantial increases in output per man. Mining in the Minto area, however, was unsettled, as a result of price increases lessening demands, and the possible discontinuance of the Government subsidy on coal.

The peat moss industry, while operating at capacity, was being hindered by the lack of continuous sunshine which is essential in the drying process.

Manufacturing.—The production of steel at the Sydney Steel Plant had reached the highest peak in history during this period. Planing mills, woodworking plants, and pulp-mills were reported to be working at capacity. There was a shortage of textile workers and male trainee could be readily placed.

Employment was high in steel shipbuilding and repair yards in Nova Scotia. It was estimated that the labour force equalled if not exceeded that of the war years. With the exception of electric arc welders sufficient help was available.

Halifax shipyards were expecting to start work on three ships for the Argentine Government shortly and have contracted for the conversion and refitting of nine vessels for Acadia Overseas Freighters Ltd. to begin next spring. The Saint John Drydock, which had been very slack for some time, had received an order for repairs. About 400 men will be called in for a period of three to four months.

Depressed prices in the fishing industry, and increased costs had caused a number of the wooden shipbuilding yards to close.

Construction.—While commercial and war-time housing projects were showing marked progress, individual building had lagged. Outside of building undertaken by the Central Mortgage and Housing Corp., no building was being done for rental. Material shortages, the most important being cement, had held up the work at many points. Skilled carpenters were in short supply but general labour was plentiful.

It was expected that 300 workers would be required for the building of the Prince Edward Island ferry terminal. Some difficulty in obtaining men might arise as this work coincided with the potato harvest. The

lack of accommodation was hindering the employment of workers in the heavy construction program at Fredericton.

Highway and street construction, mostly grading and paving, was employing a great many men in all districts. Steel shortages, however, had eliminated any bridge building for this year leaving a heavy program for 1948.

Transportation.—Rail passenger traffic and bus services rose sharply during the month due to the heavy influx of tourists.

Quebec Region

In the Quebec Region progress was reported in all fields with manufacturing reaching the highest level of peace-time production. Construction was somewhat hampered by the increased cost of materials and labour while mining activity was limited by an acute shortage of workers.

Agriculture.—The crop situation had improved greatly during the fine weather and it appeared that an average yield could be expected. Haying was progressing with 40 per cent of the crop already stored while cereal and garden crops were maturing rapidly. Fruit development was good, an abundant crop of strawberries having already been harvested while orchards showed promise of heavy yields. Pasture lands throughout the province were excellent. An adequate supply of labour was available at most points.

Fishing.—Along the Gaspé Coast the price of cod had dropped from the wartime price of 7 cents per pound to 2½ and 3 cents per pound. This was making it unprofitable for fishermen to operate under the prevailing wage rates and men were returning to logging camps much earlier than last year.

Logging.—Logging operations were at a low ebb as most drives had been completed. However, it was estimated that at the end of the month 17,000 men were in the woods—some were hired for cutting while others were working on improvements and camp construction. It was expected that the demand for workers would be stepped up during August.

Mining.—There was much activity in mining areas although production was seriously retarded by the shortage of beginners, labourers and skilled workers. Considerable prospecting in new areas was being done both private concerns and the Provincial Department of Mines. Diamond drilling had started to taper off. Extensive development work was ready to be carried out—all of which called for additional help which was not forthcoming.

Among the producing mines, the labour situation was at a critical low as many miners were leaving temporarily for farm and woods operations during the summer. The situation was further aggravated by the increasing number of new producers coming into being. With the decided lack of workers for this work in the labour market, mine operators were looking to the revised immigration policy for some relief. It was estimated roughly that the Rouyn-Noranda district alone required 1,000 men for underground work. The gold mines in the Malartic District had reached an agreement with the Union covering a ten-cent increase for underground work. In an effort to overcome labour shortages, National Employment Service offices were making a special survey in the Montreal, Quebec, Three Rivers and Hull districts to recruit mine beginners.

Manufacturing.—The index of general manufacturing, which reached its peace-time high in June, registered a slight recession in July due to the large number of plants which closed for the summer vacation period.

Following a temporary quiet period, Montreal manufacturers of women's dresses were swinging into the full production of autumn styles. On the other hand, the Quebec footwear industry had slowed down as a direct result of cancellation of export orders. Many workers were acute with no real relief in sight part-time.

Meat packing houses were slack and were cutting hours so as to spread out the available work until the start of the fall killing.

Most of the small sawmills had completed their cut but larger mills would be busy until freeze-up.

Glass companies were working 24 hours a day, 7 days per week, in an effort to meet the shortage for this product. Reports stated that they had orders which would keep them busy for several months.

Shipbuilding was being carried out in Montreal, Sorel and Quebec with some 600 workers, particularly skilled tradesmen, in demand. This number would be increased

Construction.—The shortage of skilled workers were left idle while others were on although many apprentices were registered for training-on-the-job or in trade schools throughout the province. The industry, however, was moving forward despite some material shortages such as cement, electrical appliances, and plumbing fixtures. Revived activity in house building was noticeable, Central Mortgage and Housing being the chief instigator with contracts for 200 houses in Montreal and 60 houses in Sherbrooke.

Commercial building was moving forward with many large projects well under way. Outstanding among the new contracts which had been awarded was a \$3,000,000 addition to the plant of Dupuis Freres, Montreal, and a \$500,000 plant for the Singer Sewing Mfg. Co. Ltd., St. John. The C.P.R. Company had announced plans for a \$6,000,000 extension of a rail terminal at Cote St. Luc. Work on the railroad leading to the Hollinger Co. mining developments had been started.

Ontario Region

While many industries were experiencing a lull in employment due to vacation shut-downs and material shortages, the demand for farm help had increased. However, additional labour from the Prairie and Quebec regions had helped to harvest the crops. The arrival of 700 displaced persons from Europe eased the labour situation in Northern Ontario pulpwood camps.

Agriculture.—The demand for farm help had been very high despite the adverse weather during the early part of the month. The 1,000 Western harvesters who arrived fell far short of the 2,000 required and caused a serious situation. Experienced help was recruited in the poor-crop areas of Quebec and dispatched to districts where shortages were most acute.

Fall wheat was being threshed in some areas with a larger proportion being handled by combines. It was expected that the tobacco harvest would begin about August 12, and arrangements were being made for the movement of curers from the southern United States. The tomato crop had shown marked improvement in the last few weeks and promised to be heavy.

Logging.—Requests for pulpwood cutters had increased in preparation for the opening of camps. The importation of 1,400 displaced persons to work in Northern Ontario pulpwood camps should to some extent relieve the pressure.

River driving operations were completed except where logs were being brought long distances to the mills. A 25 per cent increase over the last year's cut was expected.

Mining.—The flow of workers to base metal mines was far below their needs despite the fact that wages for unskilled workers were the highest yet offered in the Province. A new shaft was being sunk at Sudbury the ore from which mine officials expected would feed a 500-ton mill.

Clearance orders for beginners in gold mines were meeting with little response. The Porcupine camp seemed to be the hardest hit and reported a shortage of about 500 men. The demand for diamond drillers and exploration crews had decreased as surface work had been reduced. Despite the many drawbacks, the current tonnage production in Ontario gold mines showed a slight increase over the last five months.

Manufacturing.—Due to the growing trend towards complete shutdown for vacation, industrial activity was curtailed during July. There was a noticeable increase in the flow of materials, an indication that improvement in supply lines may be expected.

Shipbuilding at Collingwood and Kingston had shown renewed activity as materials became available, and many workers were being rehired.

The iron and steel industry had been substantially assisted through the movement of workers from Nova Scotia while foundries were instituting training programs to augment the flow of labour.

In textiles, decentralized units were enabling large operators to meet their output requirements. The arrival of about 150 girls from the Maritimes had been of great assistance. Some tanneries were reducing the number of employees due to a slump in hide demand while manufacturers of leather products were cautious in expectation of lower hide prices. A slight improvement was seen in the rubber industry due to the recent wage increases.

It was reported that material supply in furniture plants had improved but skilled workers were still scarce. In the Hanover area over 500 furniture workers were on strike.

Food canning plants were busy with seasonal crops at all points and while the immediate needs for help were being met, it was expected that serious shortages would materialize in the fall.

An urgent appeal for chemical workers was made at Welland as turnover was unusually heavy among furnace tenders.

Construction.—Although there was some decrease in the number of residences under construction due to increased costs, the demand for tradesmen and labourers continued high. Work had started on wartime housing projects in Port Hope, Midland and Exeter while tenders had been called for projects in Trenton, Bradford, Guelph, Goderich and Walkerton. Industrial building showed less tendency to fall off and many large projects were being pushed

to completion. At Sarnia where considerable building was being undertaken, contracts had been awarded for two new industrial plants, one at a cost of \$1,000,000, and the other at \$750,000.

Transportation.—Orders for non-certificated men were being met but shipping companies were still reporting their need of experienced men. In some areas there was a slight demand for truck drivers, but as these were mostly for construction work where experience was required, the orders were difficult to fill.

Prairie Region

Agriculture was on the upgrade while woods operations were slowing down. Outside of coal mining and construction which were being hampered by the shortage of living accommodation, a sufficient supply of labour was available at most points.

Agriculture.—In the Fort Frances area, where farming was making great advances over former years, haying was in progress and reports stated that there was some shortage of experienced permanent and seasonal help. In Manitoba, vacancies have been mostly for haying and applicants had been in good supply. However, good farm hands on a monthly basis were not available. Farmers and workers were waiting for harvesting operations to get into full swing and day wages established. The Manitoba Federation of Agriculture had recommended wage rates of \$5 per day for stookers and \$6 per day for threshers. While some deterioration of grain crops had been experienced due to extremely hot weather, losses were relatively slight as compared to Saskatchewan and Alberta. Sugar beets had responded to the hot weather and to some extent had overcome the late start. Two of the Polish veteran camps in the sugar beet area had been broken up and the men dispersed to districts needing stookers and threshers until they are again required for the beet harvest about September 20.

There was a marked deterioration in crop prospects in the other two provinces, the most seriously affected points being in the vicinity of Prince Albert, North Battleford, Swift Current and Medicine Hat. Some of the farm help thus released had been transferred to Eastern Canada or were working in manufacturing.

It was expected that harvesting would begin simultaneously in the three provinces. If this occurred the need for labour from outside the region would be greater and the season shorter

than in a normal year when men can be moved from one district to another as the harvest progresses.

Logging.—In Northwestern Ontario there was the normal seasonal slowing down in woods operations and while employers were still placing orders for woodsmen they expected little success in obtaining help during the worst of the fly season. River drives were progressing normally and although labour turnover was high no real shortage had arisen. In the pulpwood camps of the Fort Frances area the river drives were nearly completed. Employers seemed to be well satisfied with the year's operations.

Mining.—Base metal mining reported continued activity and expansion in the Flin Flon and Fort Frances areas with heavy truck drivers and mine workers in short supply. The need will be intensified when university students return to school. Union officials and the mine management renewed their agreement providing for an all-round raise in wages effective August 1.

Precious metal mining had been hindered by the lack of suitable applicants, referrals being limited to inexperienced help. In the Kenora area, diamond drilling and exploration work was reported on the decline.

The demand for certificated coal miners and labourers was general throughout Alberta with the exception of the Medicine Hat area where mines were working at capacity. Arrangements were under way to obtain miners from the Maritimes for the Blairmore area where there was still accommodation for about one hundred more workers.

Normal activity was reported from existing oil and gas fields while the new workings at Leduc and Black Diamond were showing progress in the face of an acute scarcity of experienced help.

Manufacturing.—A slight upswing in livestock receipts was noted at various points. The rate will probably gain moderately until in the Fall there would be an unusually large influx due to poor crops and pasture in many areas. The Horse Co-operative Marketing Association was making trial shipments of frozen horse meat to Belgium. Creameries had reached the peak production without experiencing any scarcity of help. Output was beginning to fall off due to drought. The canning of fruit and vegetables had started and all requests for workers were being supplied.

Sawmills and planer mills were working full time and were fairly well manned. There was, however, a demand for experienced sawyers

and planer men. Generally, placements were high due to the improved wages and working conditions. Workers in the Edmonton district favoured waiting for harvest despite the fact that planer mills were offering 60 cents per hour to \$125 per month plus board. Operation of pulp and paper mills continued at near capacity.

The manufacture of construction materials such as paving mixtures, cement and cinder blocks, and bricks, was forging ahead to meet the heavy demand for these commodities. Additional heavy labourers were needed in steel works and rolling mills as plants were operating on a 24-hour basis.

Shipbuilding at Port Arthur was being hindered by a shortage of steel and the lack of foundry workers.

Construction.—The number of houses being built or planned was expected to be greater than the number estimated earlier in the season. It seemed likely that not all housing units would be finished on schedule because of scarcities of materials in some cases, and a shortage of skilled workers, particularly carpenters and bricklayers, in others. It was expected that there would be a definite slowing up in rural areas where many workers will leave for the harvest operations.

Industrial building was progressing satisfactorily although to some extent subject to the same hindrances. Road work was being held up by a scarcity of asphalt and road oils as well as a dearth of machine operators for heavy equipment.

Transportation.—Reports showed heavy activity due to the accumulation of large freight commitments. Inland water transportation on Lake Winnipeg was at its peak, and was using a number of fishing boats in addition to the regular fleet.

Railways were busy with a heavy movement of wheat to Churchill in preparation for the opening of shipping early in August. Some difficulty in hiring railway workers had materialized due to the comparatively low wages being offered.

Airlines and bus companies had increased their services to freight and passengers going to the Northern developments.

Daily unloading of cars at the Lakehead dwindled to 525 as against 670 in June. Terminal elevator operators were reluctant to forecast their Fall requirements until the harvest was nearer maturity.

Pacific Region

With all branches of industry showing a high level of seasonal activity, the demands upon the manpower resources were heavy.

However, job opportunities existed in practically all fields. The return of students to schools and colleges will intensify the shortage of workers, especially in mining and lumbering where a large number were being employed.

Agriculture.—A record crop of strawberries and raspberries had been successfully gathered and attention was being focussed on the fruit crop where picking was expected to begin shortly. At that time there appeared to be an abundant supply of transient labour to cover initial demands.

Labour orders for the hop harvest will approximate 6,000—some growers had already

registered about 50 per cent of their requirements. Pea threshing was at its peak in the Fraser Valley with no indication of a labour shortage.

Logging.—Currently, the weather was favourable for woods operations with intermittent showers removing the likelihood of fire hazards. Several forest areas which had been closed temporarily as a precautionary measure were reopened. Mainland and northern interior operators had successfully completed negotiations. Logging requirements were heavy with some easement forthcoming through clearance.

Mining.—The general situation in the mining industry was one of labour scarcity which was hampering development at most points. Training programs were making some contribution to the skilled labour pool but labour turnover, to a degree, nullified these attempts to increase and maintain a full working force.

The demand for skilled workers in coal fields continued with only minor progress being reported. The major base metal operators were maintaining a fairly complete staff while critical shortages were apparent in the gold mining section of the industry.

Smelter operators at Trail had launched a recruiting program throughout the region with satisfactory results. However, it was feared that when the students employed returned to their studies, operations would suffer unless immediate replacements were found.

Fishing.—Boats of the halibut fleet were converting to other types of fishing such as salmon and herring seining. Big salmon runs were expected in the Bella Coola and Bella Bella areas where seine fishing opened July 27. Spring salmon catches had been poor.

There was little activity in herring and pilchard fishing as the operators and fishermen were negotiating new terms. A good run of dog fish was reported while tunas were being caught in increasing numbers.

The annual herring catch for the West Coast area had been stabilized at 40,000 tons.

Manufacturing.—With the exception of the Prince Rupert Drydock, all shipbuilding yards were fully occupied with new ship construction and repairs. Wage discussions were under way in the major yards and it was expected that a settlement would soon be reached. There was a continued demand for experienced arc welders and carpenters.

The fruit packing plants and canneries in the Mission City area were operating at capacity on the new crop. Canada Packers Ltd. had purchased an unused plant at Chilliwack which will give employment to about a hundred local residents.

Activity was curtailed in the shingle plants as the workers were negotiating for higher wages.

Construction.—Improved weather and a slight easement of building materials had resulted in increased activity in large industrial projects while, on the other hand, residential construction was rapidly falling off. Skilled carpenters and members of the trowel trades were in short supply. Work on the Port Alberni pulpmill was nearing completion which would mean the release of about 350 workers. Prince George reported that 100 low rental houses were almost finished while at Kimberley 125 houses were in the final stage of construction with negotiations under way for an additional 50 to be built.

An extensive highway repair and construction program was being carried out at all points which was giving employment to many workers.

Prospects for a heavy long-term construction program were already taking shape. A Vancouver firm had announced its intention of erecting a two million dollar plywood factory while the Western Branch of the Pulp and Paper Association planned a twenty million dollar expansion program which would be spread over the next four years.

Transportation.—Coastal steamship lines were completely manned. Harbour activity was reported to be increasing with an estimate of 86 deep-sea ships scheduled for cargoes in August.

Wage Rates, Hours and Working Conditions in the Lumber and Lumber Products Industries, 1946

WAGE rates in each of three main divisions of this industry, namely, Sawmill Products, Planing Mill, Sash and Door and Wooden Furniture Industries, moved to substantially higher levels in 1946. This was part of the generally upward movement which followed the relaxation of controls after the war.

The index of wage rates for this group of industries based on average rates in 1939 as 100 was 104.4 for 1940; 117.7 for 1941; 131.0 for 1942; 142.9 for 1943; 148.2 for 1944; 156.1 for 1945; and 178.3 for 1946.

The information in this article on wages, hours and certain working conditions was obtained in the annual survey, 1946, of "Wage Rates and Hours of Labour in Canada".¹ The tables on wage rates contain comparative figures for 1945 which were obtained in the survey of that year.

In the 1946 survey, employers were asked to report their straight-time wage or salary rates or the average straight-time earnings

for workers on piecework during the last pay period prior to October 1, 1946. They also reported on certain other conditions of work,² such as, hours, overtime, vacations with pay, sick leave, Sunday work, and the numbers of workers under collective agreement in each establishment. The total number of workers in each establishment, including both plant and office staffs, was also obtained.

In the tables on wage rates, the averages shown are for selected representative occupations in each industry. They do not include the value of any allowance to employees such as free transportation, group insurance, sick benefits or other welfare plans. The ranges include approximately the middle 80 per cent of the workers in each occupation. The purpose of this is to exclude extremely high and low rates and at the same time to show the ranges which contain the rates for the majority of the workers. The averages, however, include the rates for all the workers in each occupation.

Sawmill Products Industry

Wage rates in the Sawmill Products Industry were about 17.3 per cent higher in 1946 than in the previous year and 84.8 per cent higher than in 1939. The increase during 1946 was the largest percentage advance recorded during the war and post-war period and followed two years of relative stability during which both prices and wages were under more rigid control. The movement of the index of wage rates in this industry is as follows:—

Year	Index
1939	100.0
1940	105.0
1941	115.0
1942	130.7
1943	143.8
1944	148.7
1945	157.5
1946	184.8

TABLE I.—DISTRIBUTION OF ESTABLISHMENTS AND EMPLOYEES IN THE SAWMILL PRODUCTS INDUSTRY, 1946

	Canada	Nova Scotia and New Brunswick	Quebec	Ontario	Prairie Provinces	British Columbia
Total Establishments.....	235	30	38	46	22	99
EMPLOYEES:						
Male.....	21,996	1,612	3,959	3,450	981	11,985
Female.....	560	8	76	86	25	365
Total.....	22,556	1,620	4,035	3,545	1,006	12,350

¹ Comparable information on the Rubber Products Industry and the Motor Vehicles Industry was published in the August issue of the Labour Gazette (p. 1164); on the Pulp and Paper Products Industry and the Brewery Products Industry in the July issue (p. 988); and on the Construction and Steam Railways Industries in the June issue (p. 890).

² Information on provincial legislation pertaining to annual vacations with pay, maximum hours of work and minimum wages is contained in an annual publication, "Provincial Labour Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages, and Workmen's Compensation", by the Legislation Branch of the Department of Labour.

The 235 establishments for which returns were received employed a total of about 22,500 workers of whom only 560 were female, mainly office workers (Table I). More than 50 per cent of the workers were

in British Columbia. The majority of the mills, about 75 per cent, employed fewer than 100 workers in each, the total employment being about one-third of the number in all of the mills covered in the survey. Two-

British Columbia.....	.72	.88	.83—.92

thirds of the workers were employed in the remaining 59 mills each of which reported a staff of more than 100.

Collective Agreements.—Fifty-six per cent of the workers in mills for which returns were received were included under collective agreements in 1946. The great majority of these were in British Columbia where employees of 75 of the 99 mills, which included 87 per cent of the workers in this industry in the province, were covered by agreement.

Five mills in Quebec and three in Ontario reported having collective agreements.

Wage Rates.—Average wage rates for 1945 and 1946 as well as ranges of rates in 1946 for selected occupations are shown by region in Table II. Increases in rates up to 15 cents per hour were quite common during

1946 particularly in British Columbia following a prolonged strike of wood workers in that Province in the spring of 1946.

Hours of Work.—Operations in the industry tend to be seasonal particularly in Eastern Canada and the normal hours of work reported are often longer than in other manufacturing industries. In British Columbia, however, where operations are less seasonal, the 44-hour week was almost universal in 1946, as shown in Table III, being reported from 91 of the 99 mills from which returns were received. Four of the remainder reported a standard week of 40 hours and three of 48 hours. In the Prairie Provinces, a standard week of 48 hours or less was reported from 9 of a total of 22 mills and in Ontario, from 12 of a total of 46 mills. In all other cases

(1) These establishments reported 9 hours work on Friday.

(2) These establishments reported 8 hours work on Friday.

in Canada, numbering 115 of a total of 235, the standard weekly hours exceeded 48 and in many were as high as 60 hours.

In British Columbia by far the most common daily hours were eight Monday to Friday and four hours on Saturday. In other regions throughout Canada the 9 and 10-hour days were most commonly reported, Monday to Saturday inclusive.

Twenty-four establishments reported a five-day week, 22 in British Columbia and two in Ontario. Eighteen of the British Columbia mills worked a 44-hour five-day week and the other four worked a 40-hour week; the two establishments in Ontario reported a standard week of five 10-hour days.

Overtime.—Straight time for overtime was the most common rate after daily hours in all regions except British Columbia where by far the most common rate was time and one-half, both after daily hours and on Sundays and holidays. In this Province the great majority of the workers in the industry are covered by agreements but in other provinces they are not. Double time rate for overtime was not prevalent, there being only six instances reported for Sunday and

holiday work. Returns from nearly one-third of the mills did not give any information on overtime rates presumably because no overtime was worked.

Vacations with Pay.—Table V shows vacations with pay as reported from 149 of the 235 mills covered in the 1946 survey of wages and hours. In the great majority of these, the initial vacation was one week after one year of service and in most cases did not exceed one week regardless of the length of service. In a considerable number, paid vacations of less than one week were provided for employees when the length of service was less than one year. Reports from 15 mills showed the initial vacation to be two weeks after one year of service. In 46 cases a maximum of two weeks was allowed; in 18 cases scattered throughout the various regions after one year of service and in 28 cases, 27 of which were in British Columbia, after five years of service.

Sick Leave with Pay.—Eight establishments in British Columbia, six in Ontario and three in Quebec reported some provision for pay during absence on account of illness. Of these, eleven grant it to salaried or office

TABLE IV.—OVERTIME FOR PLANT EMPLOYEES IN THE SAWMILL PRODUCTS INDUSTRY, BY ESTABLISHMENTS, 1946

NOTE.—Of the 235 establishments, one gives straight time plus 11 cents per hour extra after daily hours for Sunday and holiday work.

staff only, three stated that they have group insurance and the remaining three did not state the nature of the plan.

Shift Work.—Only nineteen establishments in the industry reported shift work on production operations in 1946 for approximately

1,600 workers on second or third shift. No wage differential was reported for about one-third of these workers. Two mills reported paying a three-cent differential to about 100 workers and eight mills a five-cent differential to 900 workers.

TABLE V.—VACATIONS WITH PAY FOR PLANT EMPLOYEES IN THE SAWMILL PRODUCTS INDUSTRY, BY ESTABLISHMENTS, 1946

NOTE.—Of 235 establishments surveyed, 86 do not give information on this subject. Under provincial legislation a worker in Quebec is entitled to a half-day for each calendar month of employment if he has worked less than a year, and in Saskatchewan, to one day for each month.

Planing Mill, Sash and Door Industry

Wage rates in the Planing Mill, Sash and Door Industry in 1946 were at levels averaging 61.2 per cent higher than in 1939 and slightly more than nine per cent higher than in 1945 according to the index number for this industry shown below. The increase in 1946 over the previous year was the largest recorded since 1939 with the exception of 1941 in which year the advance was 14.2 per cent.

The 191 establishments from which returns were received employed a total of about 9,500 workers in 1946, of whom slightly more than 500 were female (Table I). One hundred and sixty-nine of the establishments, 88 per cent of the total, employed fewer than 100 workers in each. The remaining 22 employed between 100 and 300 workers in each case with a total of 3,300 workers or about one-third of the number in all plants included in the survey.

Collective Agreements.—Twenty-three per cent of the workers in plants from which returns were obtained were under collective agreement. These were in effect in 34 establishments, of which more than half were in British Columbia.

Wage Rates.—Table II shows hourly wage rates for representative occupations in the industry in 1945 and 1946 with ranges of rates also for 1946. Hourly rates averaged higher in 1946 for each of the selected occupations in each region. Increases in British Columbia, averaging 12 to 16 cents per hour, were much greater than in other provinces following a strike of woodworkers throughout the industry in the spring of 1946. In the other provinces average increases of from three to five cents per hour were the most common.

Hours of Work.—Standard or normal hours of work ranged from 40 to 60 hours per week as shown in Table III. However, only one mill which is located in British Columbia reported 40 hours. The 44-hour week was the most common in Ontario, the Prairie

Provinces and British Columbia. In the latter province, 18 of the 19 mills from which returns were received reported the 44-hour week. The 48-hour week was reported from 25 mills, four in the Maritime Provinces, two in Quebec, 18 in Ontario and one in the Prairie Provinces. A 50-hour week was reported from 25 mills also, of which six were in the Maritime Provinces, six in Quebec and 12 in Ontario. A standard week of 55 hours was reported from 17 mills and between 55 and 60 hours from nine mills.

The eight-hour day from Monday to Friday was reported from about one-third of the mills including all in British Columbia, 14 in the Prairie Provinces, 26 in Ontario, two in Quebec, and seven in the Maritime Provinces. The next largest group reported

nine hours per day Monday to Friday, of which 26 were in Ontario, 12 in Quebec and 14 in the Maritime Provinces.

All but 12 of the mills reported Saturday work ranging from three hours to ten hours. Four hours was reported from 73 mills, 4½ hours from 22, five hours from 41, nine hours from 12 mills and ten hours from six.

Twelve establishments reported the five-day week, ten in Ontario, one in Quebec and one in British Columbia. The number of employees in these plants was about 700.

Sunday work reported by a few establishments was confined to maintenance and power crews.

Overtime.—As indicated in Table IV, overtime was paid at straight-time rates after daily hours in about one-quarter of the mills

⁽¹⁾ Includes one establishment paying time and one third and another time plus 10 cents per hour after daily hours and on Sunday and holidays.

⁽²⁾ Includes two establishments paying 10 and 15 cents per hour extra after weekly hours have been worked and another paying 13 cents per hour after weekly hours and on holidays.

⁽³⁾ Includes two establishments paying time and one quarter after weekly hours and two establishments paying this rate after daily hours; one other establishment pays time and one third after weekly hours.

covered in the survey, for Sunday work in about one-fifth, and on holidays in about one-quarter of the mills. Time and one-half was reported as the overtime rate after daily and weekly hours from about 20 per cent of the mills. Double time was not reported except for work on Sundays and holidays in a few cases. No information was received from many plants as to overtime rates particularly as to work on Sundays and holidays.

Vacations with Pay.—Table V gives information on vacations with pay as reported from 155 of the 191 plants included in the survey in 1946. The initial vacation was one week reported from 131 mills usually after one year of service, although in 11 plants one week was allowed for less than one year of service. Two weeks was the initial vacation reported from nine mills, after one year of service in six cases and for shorter

service in three cases. In the great majority the paid vacation reported did not exceed one week although in 21 plants the maximum vacation was two weeks.

Sick Leave with Pay.—Fifty-six establishments reported some provision for pay during absence on account of illness in 1946, although 27 of these allowed it to salaried or office employees only. Seven report group insurance schemes, ten report that they give sick leave with pay but do not explain their plan and the remainder reported that they grant this benefit in special cases only or to weekly paid and regular employees.

Shift Work.—Shift work was negligible in the industry in 1946 with only three establishments reporting a second shift on production work on which a total of 80 men were employed and for which no wage differential was given.

TABLE V.—VACATIONS WITH PAY FOR PLANT EMPLOYEES IN THE PLANING MILL,—SASH AND DOOR INDUSTRY, BY ESTABLISHMENTS, 1946

NOTE.—Of the 191 establishments analyzed, 36 give no information on vacation with pay. Under provincial legislation a worker in Quebec is entitled to a half-day for each calendar month of employment if he has worked less than a year, and in Saskatchewan, to one day for each month.

Wooden Furniture Industry

In 1946 the wage rate index for this industry increased 71·7 per cent above the 1939 base year as indicated in the following series. The advance over the previous year of 7·7 per cent was less than the percentage increase in 1941 and 1942 prior to the establishment of the ceiling on wages.

Year	Index
1939	100·0
1940	101·7
1941	125·0
1942	139·0
1943	147·6
1944	154·8
1945	159·5
1946	171·7

Of the 156 establishments from which returns were obtained in this industry, 81 per cent were in Central Canada with more than

Wage Rates.—Wage rates for 1945 and 1946 for selected occupations in the Furniture Industry are shown in Table II. Average rates in 1946 were usually two to eight cents per hour higher than in 1945. Most workers in the industry received between 60 and 80 cents per hour.

Hours of Work.—As shown in Table III, the standard weekly working hours ranged from 40 to 55 in practically all cases with the greatest number of establishments operating 47 hours. Fourteen of the 39 establishments in Quebec work 55 hours per week; more than half of the 87 firms in Ontario work 47 hours and all the establishments in British Columbia ranged from 40 to 44 hours. The most common daily hours, Monday to Friday, were 8½ with nine and eight next in importance. In the 106 establishments work-

one-half located in Ontario. As shown in Table I, nearly 12,000 workers were employed in the plants covered in this analysis. Only nine per cent were female workers. Nearly two-thirds of the workers were employed in plants in Ontario and about one-quarter in Quebec. Forty-seven per cent of the employees were in 120 smaller establishments of 100 workers or less while the remainder were employed in 36 establishments each employing between 100 and 500 workers.

Collective Agreements.—Employees of 59 of the 156 establishments were under some form of collective agreement. Forty-seven per cent of the employees in the industry were covered. Two thousand one hundred employees in 25 Quebec establishments; 2,900 workers in 29 establishments in Ontario and 500 workers in five establishments in British Columbia, were reported to be under collective agreements.

ing on Saturday, the predominant hours were 4½ and four.

Approximately 3,800 employees in 50 establishments were on a five-day week at the time of the 1946 survey; 29 of these were located in Ontario, 11 in British Columbia, nine in Quebec and one in Alberta.

Thirty-three establishments reported Sunday work but this applied to very few employees, probably watchmen or maintenance workers.

Overtime, Table IV.—The most common rate for overtime in the industry was time and one-half with 68 establishments, in which total employment was 7,300, paying this rate Monday to Friday, 64 for Saturday overtime and 25 only after normal weekly hours have been worked. A considerable number of firms did not give information on overtime, particularly for Sundays and holidays.

Vacations with Pay, Table V.—Vacations with pay are provided by law in a number of provinces. Of the provinces covered in this survey, Quebec, Ontario, Alberta and British Columbia workers are entitled to holidays with pay after one year of service. In Quebec provision is made for paid holidays when the length of service is less than one year. A number of establishments reported more generous provisions than were required under the legislation. Eighteen reported one week's holidays even though the length of

service was less than one year. Five reported two weeks after one year of service. In 134 establishments the paid vacation did not exceed one week and in 15 others did not exceed two weeks. Returns from seven plants did not give information under this heading.

Sick Leave with Pay.—Of the 156 establishments from which returns were received, 34 report some provision for sick leave with pay, 14 of these granting it only to salaried or office workers. Thirteen establishments make provision through group insurance schemes.

Production or Incentive Bonuses.—Production or incentive bonuses were reported by eight establishments and were based either on a time study of the job or on the efficiency standard of the individual. They were paid in four cases on the production of the individual alone while in the other four establishments the individual's efficiency was related to that of a group, department or entire production staff.

Shift Work.—There is very little shift work in this industry, nine establishments reporting a total of 156 men on production work on second or third shifts. Four of these do not pay any differential for shift work. Of the remainder, three are on a two-shift basis and pay a differential of five cents per hour for the second shift. Two plants on a three-shift basis report a differential of five cents per hour on the third shift only.

Total Establishments	28	115	6	134	15
		149		149	

(1) These establishments report one-half day for each month of service.

(2) Eight of these establishments require no specified service but pay for vacations at the rate of 2 per cent of annual earnings; seven allow one-half day per month; one pays for vacation at the rate of 2 per cent of earnings after three months and another grants one-half week after six months of service.

Strikes and Lockouts in Canada during August, 1947

THE time loss due to strike activity in Canada during August was more than double that recorded for July, but was much less than in August, 1946, one of the peak months of last year. The demand for increased wages continues to be the principal cause in the majority of the strikes. Preliminary figures for August, 1947, show 36 strikes and lockouts

in existence, involving 7,184 workers, with a time loss of 52,314 man-working days, as compared with 29 strikes in July, 1947, with 3,112 workers involved and a time loss of 24,355 days. In August, 1946, there were 46 strikes, involving 42,506 workers, with a time loss of 870,694 days.

*Preliminary figures.

‡ Strikes terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

For the first eight months of 1947 preliminary figures show a total of 146 strikes and lockouts, involving 52,823 workers, with a time loss of 1,578,604 man-working days. During this period more than 80 per cent of the time loss was due to strikes of coal miners in the Maritimes. For the same period last year there were 180 strikes and lockouts, involving 127,417 workers, with a time loss of 3,409,350 days.

Of the 36 strikes recorded for August, six were settled in favour of the workers, two in favour of the employers, four were compromise settlements, and six were indefinite in result, work being resumed pending final

settlement. At the end of the month 18 strikes were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of composers, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., which commenced on May 30, 1946, are still continuing. A strike of food products factory workers at Vancouver, B.C., has not been declared terminated.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1947⁽¹⁾

Industry, Occupation and Locality	Number Involved		Time Loss in Man-Working Days	Particulars ⁽²⁾

⁽¹⁾Preliminary data based where possible on direct reports from parties concerned; in some cases incomplete; subject to revision for the annual review.

⁽²⁾In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

⁽³⁾ 101 indirectly affected; ⁽⁴⁾ 123 indirectly affected; ⁽⁵⁾ 33 indirectly affected; ⁽⁶⁾ 177 indirectly affected; ⁽⁷⁾ 15 indirectly affected.

Strikes and Lockouts in Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing up to date that given in the March, 1947, issue in the review "Strikes and Lockouts in Canada and Other Countries." The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the countries for which such figures are available. Statistics given in the annual review in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in June, 1947, was 151 and 18 were still in progress from the previous month, making a total of 169 during the month. In all stoppages of work in progress in the period there were 59,100 workers involved and a time loss of 210,000 working days was caused.

Of the 151 stoppages which began during June, 17 arose out of demands for advances in wages; 59 over other wage questions; 10 on questions as to working hours; 23 on questions respecting the employment of particular classes or persons; 38 on other questions respecting working arrangements; one was on a question of trade union principle; and three were in support of workers involved in other disputes.

For the year 1946, the number of industrial disputes involving stoppages of work was 2,205.

There were 526,000 workers involved, with a time loss of 2,160,000 working days.

United States

Preliminary figures for July, 1947, show 300 strikes and lockouts beginning in the month, in which 500,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 4,200,000 man days. Corresponding figures for June, 1947, are 350 strikes and lockouts, involving 475,000 workers with a time loss of 3,750,000 days.

Sales and Financing of Motor Vehicles in 1946

SALES of new motor vehicles rose sharply in 1946 to approach the pre-war level, when a total of 120,044 new passenger and commercial vehicles retailed for \$193,329,005, according to the Dominion Bureau of Statistics. The total number of vehicles sold was surpassed only in the years, 1937, 1938 and 1940. The peak year was 1937 when 144,441 new vehicles were sold for \$149,170,527. Retail value of the sales made in 1946, however, was far in excess of that for the larger number of vehicles sold in 1937.
